1. Summary

National Environmental Services (NES) conducted a Phase I ESA for a site located at 16207 Gale Avenue, City of Industry, Los Angeles County, California in accordance with the generally accepted ESA industry standard ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The scope of work included: an inspection of the site for environmental concerns, a review of environmental databases and other governmental records, a review of available historical documents (including aerial photographs, fire insurance maps, and topographic maps), interviews with the owner, and the preparation of this report.

Site Description:

National Environmental Services (NES) was retained to perform a Phase I Environmental Site Assessment (ASTM E1527-21) on an improved tract of land that contains approximately 1.06 acres of land located generally along the northeasterly right-of-way line of Gale Avenue, and the southeasterly right-of-way line and northerly terminus of Ward Way, approximately 300 feet to the northeast of the intersection of said roadways, in the City of Industry, Los Angeles County, California. The subject site consists of 1.06 acres of land legally described as: Lot 2, Rancho La Puente Subdivision, Partition of Lands of Charlotte M. Rowland, Los Angeles County, California. Its APN is 8242-016-044. The subject site is geographically located at latitude 34.0090790 and longitude 117.9528950. Its physical address is 16207 Gale Avenue, City of Industry, California. According to Assessor records, the subject site currently owned by Trinh, LLC.

NES was authorized to conduct the ESA by Grace Yoo from East West Bank. The property was inspected on October 26, 2022, by NES Environmental Subconsultant Hartley Beeks.

The site under consideration in this project or the designated property in review consists of approximately 1.06 acres of land that is improved with a light industrial building totaling 19,896 square feet of building area and asphalt paved parking areas and driveways.

As of the date of the site inspection, the subject site was partly used for storage/warehousing. The balance of the subject site was not occupied.

The current improvements on site were erected in 1962. The building on the property in review is a steel frame structure with concrete tilt exterior walls. It sits on a reinforced concrete slab foundations. On the interior, the building on the property in review consists of office and storage/warehouse areas. The floors consist of a concrete base or are covered with floor tiles or carpeting. The walls consist of lightly textured and painted sheetrock. The ceilings in the built out areas are suspended and built out with fiberglass and cellulose ceiling tiles.

All exterior areas surrounding the structure on the property are paved with concrete, asphalt or are landscaped. All of the vegetation appeared to be healthy and absent of discoloration.

NES noted the presence of regulated materials and hazardous materials at the subject, the presence and use of such is not deemed to constitute an environmental concern.

No recognized environmental conditions were discovered. No evidence of acutely hazardous chemical storage problems, waste disposal concerns, leaking transformers, deteriorating lead based paint, sumps, pits, catch basins, surface impoundments, landfill activities, bodies of water, unusual odors, oil or gas wells, aboveground storage tanks, or other environmental conditions was observed on the property in review. There was no physical or visual evidence of stressed vegetation, soil discoloration, odors, or other indicators of environmental exposure to the surface areas or soils on the subject property.

Surrounding Uses:

To the northeast of the subject site are a manufacturing facility; LexJet Distribution Center. To the southeast are general commercial, and light industrial uses. To the southwest are an electrical supply store; LC Electrical and Lighting, and general commercial and light industrial uses. Further to the southwest is Gale Avenue. To the northwest is Ward Way, across from which are a diesel engine repair facility; DPS Diesel Parts and Service, and general commercial and light industrial uses.

The subject site is essentially surrounded by general commercial, light industrial, and industrial park uses. The operations on the surrounding properties will by their very location and nature involve some level of activity relating to hazardous or regulated materials. That is the business of the area. It is not within the scope of this survey to determine if the surrounding properties utilized or deposited any acutely hazardous substances in the area. The determination of that event is within the purview of the regulatory data included in this report.

Site Layout:

Standard Historical Records Review:

The "standard" historical records review included aerial photographs, fire insurance maps (Sanborn maps), local street directories (city directory search), topographic maps, building department records, interviews, property tax files, and zoning/land use records, if available or obtainable by the environmental professional.

The "standard" historical records review includes an evaluation of the past and current uses of adjoining properties.

A historical aerial photograph search was conducted on the subject property. The aerial photographs obtained are from 1928, 1938, 1947, 1952, 1964, 1970, 1977, 1981, 1983, 1990, 1994, 2002, 2005, 2009, 2012 and 2016. The aerial photographs were reviewed for visual evidence of past land usage that could have adversely impacted the subject site or properties surrounding the site. The aerial photograph review is primarily applicable for general site use chronology. Most of the aerials reviewed are not of large enough scale or of sufficient clarity to depict site-specific conditions. In the photographs from 1928 to 1952, the subject consisted of agricultural land as rows of crops were visible at the subject site. In the photos from 1964 to 2016, the subject site consisted of the current improvements. No significant changes were noted at the subject site.

A historical topographic map search was conducted on the subject property to evaluate potential liability on the target property and its surrounding area, resulting from past activities. A topographic map is a color-coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topographic maps show the shape, elevation, and development of the terrain in precise detail by using contour lines and color-coded symbols. The historical topographic maps obtained are from 1894, 1897, 1898, 1901, 1902, 1904, 1927, 1935, 1942, 1950, 1952, 1964, 1972, 1974, 1981, 2012, 2015, and 2018. No potential environmental issues like pits, landfills or oil/gas wells were noted on the subject site.

A review of the available historical city directories was also conducted for the subject property to evaluate the present and past land uses, structures, improvements, and the historical development of the subject site and surrounding properties. During the search, business directories including city, cross-reference, and telephone directories were reviewed, if available. “No Return” was listed as an occupant at the subject site 1971. No other listings were found for the subject site address.

NES attempted to obtain historical Fire Insurance maps on the subject property to evaluate present and past land uses, structures, improvements, and historical development of the subject site and surrounding properties. The fire insurance maps were not available for the subject property.

Previous Reports:

No previous Phase I ESA was provided to NES for its review.

Environmental Database Review:

EDR, a third party database company, provided information from State and Federal governmental agencies (directly or through secondary sources). A review of the EDR Report was conducted to identify past and present land use activities that could impact the subject site. A summary of pertinent information on the subject property and its surrounding area (provided by EDR) is given below. GEG requested that EDR provide information using the approximate minimum search distance set forth in ASTM E1527-21.

The date of the environmental database report is October 27, 2022.

Subject Site:

The subject site was listed in two of the databases searched by EDR. Hal Riger was listed in the HAZNET and HWTS databases. The listings are not deemed to constitute an environmental risk to the subject site.

HAZNET: Facility and Manifest Data. Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

HWTS: Hazardous Waste Tracking System. DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Subject Site and Surrounding Properties:

Based on the database review, one NPL site was located within a mile radius from the subject site. It is known as San Gabriel Valley (Area 4). The San Gabriel Valley (Area 4) site is a five-square-mile area of contaminated groundwater in Los Angeles, California. It is one of four Superfund sites in the 170-square-mile San Gabriel Valley. Multiple potentially responsible parties (PRPs) contaminated over 30 square miles of groundwater under the Valley with volatile organic compounds (VOCs). About 400 facilities in the region have soil contamination. Remedial design and cleanup activities are ongoing. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

SEMS (Superfund Enterprise Management System): SEMS tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. Based on the environmental database review, one SEMS registered facility was found within a half of a mile radius from the subject site. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

Based on the environmental database review, two RCRA-LQG, six RCRA-SQG and 17 RCRA-NLR registered facilities were found within a quarter of a mile radius from the subject site. The RCRA NLR list contains all previously registered hazardous waste generators that are no longer actively reporting to the EPA, either temporarily or permanently. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

According to the database review, five registered aboveground storage tank (AST) sites were found within a quarter of a mile radius from the subject property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

According to the database review, seven UST (Underground Storage Tank), seven SWEEPS UST, seven Historical UST, four CERS Tanks, and four CA FID UST sites were found within a quarter of a mile radius from the subject site. SWEEPS (Statewide Environmental Evaluation and Planning System) is the underground storage tank listing, updated and maintained by a company contacted by the SWRCB in the early 1980s. HIST UST is a Historical UST Registered Database. CA FID is the Facility Inventory Database that contains active and inactive underground storage tank locations. The source of this information is from the State Water Resource Control Board. The CERS (California Environmental Reporting System) Tanks is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System. According to the environmental database review, eleven registered LUST (Leaking Underground Storage Tank) facilities were found within a half of a mile radius from the subject property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

California Regional Water Quality Control Board's SLIC (spills, leaks, investigation, and cleanups) records contain any sites that impact groundwater or have the potential to impact groundwater. A review of California SLIC lists revealed the presence of four SLIC sites within a quarter of a mile radius from the subject site. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The California Voluntary Cleanup Program was established to provide administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in California. A review of the VCP list, provided by EDR, revealed the presence of one VCP site within approximately half a mile from the target property. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The CERS HAZ WASTE is the listing of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs. According to the database review, eight CERS HAZ WASTE sites were found within a quarter of a mile radius of the subject site. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL), State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. A review of the ENVIROSTOR list, as provided by EDR, has revealed that there are six ENVIROSTOR site within approximately a mile of the target property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

A review of the CORTESE and Historical CORTESE list, as provided by EDR, has revealed that there are nine CORTESE and nine Historical CORTESE sites within approximately half of a mile of the target property. This database identifies public drinking water wells with detectable level of contamination, hazardous substance site selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is California Environmental Protection Agency/Office of Emergency Information. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

Based on the environmental database review, one Engineering Control site was found within a half a mile radius from the subject property. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The following were also found in the databases: AOCONCERN; one site, ROD; one site, PRP; one site, ICIS; one site, FINDS; one site, Drycleaners; two sites, HAZNET; one site, HWP; one site, ECHO; one site, WIP; 18 sites, and HWTS; one site. The listings were not deemed to constitute an environmental concern to the subject site.

NES has reviewed the unmapped sites in the database (four sites) and none of the sites or uses listed appear to have been located at the subject site or within the recommended search distance from the subject site.

Vapor Intrusion:

NES has performed a Vapor Intrusion Assessment in conformance with the scope and limitations of the Standard Practice E 2600-10 on the property located at 16207 Gale Avenue, City of Industry, Los Angeles County, California. In the professional opinion of NES, an appropriate level of assessment has been conducted consistent with good commercial and customary practice in an effort to minimize liability, and no significant evidence or indication of potential vapor intrusion conditions (pVIC) or vapor intrusion conditions (VIC) has been revealed and vapor intrusion is unlikely to be an issue of concern in connection with existing or planned structures on the target property.

File Review:

Per the ASTM E1527-21 standards, if a subject site is listed on any database as having a violation, spill, leak incident, leaking underground storage tank system or is listed as a voluntary cleanup site, the Environmental Professional shall conduct research directly with the regulatory agency regarding such and report the findings in the Phase I ESA report. Given that the subject site was not listed as such in any of the regulatory databases listed in the EDR database report, no further research was deemed necessary.

Interviews/Questionnaires:

The user questionnaire was completed by Damon Lao at DPAH LLC. It is dated October 24, 2022. The pre-survey questionnaire was completed by Frank Trinh, The Trinh, LLC, the owner of the subject site for the past 13 years. It is dated October 20, 2022. Mr. Trinh stated that the subject site has been rented as an auto parts and tent parts warehouse facility. He also stated that the subject site was occupied by a CNC machine shop from 2009 to 2020 and by stainless steel commercial appliance manufacturer from 1970 to 2009. No additional items of environmental significance were reported in the questionnaires.

Findings, Discussion, Opinion:

The subject site was listed in two of the databases searched by EDR. Hal Riger was listed in the HAZNET and HWTS databases. The listings are not deemed to constitute an environmental risk to the subject site.

The subject site was developed with the current light industrial improvements in 1962. Prior to that, the subject site consisted of agricultural uses. Based on the regulatory file search, no violations or spills were recorded at the subject site. Based on the absence of evidence of any documentation relating to violations or spills or leaks at the subject site and the absence of any visible evidence of the misuse or mismanagement of the subject facilities, the previous and present uses of the subject site were not deemed to constitute an environmental concern at this time.

No on-site recognized environmental conditions were identified during the course of this Phase I ESA.

No controlled recognized environmental conditions were identified during the course of this Phase I ESA.

No historical recognized environmental conditions were identified during the course of this Phase I ESA.

It is unlikely that listed surrounding sites could have adversely impacted the subject site due to their proximity to the site, status, or to the nature of the event that had transpired. No off-site recognized environmental conditions were identified that were likely to impact the subject property.

Data Gaps:

A data failure is a failure to achieve historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. A data gap is a lack or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A significant data gap is one that "affects the ability of the environmental professional to identify a recognized environmental condition." No data gaps were encountered that affected the ability of the EP to identify recognized environmental conditions.

Conclusions/Recommendations:

NES has performed a Phase I ESA in conformance with the scope and limitations of the Standard Practice E1527-21 on the property located at 16207 Gale Avenue, City of Industry, Los Angeles County, California. In the professional opinion of NES, an appropriate level of inquiry has been made into the previous ownership and use of the property consistent with good commercial and customary practice in an effort to minimize liability, and no evidence or indication of recognized environmental conditions, historical recognized environmental conditions or controlled recognized environmental conditions has been revealed. No data gaps were encountered that affected the ability of the EP to identify recognized environmental conditions. No further assessment is deemed necessary at this time.

2. Introduction

2.1 Project Authorization

Grace Yoo at East West Bank, requested that NES perform a Phase I ESA for a site located at 16207 Gale Avenue, City of Industry, Los Angeles County, California. This report was prepared by Chloe Gabriel, Environmental Consultant, and reviewed by Salamat Ullah, Environmental Professional, and Hani Gabriel, Environmental Professional. This report is prepared for the attention of: **East West Bank.**

2.2 Purpose

The purpose of this Phase I ESA was to gather information regarding recognized environmental conditions pertaining to the subject site. The investigation was conducted and the report was prepared within the scope and limitations of the guidelines in ASTM E1527-21, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The purpose of this standard is to define good commercial and customary practice in the United States for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. This practice permits a user to satisfy one of the requirements to qualify the user for the innocent landowner, contiguous property owner, or prospective purchaser limitations on CERCLA liability. The practice constitutes all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice. The goal of the processes established by this practice is to identify recognized environmental conditions.

Recognized Environmental Condition (REC) definition: a REC means (1) the presence of hazardous substances or petroleum due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products due to a likely release to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to the environment.

Historical Recognized Environmental Condition" definition: "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls. Before labeling the past release an HREC, the Environmental Professional must determine whether the past release is a REC at the time the Phase I ESA is conducted. If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC."

Controlled Recognized Environmental Condition (CREC) definition: a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The report includes the environmental professional's rationale for any CREC conclusion.

A release is defined as any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles containing any hazardous substance, pollutant, or contaminant.

In conjunction with the subject site, a facility is defined as any building, structure, installation, equipment, pipe or pipeline, well, pit, pond, lagoon, impoundment, ditch, landfill, storage container, motor vehicle, rolling stock, or aircraft or any site or area where a hazardous substance has been deposited, stored, disposed of, or placed, or otherwise come to be located, but does not include any consumer product in consumer use or any vessel.

Owner or operator is defined as any person owning or operating a facility or the person who owned, operated, or otherwise controlled activities at a facility immediately prior to such facility's transfer to a unit of state or local government due to bankruptcy, foreclosure, tax delinquency, abandonment or similar means. Owner or operator does not include a person, who, without participating in the management of a facility, holds indicia of ownership primarily to protect his security interest in the facility (secured creditor exemption).

Certain elements must be established by a plaintiff before a defendant may be found liable under CERCLA for response costs at a site. Assuming all the elements of liability exist, a party may still avoid CERCLA liability by meeting one of the so-called affirmative defenses. They provide that a party shall not be liable if it can establish by a preponderance of the evidence that the release or threat of release of a hazardous substance and the damages resulting therefore were caused solely by: an act of God, an act of war, or the third party defense, which includes the innocent landowner defense. All appropriate inquiry must be undertaken by the defendant to establish that the defendant did not know and had no reason to know of hazardous substances in regard to the subject property.

It entails independent investigations by environmental professionals of key issues or facts related to potential environmental liabilities associated with the property transaction. It is an investigation of the real property conducted in order to determine or discover the obviousness of the presence or likely presence of a release or threatened release of hazardous substances on the real property and adjacent properties.

Emerging Contaminants: Substances that may pose a risk to human health or the environment but are not currently defined as hazardous substances under CERCLA (often referred to as "emerging contaminants") are not covered under ASTM 1527-21 Standard for Phase I ESAs. Emerging contaminants will become subject to Phase I ESA review once they are classified as hazardous substances under CERCLA. Prior to that, it may be prudent that a purchaser discuss the risks and benefits of including certain emerging contaminants under the scope of the Phase I ESA (e.g., PFAS) with the environmental professional and/or environmental counsel.

2.3 Scope of Services

National Environmental Services, Inc. (NES) scope of services included the following: a review of reasonably ascertainable records (information that is publicly available, obtainable within reasonable time and cost constraints, and practically reviewable) from ASTM standard sources and written inquiries regarding the site, site reconnaissance, interviews (via telephone or in person), and preparation of this report detailing findings, opinions, and conclusions. The items listed below were not considered part of the scope of work for this Phase I ESA: subsurface exploration, air, soil or groundwater sampling, asbestos-containing building materials, lead-based paint, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, ecological resources, endangered species, health and safety, industrial hygiene, indoor air quality, biological agents, mold, or controlled substances.

2.4 Significant Assumptions

This ESA is subject to the accuracy of information reviewed and to the limitations of the personal recollections of persons interviewed. NES cannot and does not warrant or guarantee that information provided by other sources is accurate or complete. Per E1527-21, an environmental professional may rely on information provided unless he or she has actual knowledge that certain information is incorrect.

2.5 Limitations and Exceptions

The conclusions included in this report are intended to assist the user in evaluating potential environmental risks associated with real estate transactions.

The visual inspection was not limited due to weather concerns or dense vegetation.

NES does not represent that the site referred to herein contains hazardous or toxic substances or other latent conditions beyond those observed during the site assessment. NES does not assume responsibility for the discovery of any special resources, nor does it assume responsibility for the elimination of hazards or adverse conditions that may cause accidents, injuries, damage, client liabilities, or environmentally adverse conditions. NES assumes no responsibility if hidden environmental conditions are discovered.

The conclusions in this report are based on the findings of the Phase I investigation described herein. Such an assessment can never absolutely conclude that a site does not contain hazardous materials inside structures, on its surface, or in its subsurface or that any such materials have not impacted the condition of the site. As long as the assessment is conducted properly and all due considerations are made, a degree of assurance can be achieved. The degree of assurance is determined by the amount of available information, scope of the assessment, and complexity of analyses performed. An absolute warranty can never be expressed or implied that no environmental liabilities exist on the site.

The professional opinions expressed herein do not represent scientific certainties. All recommendations, findings, and conclusions stated in the report are based upon conditions, operations, and practices (facts and circumstances) as observed at the time that this report was prepared (e.g. federal, state, local law, rules, regulations, and other matters that NES deemed relevant). A change in any fact or circumstances upon which this report is based may adversely affect the recommendations, findings, and conclusions presented in it.

The information obtained in the preparation of this report is not all inclusive and should not be construed as such but provides reasonable ascertainable and practically reviewable information regarding this project. A normal standard of care has been taken in compiling this report. NES is not responsible for any errors, omissions, or inaccuracies in reasonable ascertainable information or undisclosed environmental conditions.

The conclusions in this report are based on current environmental regulations as of the date of this report.

2.6 Special Terms and Conditions

A contract between the client and NES is attached at the end of this report. Any special terms and conditions are set forth in this contract.

2.7 User Reliance

This report is prepared for the sole and exclusive use of NES' clients and their representatives and may not be dispersed, disclosed to, or relied upon, in whole or in part, by any other persons or entities without the prior written consent of NES.

2.8 Conflict Certification

National Environmental Services (NES) has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Environmental Assessment Report; and NES has no personal interest with respect to the subject matter of the Environmental Assessment Report or the parties involved and NES has no relationship with the property or the owners thereof which would prevent an independent analysis of the environmental or other conditions of the property.

3. **Site Description**

3.1 Location and Legal Description

National Environmental Services (NES) was retained to perform a Phase I Environmental Site Assessment (ASTM E1527-21) on an improved tract of land that contains approximately 1.06 acres of land located generally along the northeasterly right-of-way line of Gale Avenue, and the southeasterly right-of-way line and northerly terminus of Ward Way, approximately 300 feet to the northeast of the intersection of said roadways, in the City of Industry, Los Angeles County, California. The subject site consists of 1.06 acres of land legally described as: Lot 2, Rancho La Puente Subdivision, Partition of Lands of Charlotte M. Rowland, Los Angeles County, California. Its APN is 8242-016-044. The subject site is geographically located at latitude 34.0090790 and longitude 117.9528950. Its physical address is 16207 Gale Avenue, City of Industry, California. According to Assessor records, the subject site currently owned by Trinh, LLC.

3.2 Site and Vicinity General Characteristics

The site under consideration in this project or the designated property in review consists of approximately 1.06 acres of land that is improved with a light industrial building totaling 19,896 square feet of building area and asphalt paved parking areas and driveways.

3.3 Current Use of the Property

As of the date of the site inspection, the subject site was partly used for storage/warehousing. The balance of the subject site was not occupied.

3.4 Descriptions of Structures, Roads, and Other Improvements on the Site

The current improvements on site were erected in 1962. The building on the property in review is a steel frame structure with concrete tilt exterior walls. It sits on a reinforced concrete slab foundations. On the interior, the building on the property in review consists of office and storage/warehouse areas. The floors consist of a concrete base or are covered with floor tiles or carpeting. The walls consist of lightly textured and painted sheetrock. The ceilings in the built out areas are suspended and built out with fiberglass and cellulose ceiling tiles.
All exterior areas surrounding the structure on the property are paved with concrete, asphalt or are landscaped. All of the vegetation appeared to be healthy and absent of discoloration.

3.5 Site Utilities

The City of City of Industry supplies water and sanitary sewage facilities for the general area where the subject site is located. Electricity and gas are provided by private entities.

3.6 Current Uses of Adjoining Properties

NES personnel viewed adjoining properties from the perimeter of the subject site and used drive-by reconnaissance to help assess conditions of adjoining and surrounding properties.

To the northeast of the subject site are a manufacturing facility; LexJet Distribution Center. To the southeast are general commercial, and light industrial uses. To the southwest are an electrical supply store; LC Electrical and Lighting, and general commercial and light industrial uses. Further to the southwest is Gale Avenue. To the northwest is Ward Way, across from which are a diesel engine repair facility; DPS Diesel Parts and Service, and general commercial and light industrial uses.

The subject site is essentially surrounded by general commercial, light industrial, and industrial park uses. The operations on the surrounding properties will by their very location and nature involve some level of activity relating to hazardous or regulated materials. That is the business of the area. It is not within the scope of this survey to determine if the surrounding properties utilized or deposited any acutely hazardous substances in the area. The determination of that event is within the purview of the regulatory data included in this report.

4. User Provided Information

4.1 Title Records

A historical chain-of-title search was not within the scope-of-work to be provided by NES. A title search was not available and was not provided to NES by the client before this report was completed.

4.2 Environmental Liens and Activity and Use Limitations

Activity and use limitations are legal or physical restrictions or limitations of the use of, or access to, a site or facility. They are used to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property or to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property. AULs indicate that residual levels of hazardous substances or petroleum products may be present on a property. Environmental lien and AUL searches are not performed by the environmental professional (unless specifically contracted for in the engagement and when deemed necessary). The environmental professional's search of institutional and engineering control databases do not meet the intent of the rule, the environmental professional must review (1) transaction-related title insurance documentation such as preliminary title reports and title commitments; or (2) title search information reports from third party vendors provided that the reports meet certain specifications. No activity and use limitations were identified in the databases searched and listed in the EDR Report.

4.3 Reason for Performing the Phase I ESA

The Phase I is being prepared to identify any recognized environmental conditions, to identify any potential environmental conditions that could materially impact the operation of his future business, and to satisfy one of the requirements to qualify for one of the landowner liability protections (a defense to CERCLA liability).

4.4 Prior Environmental Reports

NES is not aware of any prior environmental reports conducted on the subject property.

5. Records Review

5.1 Standard Environmental Record Sources

EDR, a third party database company, provided information from State and Federal governmental agencies (directly or through secondary sources). A review of the EDR Report was conducted to identify past and present land use activities that could impact the subject site. A summary of pertinent information on the subject property and its surrounding area (provided by EDR) is given below. GEG requested that EDR provide information using the approximate minimum search distance set forth in ASTM E1527-21.

The date of the environmental database report is October 27, 2022.

The subject site was listed in two of the databases searched by EDR. Hal Riger was listed in the HAZNET and HWTS databases. The listings are not deemed to constitute an environmental risk to the subject site.

HAZNET: Facility and Manifest Data. Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

HWTS: Hazardous Waste Tracking System. DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

NES has reviewed the unmapped sites in the database (four sites) and none of the sites or uses listed appear to have been located at the subject site or within the recommended search distance from the subject site.

5.1.1 Superfund Enterprise Management System:

SEMS (Superfund Enterprise Management System): SEMS tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL. Based on the environmental database review, one SEMS registered facility was found within a half of a mile radius from the subject site. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site. No SEMS-Archive facilities were found within a half of a mile radius from the subject site.

5.1.2 National Priorities List (NPL) Sites:

The National Priority List (NPL) identifies those sites that are currently involved in CERCLA or Superfund actions related to abandoned or inactive hazardous wastes. It is compiled from the designated CERCLIS list. NPL sites are prioritized as to their significant risk to human health and the environment. This list targets those sites to receive remedial funding under CERCLA. The NPL lists the nation's highest priority sites for remedial action. Only NPL sites can receive CERCLA funding. Based on the database review, one NPL site was located within a mile radius from the subject site. It is known as San Gabriel Valley (Area 4). The San Gabriel Valley (Area 4) site is a five-square-mile area of contaminated groundwater in Los Angeles, California. It is one of four Superfund sites in the 170-square-mile San Gabriel Valley. Multiple potentially responsible parties (PRPs) contaminated over 30 square miles of groundwater under the Valley with volatile organic compounds (VOCs). About 400 facilities in the region have soil contamination. Remedial design and cleanup activities are ongoing. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.3 Resource Conservation and Recovery Act (RCRA) Sites

The RCRA notifiers list identifies those facilities that indicate that they generate, transport, treat, store, or dispose of hazardous waste regulated under the Resource Conservation Recovery Act of 1976 (RCRA). RCRA is an amendment to the first piece of Federal solid waste legislation called the Solid Waste Disposal Act of 1965. RCRA was amended in 1980 and most recently in 1984 by the HSWA (Hazardous and Solid Waste Amendments of 1984). This list is compiled by the EPA. Generators are required to have US EPA ID numbers on all waste manifest disposal records. The extent to which these facilities actually handle such wastes varies greatly from small-quantity generators to active treatment, storage, and disposal facilities. Based on the environmental database review, two RCRA-LQG, six RCRA-SQG and 17 RCRA-NLR registered facilities were found within a quarter of a mile radius from the subject site. The RCRA NLR list contains all previously registered hazardous waste generators that are no longer actively reporting to the EPA, either temporarily or permanently. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.4 Corrective Action Report (CORRACTS) Sites:

CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity. Based on the environmental database review, one CORRACTS registered facility was found within a mile radius from the subject site. Based on its topographical elevation, its status and distance from the subject site, this site was not deemed to constitute an environmental concern to the subject site.

5.1.5 Underground Storage Tanks (UST's)

According to the database review, seven UST (Underground Storage Tank), seven SWEEPS UST, seven Historical UST, four CERS Tanks, and four CA FID UST sites were found within a quarter of a mile radius from the subject site. SWEEPS (Statewide Environmental Evaluation and Planning System) is the underground storage tank listing, updated and maintained by a company contacted by the SWRCB in the early 1980s. HIST UST is a Historical UST Registered Database. CA FID is the Facility Inventory Database that contains active and inactive underground storage tank locations. The source of this information is from the State Water Resource Control Board. The CERS (California Environmental Reporting System) Tanks is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

According to the database review, five registered aboveground storage tank (AST) sites were found within a quarter of a mile radius from the subject property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.6 Leaking Petroleum Storage Tanks within the ASTM Search Area

The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System. According to the environmental database review, eleven registered LUST (Leaking Underground Storage Tank) facilities were found within a half of a mile radius from the subject property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

California Regional Water Quality Control Board's SLIC (spills, leaks, investigation, and cleanups) records contain any sites that impact groundwater or have the potential to impact groundwater. A review of California SLIC lists revealed the presence of four SLIC sites within a quarter of a mile radius from the subject site. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.7 Spill Incidents

The Emergency Response Notification System (ERNS) list and the state Spill Incident Report contain spill records and store information of reported releases of oil and hazardous substances. These databases derive information from spill reports made to federal and local authorities to include the EPA, Coast Guard, National Response Center, local Department of Health, and Department of Transportation. This list is updated quarterly. According to the EPA's Emergency Response Notification System (ERNS) and the state Spill Incident Report, no spills have been reported within a quarter of a mile of the subject property.

5.1.8 California Voluntary Cleanup Program Sites

The California Voluntary Cleanup Program was established to provide administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in California. A review of the VCP list, provided by EDR, revealed the presence of one VCP site within approximately half a mile from the target property. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.9 Tribal Records

According to EDR, no Indian reservations were found within a mile radius of the subject site.

5.1.10 Activity and Use Limitations (AULs)

Based on the environmental database review, one Engineering Control site was found within a half a mile radius from the subject property. Based on its topographical elevation, reported status and/or its distance from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

5.1.11 Vapor Intrusion

NES has performed a Vapor Intrusion Assessment in conformance with the scope and limitations of the Standard Practice E 2600-10 on the property located at 16207 Gale Avenue, City of Industry, Los Angeles County, California. In the professional opinion of NES, an appropriate level of assessment has been conducted consistent with good commercial and customary practice in an effort to minimize liability, and no significant evidence or indication of potential vapor intrusion conditions (pVIC) or vapor intrusion conditions (VIC) has been revealed and vapor intrusion is unlikely to be an issue of concern in connection with existing or planned structures on the target property.

5.1.12 File Review

Per the ASTM E1527-21 standards, if a subject site is listed on any database as having a violation, spill, leak incident, leaking underground storage tank system or is listed as a voluntary cleanup site, the Environmental Professional shall conduct research directly with the regulatory agency regarding such and report the findings in the Phase I ESA report. Given that the subject site was not listed as such in any of the regulatory databases listed in the EDR database report, no further research was deemed necessary.

5.1.13 Other

The CERS HAZ WASTE is the listing of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs. According to the database review, eight CERS HAZ WASTE sites were found within a quarter of a mile radius of the subject site. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL), State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. A review of the ENVIROSTOR list, as provided by EDR, has revealed that there are six ENVIROSTOR site within approximately a mile of the target property. Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.

A review of the CORTESE and Historical CORTESE list, as provided by EDR, has revealed that there are nine CORTESE and nine Historical CORTESE sites within approximately half of a mile of the target property. This database identifies public drinking water wells with detectable level of contamination, hazardous substance site selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is California Environmental Protection Agency/Office of Emergency Information.

Based on its topographical elevations, reported status and/or its distances from the site, it was not deemed likely to constitute a significant environmental risk to the subject site.
The following were also found in the databases: AOCONCERN; one site, ROD; one site, PRP; one site, ICIS; one site, FINDS; one site, Drycleaners; two sites, HAZNET; one site, HWP; one site, ECHO; one site, WIP; 18 sites, and HWTS; one site. The listings were not deemed to constitute an environmental concern to the subject site.

5.2 Additional Environmental Record Sources

NES inquired about emergency responses and other incidents that could have occurred at the subject site.

5.2.1 Property Tax

NES was able to obtain property tax information from the Los Angeles County Assessor's website, some of which is attached in the appendix section of the report.

5.2.2 California UST and LPST databases

The State UST and LPST databases were searched to find out if the subject site was listed in either or both databases.

5.3 Physical Setting Sources

Potential receptors are surface or subsurface features present or adjacent to the site. These include storm sewer inlets, sanitary sewer manholes/subsurface piping, underground telephone utilities, and natural receptors that are in the vicinity of the property in review.

5.3.1 Topographical Maps

Under natural, undisturbed conditions, shallow groundwater flow generally follows the surface topography of the land. However, localized conditions may alter groundwater flow. According to the United States Geological Survey (USGS) 7.5 Minute Topographical Map, Baldwin Park and La Habra Quadrangles, which cover the area in review, the subject property is located at an elevation of 345 feet above sea level.

5.3.2 Flood Zone

Flood Insurance Rate Maps, published by FEMA, were reviewed. The subject property appears to be located in Flood Zone X, which is defined as areas outside the 500-year flood plain with less than 0.2% annual probability of flooding.

5.4 Historical Use Information on the Property

NES used historical research in an attempt to assess previous historical uses of the property back to 1940 or to its first known use. This research included reasonably ascertainable documentation obtained from several sources. This documentation is included in this report.

The "standard" historical records review included aerial photographs, fire insurance maps (Sanborn maps), local street directories (city directory search), topographic maps, building department records, interviews, property tax files, and zoning/land use records, if available or obtainable by the environmental professional.

The "standard" historical records review includes an evaluation of the past and current uses of adjoining properties.

5.4.1 Appraisal Records

Appraisal records were available for the subject site.

5.4.2 Aerial Photographs

A historical aerial photograph search was conducted on the subject property. The aerial photographs obtained are from 1928, 1938, 1947, 1952, 1964, 1970, 1977, 1981, 1983, 1990, 1994, 2002, 2005, 2009, 2012 and 2016. The aerial photographs were reviewed for visual evidence of past land usage that could have adversely impacted the subject site or properties surrounding the site. The aerial photograph review is primarily applicable for general site use chronology. Most of the aerials reviewed are not of large enough scale or of sufficient clarity to depict site-specific conditions. In the photographs from 1928 to 1952, the subject consisted of agricultural land as rows of crops were visible at the subject site. In the photos from 1964 to 2016, the subject site consisted of the current improvements. No significant changes were noted at the subject site.

5.4.3 Historical Topographic Maps

A historical topographic map search was conducted on the subject property to evaluate potential liability on the target property and its surrounding area, resulting from past activities. A topographic map is a color-coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topographic maps show the shape, elevation, and development of the terrain in precise detail by using contour lines and color-coded symbols. The historical topographic maps obtained are from 1894, 1897, 1898, 1901, 1902, 1904, 1927, 1935, 1942, 1950, 1952, 1964, 1972, 1974, 1981, 2012, 2015, and 2018. No potential environmental issues like pits, landfills or oil/gas wells were noted on the subject site.

5.4.4 City Directory Search

A review of the available historical city directories was also conducted for the subject property to evaluate the present and past land uses, structures, improvements, and the historical development of the subject site and surrounding properties. During the search, business directories including city, cross-reference, and telephone directories were reviewed, if available. “No Return” was listed as an occupant at the subject site 1971. No other listings were found for the subject site address.

5.4.5 Fire Insurance Maps (Sanborn Maps)

NES attempted to obtain historical Fire Insurance maps on the subject property to evaluate present and past land uses, structures, improvements, and historical development of the subject site and surrounding properties. The fire insurance maps were not available for the subject property.

5.4.5 Historical Chain-of-Title Records

A historical chain-of-title was not provided or requested for this study. The historical uses of the property were researched using other data sources.

5.4.7 Zoning/Land Use

NES understands that there are zoning restrictions for the area where the subject property is situated.

5.4.8 Additional Records

No additional historical records were included in the preparation of this report.

5.4.8.1 Historical Phase I ESA

NES is not aware of any prior environmental reports conducted on the subject property.

6. Site Reconnaissance

6.1 Methodology and Limiting Conditions

A NES representative conducted a walking survey of the subject property to visually observe the site and structures on the site to the extent that they were not obstructed by bodies of water, adjacent buildings, or other obstacles. The objective of the site reconnaissance was to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property.

The adjoining properties were observed from the site to determine if there was potential for impact to the site by recognized environmental conditions in connection with the adjacent properties.

No physical obstructions such as dense vegetation or water were present to obscure the site during the site inspection.

6.2 General Site Setting

The site is located in the City of City of Industry, California, in an area that is developed with commercial and industrial uses.

6.3 Exterior Observations at the Subject Site

The exterior of the building of the subject site consists of asphalt paved parking areas and driveways.

6.3.1 Water and Sewage Systems

No water wells or septic tanks were noted at the subject site.

6.3.2 Hazardous Substance and Petroleum Product Use, Storage, Treatment, and Disposal

NES noted the presence of regulated materials and hazardous materials at the subject, the presence and use of such is not deemed to constitute an environmental concern.

6.3.3 Underground Storage Tanks

No evidence of underground storage tanks was noted at the subject site.

6.3.4 PCB Containing Power Equipment

Polychlorinated biphenyls (PCBs), a hazardous group of chlorinated aromatic hydrocarbons, were used in a wide range of products including hydraulic and electrical equipment. PCB-containing equipment has the potential to cause soil and groundwater contamination. During the site visit, the property was surveyed for the presence of power transformers and other potential PCB containing electrical equipment. In accordance with State regulations, PCB containing transformers have been banned from use in California. Therefore, the presence of such in the transformers was not deemed likely.

6.3.5 Landfill Activity

A landfill is a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a land treatment facility, a surface impoundment, or an injection well. According to the EPA, a landfill is defined as an engineered (by excavation or construction) or natural hole in the ground where wastes have been disposed and are covered by backfilling or by contemporaneous soil deposition with waste disposal, covering wastes from view. The problems that the agency deems to be associated with landfills are the migration of leachate and wastes from it into the ground and adjacent surface and subsurface waters, subsidence of the ground in and above it, methane gas generation, the formation of pockets within it, and erosion. During the site visit, the subject site and area surrounding the property was surveyed for the evidence of landfill activity. None was found. From the field investigation, no obvious visual signs of piles of soil, sunken or depressed areas, disturbed soil, fill material, or stressed vegetation indicative of past or present landfill activity was observed.

6.3.6 Surface Impoundments

A surface impoundment is a facility or part of a facility which is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of liquid wastes or wastes containing free liquids and which is not an injection well. Examples of surface impoundments are holding, storage, settling, and aeration pits, ponds and lagoons. During the site visit, NES searched for evidence of surface impoundments and found none.

6.3.7 Oil/Gas Wells

No evidence of oil/gas wells, storage tanks, or associated piping was discovered on the site during the site inspection. The nearest oil/gas well is located 4,881 feet to the east northeast of the subject site.

6.3.8 Pipeline Easements

No pipeline easements were noted on the subject property during the site inspection.

6.3.9 Municipal Solid Waste Disposal

Municipal or contracted solid waste pick-up is available for the subject site.

6.3.10 Surface Water Drainage

The subject property appeared to be well drained.

6.3.11 Industrial Wastewater/Wastewater Treatment

No wastewater treatment system was noted at the subject site.

6.3.12 Stressed Vegetation/Stained Soil/Odors/Fill material

There was no significant physical or visual evidence of stressed vegetation, soil discoloration, odors, or other indicators of environmental exposure to the surface areas or soils on the subject property. The use of fill material was not apparent at the subject site.

6.3.13 Air Emissions

There is no evidence of significant air emissions on site.

6.4 Interior Observations at the Subject Site

No items of environmental concerns were noted.

6.5 Exterior Observations at Adjoining Properties

To the northeast of the subject site are a manufacturing facility; LexJet Distribution Center. To the southeast are general commercial, and light industrial uses. To the southwest are an electrical supply store; LC Electrical and Lighting, and general commercial and light industrial uses. Further to the southwest is Gale Avenue. To the northwest is Ward Way, across from which are a diesel engine repair facility; DPS Diesel Parts and Service, and general commercial and light industrial uses.

The subject site is essentially surrounded by general commercial, light industrial, and industrial park uses. The operations on the surrounding properties will by their very location and nature involve some level of activity relating to hazardous or regulated materials. That is the business of the area. It is not within the scope of this survey to determine if the surrounding properties utilized or deposited any acutely hazardous substances in the area. The determination of that event is within the purview of the regulatory data included in this report.

7. Interviews

The user questionnaire was completed by Damon Lao at DPAH LLC. It is dated October 24, 2022. The pre-survey questionnaire was completed by Frank Trinh, The Trinh, LLC, the owner of the subject site for the past 13 years. It is dated October 20, 2022. Mr. Trinh stated that the subject site has been rented as an auto parts and tent parts warehouse facility. He also stated that the subject site was occupied by a CNC machine shop from 2009 to 2020 and by stainless steel commercial appliance manufacturer from 1970 to 2009. No additional items of environmental significance were reported in the questionnaires.

8. Findings, Discussion, Opinion

The subject site was listed in two of the databases searched by EDR. Hal Riger was listed in the HAZNET and HWTS databases. The listings are not deemed to constitute an environmental risk to the subject site.

The subject site was developed with the current light industrial improvements in 1962. Prior to that, the subject site consisted of agricultural uses. Based on the regulatory file search, no violations or spills were recorded at the subject site. Based on the absence of evidence of any documentation relating to violations or spills or leaks at the subject site and the absence of any visible evidence of the misuse or mismanagement of the subject facilities, the previous and present uses of the subject site were not deemed to constitute an environmental concern at this time.

No on-site recognized environmental conditions were identified during the course of this Phase I ESA.

No controlled recognized environmental conditions were identified during the course of this Phase I ESA.

No historical recognized environmental conditions were identified during the course of this Phase I ESA.

It is unlikely that listed surrounding sites could have adversely impacted the subject site due to their proximity to the site, status, or to the nature of the event that had transpired. No off-site recognized environmental conditions were identified that were likely to impact the subject property.

9. Data Gaps

A data failure is a failure to achieve historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. A data gap is a lack or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. A significant data gap is one that "affects the ability of the environmental professional to identify a recognized environmental condition." No data gaps were encountered that affected the ability of the EP to identify recognized environmental conditions.

10. Conclusions

NES has performed a Phase I ESA in conformance with the scope and limitations of the Standard Practice E1527-21 on the property located at 16207 Gale Avenue, City of Industry, Los Angeles County, California. In the professional opinion of NES, an appropriate level of inquiry has been made into the previous ownership and use of the property consistent with good commercial and customary practice in an effort to minimize liability, and no evidence or indication of recognized environmental conditions, historic recognized environmental conditions or controlled recognized environmental conditions has been revealed. No data gaps were encountered that affected the ability of the EP to identify recognized environmental conditions. No further assessment is deemed necessary at this time.

11. Deviations

Other than listed above in this report, NES did not deviate from ASTM E1527-21.

12. Additional Services

No additional services, such as asbestos or lead-based paint surveys, were conducted.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2015. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/25/2022 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 4) is a ground water plume that runs along the axis of the San Jose Creek in the San Gabriel ground water basin in La Puenta, Los Angeles County, California. The plume is about1 mile long and 1 mile wide. Ground water is contaminated with trichloroethylene TCE) and perchloroethylene PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA SuggestedNo Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion ppb) of TCE, alevel considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984):
A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added tothe NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System:
SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

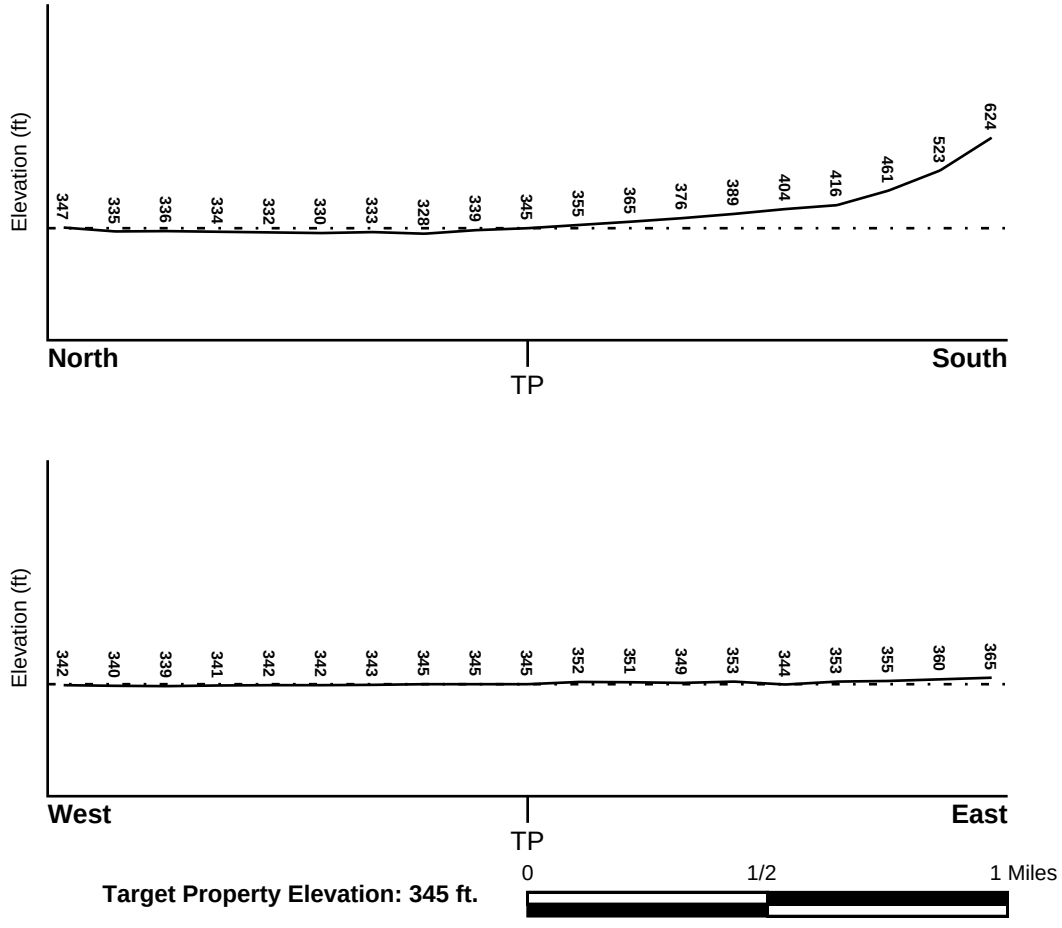
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.
