Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

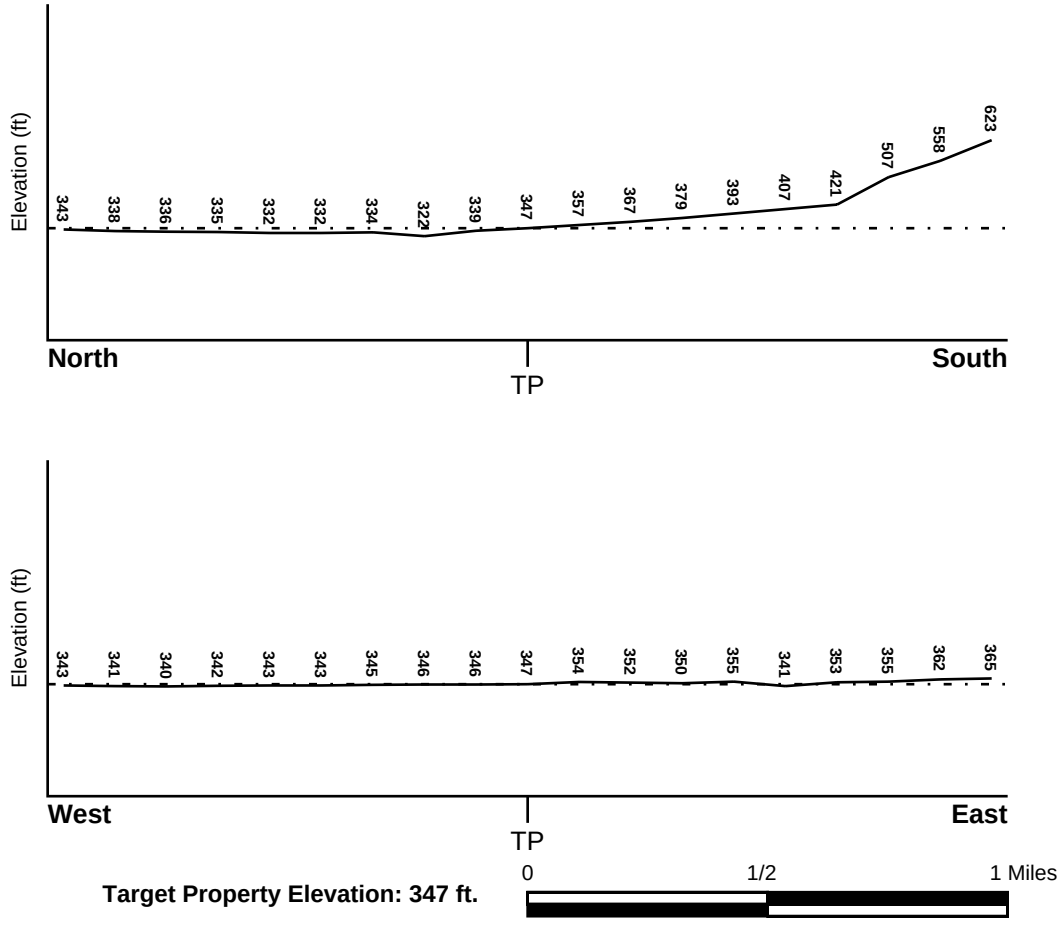
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND

PROFESSIONAL EXPERIENCE

Mr. Parten has over 30 years of experience in environmental consulting in multiple regional regulatory districts throughout the United States. His professional experience includes comprehensive site investigations and remediation studies for Industrial and Hazardous Waste sites, municipal solid waste landfill sites and underground storage tank (UST) facilities.

He has successfully managed and obtained regulatory closure of over 30 Voluntary Cleanup Program (VCP) sites and leaking underground storage tank (LUST) facilities and coordinated UST removal and closure for numerous facilities in multiple states throughout the United States. Mr. Parten continues to serve as a technical lead with Terracon and he possesses extensive experience in the installation of monitor wells, aquifer characterization, sensitive receptor surveys, risk-based assessments, vapor intrusion (VI) evaluations, and soil-gas assessments. Additionally, he has extensive experience in comprehensive soil and groundwater investigations on industrial facilities and municipal solid waste (MSW) landfill facilities, including evaluation of landfill gas/methane impacts. He has prepared and implemented corrective action work plans for remediation of chlorinated hydrocarbons at dry cleaner facilities and petroleum hydrocarbons at LUST facilities, MSW landfill facilities, and managed and implemented groundwater pump and treat, non-aqueous phase liquid (NAPL) recovery, and dual-phase vapor extraction systems for the recovery of petroleum hydrocarbons. Additionally, Mr. Parten developed work plans and implemented the remediation of heavy metals and poly-nuclear aromatic hydrocarbons (PAHs).

PROJECT EXPERIENCE

FEDERAL

- Edwards Air Force Base – Mojave, CA –provided senior technical review and management of multiple subsurface investigations, confirmation sampling and management of impacted soils.
- Riverside National Cemetery Phase 6 Development – Riverside, CA – provided senior technical review and management of Phase I Environmental Site Assessment and Phase II Subsurface Investigation activities to evaluate environmental conditions across the project.
- UPRR IWTP - Commerce – Commerce, CA – managed and provided senior technical review of various environmental subsurface investigations across the project site.
- KZF: Military Working Dog Compound Renovation - Vandenberg Air Force Base, CA

MUNICIPAL

- Phase I Environmental Site Assessments and Phase II Subsurface Investigations at various Municipal project sites: CGC Parking Garage, San Bernardino, CA; Riverside Juvenile Court 33-N1, Riverside, CA; and Vernon Data Center, Vernon, CA.

- Provided senior project management and technical review of several properties, including the remediation of metals and PAH-impacted soils, using a combination of excavation and removal and in-place stabilization. Work was performed under the EPA Brownfields Program and the Voluntary Cleanup Program. The $1.2 million-dollar remediation project was part of a high-profile downtown parks and recreation redevelopment project that successfully established LEED Certified public parks in areas once occupied by commercial and industrial property. Mr. Parten was responsible for managing all site activities, evaluation of data, reporting, communicating with local and state officials, and management of budget and schedule requirements.

- Successfully oversaw and managed the engineering design and construction quality assurance for the closure and restoration of a high-profile MSW landfill in accordance with regulatory standards, subsequent to significant investigation activities. The remedy consisted of removal and consolidation of wastes and construction of LFG recovery trenches to prevent migration of landfill gas. The remedy utilized engineering controls and removal of impacted media. Project management responsibilities included coordination with Local, State and Federal officials, public/neighborhood communications, and interaction with attorneys, and management of project budgets that exceeded $4.5 million over seven years. Terracon continues to provide post closure care monitoring and O&M for the site.

- Riverside County Regulatory Oversight, Soil Remediation, Telecommunications Site, Perris, CA - Terracon assessed the magnitude and extent of a surficial release of petroleum hydrocarbons, developed a work plan, approved by overseeing agency, and conducted remediation, removal and legal disposal of 80 cubic yards of non-hazardous soil.

- Underground Storage Tank and Soil Remediation – Regional Water Board Squaw valley, CA - Terracon assisted a private developer with the regulatory closure of an underground storage tank (UST) site located in Squaw Valley, California. The abandoned 10,000-gallon UST was responsible for a release of heavy waste oils to the ground surface and banks of a creek. Following disposal of the UST, approximately 70 cubic yards of petroleum-impacted soils were excavated and properly disposed. Interaction with the Regional Water Board and Public Notification resulted in the issuance of case closure.

Executive Summary

This Phase I Environmental Site Assessment (ESA) was performed in accordance with our Master Services Agreement, dated September 15, 2022, Terracon Task Order, dated August 5, 2024 and Work Authorization, dated August 5, 2024, and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify recognized environmental conditions (RECs) in connection with the site as reflected by the scope of this report. The ESA was conducted under the supervision or responsible charge of Laura S. Hedman, Environmental Professional. Dean Mantelzak performed the site reconnaissance on August 21, 2024.

Findings and Opinions

A summary of findings is provided below. It should be recognized that details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

Site Description and Use

The site is located at 16253-16293 Gale Avenue in the City of Industry, Los Angeles County, California 91745, and consists of an approximately 124,282-square-foot, single-story (with mezzanines), multi-tenant logistical fulfillment center (constructed in 2000), on an approximately 6.39-acre parcel of land, identified by Los Angeles County Assessor Identification Number (AIN): 8242-016-061. The site is further improved with asphalt-paved parking areas and driveways, concrete-paved loading docks, landscaping, and utilities. At the time of the visual reconnaissance, the site was observed to be occupied by Sierra Electronic & MBA Trading (16253 Gale Avenue); MBA Trading (16257, 16269, and 16293 Gale Avenue); Miles Supply Chain, Inc.; Yashilite Lighting (16261 and 16265 Gale Avenue); Tangerine Peel Village/ (16273 Gale Avenue); Skystars International (16277 Gale Avenue); Efield (USA), Inc. (16281 Gale Avenue); Metropolitan International Corp. (with operation under Honya International) (16289 Gale Avenue); and a vacant unit (16285 Gale Avenue). On-site operations consisted of administrative business activities and product warehousing, distribution, and transportation services.

Historical Information

Based on review of the historical information, the site consisted of undeveloped and/or agricultural land from as early as 1894. By 1970, the site appeared as a Christmas tree farm with small structures/sheds in the east-central portion of the site. By 2000, the site was developed with the existing multi-tenant logistical warehousing and fulfillment facility.

The surrounding properties consisted of undeveloped and/or agricultural land from as early as 1894, with the San Jose Creek to the north and Gale Avenue to the south of the site. By 1927, Union Pacific Railroad appeared developed north of the site. By 1964, the Southern California Edison Walnut Substation appeared developed east of the site; residential neighborhoods appeared developed south of the site; and the existing industrial building (Metal Cutting Service by 1976), appeared developed west of the site. The adjoining properties configuration have remained consistent through the present.

Historically, the site has been used for agricultural activities from at least 1928 to 1964. In Terracon's experience, the application of herbicides and pesticides to agricultural fields can leave trace amounts of the compounds in the shallow soil and/or groundwater; however, these residual amounts are generally below risk-based screening levels. Indication of pesticide and/or herbicide misuse or vegetative stress were not observed on the site during the site reconnaissance. The site was redeveloped as a logistical fulfillment facility in 2000, which would have involved the grading and mixing of shallow soils. The site is mostly covered with the building and associated paved parking area. Based on the development of the site, the historical agricultural use of the site does not represent a REC to the site.

Previous Reports

The Terracon November 2023 Phase I ESA identified the site as consisting of an approximately 124,282-square-foot, single-story (with mezzanines), multi-tenant logistical fulfillment center (constructed in 2000), on an approximately 6.39-acre parcel of land, and further improved with asphalt-paved parking areas and driveways, concrete-paved loading docks, landscaping, and utilities. At the time of the 2023 visual reconnaissance, the site was observed to be occupied by Sierra Electronic & MBA Trading (16253 Gale Avenue); MBA Trading (16257, 16269, and 16293 Gale Avenue); Miles Supply Chain, Inc.; Yashilite Lighting (16261 and 16265 Gale Avenue); Tangerine Peel Village/ (16273 Gale Avenue); Skystars International (16277 Gale Avenue); Efield (USA), Inc. (16281 Gale Avenue); Metropolitan International Corp. (with operation under Honya International) (16289 Gale Avenue); and a vacant unit (16285 Gale Avenue). Based on review of the findings and conclusions, Terracon identified the site to be located within an area with trichloroethylene (TCE) and perchloroethylene (PCE) impacted groundwater above applicable regulatory screening levels (San Gabriel Valley, Area 4), which represents a REC and pVEC to the site. Based on review of the EPA and Regional Water Board records, the site was not reported as a contributor to the plume. Additionally, based on review of the regulatory databases and the generated waste streams identified (including halogenated solvents), the absence of analytical data for the presence of halogenated solvents, the longevity of operations, the close proximity to the site, and the shallow depth to groundwater (approximately 18 feet bgs, at that time), Terracon identified the potential for halogenated solvent impact to the site, from the offsite adjoining SCE Walnut Substation.

Based on the San Gabriel Valley Area 4 being under regulatory oversight and active monitoring and remediation, further investigation of groundwater was not recommended at that time; however, Terracon recommended a soils and groundwater management plan to assist in the proper handling and disposal of impacted materials, if on-site soils or groundwater are to be disturbed. In addition, Terracon indicated additional evaluation of the identified vapor encroachment conditions (VECs) may be warranted, if planned future development is to include structures designed for human occupancy.

At the time of this report, the findings from the Terracon 2023 report is consistent with the current conditions: the San Gabriel Valley (Area 4) represents a REC and pVEC, and the offsite SCE Walnut Substation represents a REC to the site (further discussed in Section 4.1).

The Terracon 2023 report included review of the following client-provided report:

Partner Engineering and Science, Inc. (Partner) completed a Phase I ESA in December 2017. The area assessed consisted of the same general area as the current site. According to the Partner report, the site was occupied by Sierra Electronics and MBA Trading (16253, 16257, and 16269 East Gale Avenue), Yashilite Lighting (16261 East Gale Avenue), ACE Visual (16265 East Gale Avenue), Ollieroo (16273 East Gale Avenue), The Brainstorm Group (16277 East Gale Avenue), Nono Cosmetics (16281 East Gale Avenue), Janco & Winnex (16285 East Gale Avenue), US Honya (16289 and 16293 East Gale Avenue) for commercial office, logistics, storage, and distribution use. Based on a review of the findings and conclusions, Partner did not identify RECs, HRECs and/or CRECs associated with the site; however, Partner identified the site as a Business Environmental Risk (BER), for being located within the San Gabriel Valley, Puente Valley Operable Unit (Area 4) Superfund site. According to Partner, the site was not listed as a potential responsible party (PRP). Partner identified the known impacts beneath the site as a REC, but based on the regulatory oversight, low concentrations of contaminants of concerns, and lack of indication of the site contributing to the groundwater plume, Partner concluded that the San Gabriel Valley (Area 4) was a BER and not a REC. Partner did not recommend additional investigation

Records Review

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed. The site was listed in the regulatory databases under the following businesses:

Hensim USA dba Tierra Motorsports (a warehousing and product fulfillment business), was listed in the Facility Index System/Facility Registry System (FINDS), regulatory database, with Registry ID No. 110033194763, dated from 2008 through 2023. No indication of violations were reported in the FINDS database records. No waste manifest or waste streams were reported in the databases. Based on visual observations on the day of the site reconnaissance, indication of storage of chemicals or materials indicative

of a potential release, was not observed. Based on review of the regulatory databases and visual observations on the day of the site reconnaissance, indicating the absence of storage of chemicals or materials indicative of a potential release, the Hensim database listing does not represent a REC.

White & Blue Lion, Inc. (a warehousing and product fulfillment business), was listed in the Facility and Manifest Data (HAZNET), and Hazardous Waste Tracking System (HWTS), regulatory databases, with an inactive EPA ID No. CAC002791091, and waste streams that consisted of "Other organic solids" and "Unspecified aqueous solution". No indication of violations or releases were reported in the HAZNET and HWTS databases. Based on review of the regulatory databases and absence of reported violations and releases, the White & Blue Lion, Inc. database listings do not represent a REC.

The San Gabriel Valley (Area 4), identified as encompassing the site and surrounding areas, was identified in the FINDS, ECHO, Integrated Compliance Information System (ICIS), National Priorities List (NPL), Comprehensive Environmental Response, Compensation, & Liability Information System/Superfund Enterprise Management System (CERCLIS/SEMS), US Engineering Control (EC), Records of Decision (ROD), Potentially Reliable Party (PRP), and Area of Concern (AOCONCERN) regulatory databases. The NPL database indicates that the San Gabriel Valley (Area 4) is an area where VOC contamination in groundwater is at or above the maximum contaminant level (MCL) as designated by Region 9 EPA office (EPA ID No. CAD980817985).

Based on documents reviewed from the California Department of Water Resources (Cleanup Program Site: Global ID No. T0603700149; Remedial Progress Report First Quarter 2024 Former BDP Carrier Facility, dated April 30, 2024) the contaminants of concern (COCs) include trichloroethylene (TCE) and tetrachloroethylene (PCE). The closet groundwater monitoring well (Field Point MW-23) is located approximately 800 feet east of the site, and depth to groundwater was measured at 19 feet below grade surface (bgs), last measured on November 7, 2023. Based on the elevated concentrations of TCE and PCE, the San Gabriel Valley (Area 4) represents a REC and potential vapor encroachment condition (VEC) to the site. The San Gabriel Valley (Area 4) is further detailed in Section 4.1.

The SCE Walnut Substation, located to the adjoining east of the site, and in a topographic up-gradient position relative to the site, was listed in the Aboveground Storage Tank Facilities (AST), California Environmental Reporting System (CERS) Tanks, CERS HAZ Waste, Facility Inventory Database (CA FID UST), "Cortese" Hazardous Waste & Substances Site List (Cortese), Hazardous Waste Electronic Manifest System (E Manifest), Hazardous Substance Storage Container Database (HIST UST), Leaking Underground Storage Tanks (LUST), Statewide Environmental Evaluation Planning System Underground Storage Tank (SWEEPS UST), UST, UST Finder Databases (UST FINDER), UST Finder Releases Databases (UST FINDER RELEASE), and RCRA-Large Quantity Generator (RCRA-LQG) regulatory databases. The facility was identified as a

soil only impact, LUST Cleanup Site (Global ID No: T0603708568; closed), for a gasoline release on May 9, 2002, identified during the removal of diesel USTs. Based on soil only impact, case closure with agency oversight, and distance from the former tank hold to the site, the LUST/UST case listings do not represent a REC to the site.

Additionally. the SCE facility was identified as a facility with waste streams that consisted of "Other inorganic solids"; "Polychlorinated biphenals and material containing PCBs"; "Other organic solids"; "Unspecified oil-containing waste"; Asbestos containing waste"; Halogenated solvents"; "Off-specification, aged or surplus organics"; "Waste oil and mixed oil"; "Unspecified solvent mixture"; "Pesticides/Pesticide Production Waste"; Tank Bottom Waste"; "Liquids with PCBs" (greater than or equal to 50 milligrams per liter); and "Liquids with halogenated organic compounds (greater than or equal to 1000 milligrams per liter); "Hydrocarbon solvents"; "Polymeric resin waste"; "Detergent and soap"; "Ignitable"; "Corrosives"; Endrin"; Chlordane"; "Chloroform"; "Lead"; "Mercury"; "Benzene"; "Tetrachloroethylene"; Trichloroethylene" and "Non-halogenated solvents" (dated from 1987 through 2024). Based on review of the regulatory databases and the generated waste streams identified (including halogenated solvents), the absence of analytical data for the presence of halogenated solvents, the longevity of operations, the close proximity to the site, and the shallow depth to groundwater (approximately 19 feet bgs), the potential exists for halogenated solvent impact to the site; therefore, the SCE database listings represents a REC to the site. The SCE Walnut Substation is further discussed in Section 4.1.

The remaining listed facilities do not constitute RECs based upon facility characteristics, distance, and/or topographic gradient in relation to the site.

Site Reconnaissance

During the visual reconnaissance, Terracon observed an air compressor during the site reconnaissance, located in the Tangerine Peel Village unit (16273 Gale Avenue) and a mobile air compressor located in the Metropolitan International Corp. Unit (16289 Gale Avenue); electric forklifts and associated battery charging stations and pallet jacks throughout the site, within the various unit warehouses; two stormwater curb inlets were observed on the northern perimeter of the site, and sumps/pumps were observed in the loading dock areas; solid waste disposal/recycling bins were observed on the northeastern, southwestern, and west-central exterior of the site; and a pad-mounted transformer was observed on the west-central exterior of the site. Additionally, Terracon observed approximately five patched geotechnical exploratory soil borings, associated with geotechnical work, performed on site by Terracon in 2023 (issued as a separate report under Terracon Project No. LA235125). RECs were not identified.

Adjoining Properties

The property to the adjoining north and northeast consists of SCE power line transmission corridor and Union Pacific railroad, followed by the San Jose Creek

Diversion Channel, and then by Venus Foods, Inc., a manufacturer of Chinese foods (770 South Stimpson Avenue). The property to the adjoining east consists of SCE Walnut Substation (16333 Gale Avenue). Gale Avenue abuts the site to the south, followed by residential neighborhoods. The property to the adjoining west consists of Metal Cutting Service, a metal fabricator company (16233 Gale Avenue), and Ardmore Home Design Warehouse and Essendant Wholesaler to the west-northwest (918 South Stimson Avenue). The SCE Walnut Substation is further discussed in Section 4.1. RECs were not identified with the remaining adjoining properties.

Significant Data Gaps

No significant data gaps were identified.

Additional Services

Per the agreed scope of services, additional services as outlined in the proposal, including items described in Section 13.0 (Non-Scope Considerations) of ASTM E1527-21, were not conducted.

Conclusions

We have performed a Phase I ESA consistent with the procedures included in ASTM Practice E1527-21 of the City of Industry BESS, located at 16253-16293 Gale Avenue in the City of Industry, Los Angeles County, California 91745, the site. The following RECs, Controlled RECs (CRECs) and/or Significant Data Gaps (SDGs) was identified in connection with the site.

- Based on a review of available records, the site is located within an area with TCE and PCE impacted groundwater above MCL; therefore, the San Gabriel Valley (Area 4) represents a REC and pVEC to the site. Based on review of the EPA and Regional Water Board records, the site was not reported as a contributor to the plume.
- Based on review of the regulatory databases and the generated waste streams identified (including halogenated solvents), the absence of analytical data for the presence of halogenated solvents, the longevity of operations, the close proximity to the site, and the shallow depth to groundwater (approximately 19 feet bgs), the potential exists for halogenated solvent impact to the site; therefore, the SCE database listings represents a REC to the site.

Recommendations

Terracon understands that the San Gabriel Valley Area 4 is under regulatory oversight and active monitoring and remediation. Additionally, the SCE facility, located to the adjacent-east and in an upgradient position from the site, is a potential source of petroleum

hydrocarbon and chlorinated solvents, and may have impacted groundwater. Based on review of regulatory database and historical information, the site does not appear to be a contributor to the impacted groundwater plume. Therefore, further investigation of groundwater does not appear warranted at this time; however, if on-site soils or groundwater are to be disturbed, Terracon recommends preparing a soils and groundwater management plan to assist in the proper handling and disposal of impacted materials. In addition, if planned future development is to include structures designed for human occupancy, additional evaluation of the identified vapor encroachment conditions (VECs) may be warranted.

1.2 Scope of Services

This Phase I ESA was performed in accordance with our Master Services Agreement, dated September 15, 2022, Terracon Task Order, dated August 5, 2024 and Work Authorization, dated August 5, 2024, and was conducted consistent with the procedures included in ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify RECs in connection with the site as reflected by the scope of this report. Recognized environmental conditions are defined by ASTM E1527-21 as "(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment." This ESA includes consideration of the movement of hazardous substances and petroleum products in any form, including migration of vapor in the subsurface. A de minimis condition is not a recognized environmental condition.

This purpose was undertaken through user-provided information, a regulatory database review, historical and physical records review, interviews (including local government inquiries, as applicable), and a visual noninvasive reconnaissance of the site and adjoining properties. Limitations, ASTM deviations, and significant data gaps (if identified) are noted in the applicable sections of the report.

PFAS are a family of compounds which are considered emerging contaminants of concern due to their mobility and longevity in the environment. PFAS has been used in many products, including but not limited to fire-fighting foam, anti-stick coatings, stain and water-repellent coatings, electroplating, and paper products, among others. On July 8, 2024, US EPA designated two PFAS compounds, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), including their salts and structural isomers, as hazardous substances under CERCLA; accordingly, PFOA and PFOS will be evaluated within the scope of E1527-21. Please note that PFAS compounds are ubiquitous in the environment and this limited review is not to be construed as confirmation that PFAS compounds are not present in, at or under the site.

1.3 Standard of Care

This ESA was performed in accordance with generally accepted practices of this profession, undertaken in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this site, are of limited scope, are noninvasive, and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records were not reviewed. It should be recognized that environmental concerns may be documented in public records that were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment. We will, upon request, advise you of additional research or assessment options that may be available and associated costs.

1.4 Additional Scope Limitations, ASTM Deviations, and Data Gaps

Based upon the agreed-on scope of services, this ESA did not include subsurface or other invasive assessments, vapor intrusion assessments or indoor air quality assessments (i.e., evaluation of the presence of vapors within a building structure), business environmental risk evaluations, or other services not particularly identified and discussed herein. Credentials of the company (Statement of Qualifications) have not been included in this report but are available upon request. Pertinent documents are referred to in the text of this report, and a separate reference section has not been included. Reasonable attempts were made to obtain information within the scope and time constraints set forth by the client; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder. This ESA was further limited by the following:

- The client did not provide the requested User's information as of the issuance date of the report, which represents a data gap. Terracon assumes the client is evaluating the questionnaire information outside the context of Terracon's Phase I ESA scope of work and report. Based on the historical and environmental regulatory database reviews, the absence of a user questionnaire does not appear to represent a significant data gap.

An evaluation of the significance of limitations and missing information with respect to our findings has been conducted, and where appropriate, significant data gaps are identified and discussed in the text of the report. However, it should be recognized that an evaluation of significant data gaps is based on the information available at the time of report issuance, and an evaluation of information received after the report issuance date may result in an alteration of our conclusions, recommendations, or opinions. We have no obligation to provide information obtained or discovered by us after the issuance date of the report, or to perform any additional services, regardless of whether the information would affect any conclusions, recommendations, or opinions in the report. This disclaimer specifically applies to any information that has not been provided by the client.

This report represents our service to you as of the report date and constitutes our final document; its text may not be altered after final issuance. Findings in this report are based upon the site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances, petroleum products or PFAS compounds may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after site renovation or development). Further, these services are not to be construed as legal interpretation or advice.

1.5 Reliance

This ESA report is prepared for the exclusive use and reliance of Aypa Power Development, LLC. Use or reliance by any other party is prohibited without the written authorization of Aypa Power Development, LLC and Terracon Consultants, Inc. (Terracon).

Reliance on the ESA by the client and all authorized parties will be subject to the terms, conditions and limitations stated in the proposal, ESA report, and Terracon's Agreement. The limitation of liability defined in the Agreement is the aggregate limit of Terracon's liability to the client and all relying parties.

Continued viability of this report is subject to ASTM E1527-21 Section 4.6. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-21.

* The groundwater flow direction and the depth to shallow, unconfined groundwater, if present, would likely vary depending upon seasonal variations in rainfall and other hydrogeological features. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

3.0 Historical Use Information

Terracon reviewed the following historical sources to develop a history of the previous uses of the site and surrounding area, in order to help identify RECs associated with past uses. Copies of selected historical documents are included in Appendix C.

3.1 Historical Topographic Maps, Aerial Photographs, and Sanborn Maps

Readily available historical USGS topographic maps, selected historical aerial photographs (at approximately 10-to-15-year intervals) and historical fire insurance maps produced by the Sanborn Map Company were reviewed to evaluate land development and obtain information concerning the history of development on and near the site. Reviewed historical topographic maps and aerial photographs are summarized below.

Historical fire insurance maps produced by the Sanborn Map Company were requested from Environmental Data Resources, Inc. (EDR) to evaluate past uses and relevant characteristics of the site and surrounding properties. Based upon inquiries to the above-listed Sanborn provider, Sanborn maps were not available for the site.

West	Undeveloped land (1894-1927); agricultural land (1928-1952); developed with existing industrial building (Metal Cutting Service by 1976) (1964-Present).

Historically, the site has been used for agricultural activities from at least 1928 to 1964. In Terracon's experience, the application of herbicides and pesticides to agricultural fields can leave trace amounts of the compounds in the shallow soil and/or groundwater; however, these residual amounts are generally below risk-based screening levels. Indications of pesticide and/or herbicide misuse or vegetative stress were not observed on the site during the site reconnaissance. The site was redeveloped as a logistical fulfillment facility in 2000, which would have involved the grading and mixing of shallow soils. The site is mostly covered with the building and associated paved parking area. Based on the development of the site, the historical agricultural use of the site does not represent a REC to the site.

3.2 Historical City Directories

The EDR Digital Archive, Cole Information, Haines & Company, Inc., Pacific Bell, Pacific Telephones, R. L. Polk & Co., GTE, The Pacific Telephone & Telegraph Company, Los Angeles Directory Co., and Southern California Telephone Co. city directories used in this study were made available through EDR (selected years reviewed: 1920-2020) and were reviewed at approximate five-year intervals, if readily available. Gale Avenue listings were not available prior to 1971. The current street address for the site was identified as 16253, 16257, 16261, 16265, 16269, 16273, 16277, 16281, 16285, 16289, and 16293 Gale Avenue.

3.3 Site Ownership

Based on information obtained from EDR and local agencies, the current owner is ABI Properties Inc.

3.4 Title Search

At the direction of the client, a title search was not included as part of the scope of services. Unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.5 Environmental Liens and Activity and Use Limitations

The EDR regulatory database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases. Based on a review of the database report, the site is not listed on the EC or IC databases; however, the site is located within the San Gabriel Valley (Area 4), identified as encompassing the site and surrounding areas, which is identified in the regulatory databases as having an EC (further discussed in Section 4.1). Please note that in addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and activity and use limitation records recorded against the site were not provided by the client. At the direction of the client, performance of a review of these records was not included as part of the scope of services and unless notified otherwise, we assume that the client is evaluating this information outside the scope of this report.

3.6 Interviews Regarding Current and Historical Site Uses

The following individuals were interviewed regarding the current and historical use of the site.

Interviews

Interviewer	Name / Contact Method	Title	Date
Dean Mantelzak	Brent Haskell / (562) 762-3112 - - - George Isho / (909) 856-3517	Property Manager - - - Business Owner	August 21, 2024 / During the site visit

Terracon interviewed Mr. Brent Haskell, GM Properties, during the site visit. Mr. Haskell stated that he has been the Property Manager for the site since 2011, and during that time, the site has operated as a multi-tenant, logistical fulfillment and warehousing center. Mr. Haskell indicated that he was not aware of any on-site supply water wells, monitoring wells, USTs, contaminated soil or water, or sub-grade features. Mr. Haskell reported no on-site issues, and further indicated that he was not aware of pending environmental litigation; threatened environmental litigation; past environmental litigation; possible violations of environmental laws; possible environmental liability; and any potential environmental concerns, associated with the site, with the exception of the possible inclusion in the San Gabriel Valley (Area 4) SEM study area.

Terracon also interviewed George Isho, who has owned multiple businesses/units on-site since 2005, and noted that the current site building was constructed in 2000. Mr. Isho indicated that to his knowledge, no remodeling has occurred during his ownership of the site. Mr. Isho also noted that the previous owners of the site were Metropolitan USA (a textile production company), and Southern California Edison. Mr. Isho reported no on-site issues, and further indicated that he was not aware of pending environmental litigation; threatened environmental litigation; past environmental litigation; possible violations of environmental laws; possible environmental liability; and any potential environmental concerns, associated with the site.

3.7 Prior Report Review

Terracon requested the client provide any previous environmental reports, permits, registrations, and geotechnical reports they are aware of for the site. Previous reports were not provided by the client to Terracon for review; however, Terracon conducted the following prior report:

- Phase I Environmental Site Assessment
  City of Industry BESS
  16253-16293 Gale Avenue
  City of Industry, California 91745
  Dated: November 1, 2023 (Revised November 21, 2023)
  Prepared by: Terracon Consultants, Partner Engineering and Science, Inc.
  For: Aypa Power Development, LLC

The Terracon November 2023 Phase I ESA identified the site as consisting of an approximately 124,282-square-foot, single-story (with mezzanines), multi-tenant logistical fulfillment center (constructed in 2000), on an approximately 6.39-acre parcel of land, and further improved with asphalt-paved parking areas and driveways, concrete-paved loading docks, landscaping, and utilities. At the time of the 2023 visual reconnaissance, the site was observed to be occupied by Sierra Electronic & MBA Trading (16253 Gale Avenue); MBA Trading (16257, 16269, and 16293 Gale Avenue); Miles Supply Chain, Inc.; Yashilite Lighting (16261 and 16265 Gale Avenue); Tangerine Peel

Village/ (16273 Gale Avenue); Skystars International (16277 Gale Avenue); Efield (USA), Inc. (16281 Gale Avenue); Metropolitan International Corp. (with operation under Honya International) (16289 Gale Avenue); and a vacant unit (16285 Gale Avenue). Based on review of the findings and conclusions, Terracon identified the site to be located within an area with TCE and PCE impacted groundwater above MCL (San Gabriel Valley, Area 4), which represents a REC and pVEC to the site. Based on review of the EPA and Regional Water Board records, the site was not reported as a contributor to the plume. Additionally, based on review of the regulatory databases and the generated waste streams identified (including halogenated solvents), the absence of analytical data for the presence of halogenated solvents, the longevity of operations, the close proximity to the site, and the shallow depth to groundwater (approximately 18 feet bgs, at that time), Terracon identified the potential for halogenated solvent impact to the site, from the offsite adjoining SCE Walnut Substation.

Based on the San Gabriel Valley Area 4 being under regulatory oversight and active monitoring and remediation, further investigation of groundwater was not recommended at that time; however, Terracon recommended a soils and groundwater management plan to assist in the proper handling and disposal of impacted materials, if on-site soils or groundwater are to be disturbed. In addition, Terracon indicated additional evaluation of the identified vapor encroachment conditions (VECs) may be warranted, if planned future development is to include structures designed for human occupancy.

At the time of this report, the findings from the Terracon 2023 report is consistent with the current conditions: the San Gabriel Valley (Area 4) represents a REC and pVEC, and the offsite SCE Walnut Substation represents a REC to the site (further discussed in Section 4.1).

The Terracon 2023 report included review of the following client-provided report:

- Phase I Environmental Site Assessment
  16253-16293 East Gale Avenue
  Industry, California 91745
  Dated: December 12, 2017
  Prepared by: Partner Engineering and Science, Inc.
  For: Morgan Stanley Mortgage Capital Holdings LLC

Partner Engineering and Science, Inc. (Partner) completed a Phase I ESA in December 2017. The area assessed consisted of the same general area as the current site. According to the Partner report, the site was occupied by Sierra Electronics and MBA Trading (16253, 16257, and 16269 East Gale Avenue), Yashilite Lighting (16261 East Gale Avenue), ACE Visual (16265 East Gale Avenue), Ollieroo (16273 East Gale Avenue), The Brainstorm Group (16277 East Gale Avenue), Nono Cosmetics (16281 East Gale Avenue), Janco & Winnex (16285 East Gale Avenue), US Honya (16289 and 16293 East Gale Avenue) for commercial office, logistics, storage, and distribution use. Based on a review of the

findings and conclusions, Partner did not identify RECs, HRECs and/or CRECs associated with the site; however, Partner identified the site as a Business Environmental Risk (BER), for being located within the San Gabriel Valley, Puente Valley Operable Unit (Area 4) Superfund site. According to Partner, the site was not listed as a potential responsible party (PRP). Partner identified the known impacts beneath the site as a REC, but based on the regulatory oversight, low concentrations of contaminants of concerns, and lack of indication of the site contributing to the groundwater plume, Partner concluded that the San Gabriel Valley (Area 4) was a BER and not a REC. Partner did not recommend additional investigation.

4.0 Records Review

Regulatory database information was provided by EDR, a contract information services company in a report dated August 9, 2024. The purpose of the records review was to identify RECs in connection with the site. Information in this section is subject to the accuracy of the data provided by the information services company and the date at which the information is updated. The scope herein did not include confirmation of facilities listed as "unmappable" by regulatory databases.

In some of the following subsections, the words up-gradient, cross-gradient, and down-gradient refer to the topographic gradient in relation to the site. As stated previously, the groundwater flow direction and the depth to shallow groundwater, if present, would likely vary depending upon seasonal variations in rainfall and the depth to the soil/bedrock interface. Without the benefit of on-site groundwater monitoring wells surveyed to a datum, groundwater depth and flow direction beneath the site cannot be directly ascertained.

4.1 Federal and State/Tribal Databases

Terracon reviewed standard federal, state, and tribal environmental record sources within the approximate minimum search distances as required by ASTM E1527-21 and presented in Table 2 of Section 8.0 of the Standard (Types of Government Records to be Reviewed). Further, to enhance and supplement the standard environmental record sources, Terracon reviewed additional federal, state, tribal, local, and proprietary environmental record sources, provided by the database firm, if potentially useful and reasonably ascertainable. Please refer to Appendix D (the environmental regulatory database report) for the number of listings within each database reviewed and database definitions and descriptions.

Due to conversion of address data to location coordinates and the accuracy of government records, the facility locations depicted in the environmental regulatory database report may not match actual physical locations. As such, Terracon attempted to field-verify the actual distances of facilities of concern from the site.

The site was listed in the regulatory databases.

The following table summarizes the site-specific information provided by the database and/or gathered by this office for identified facilities. Facilities within 500 feet of the site, are listed in order of proximity to the site. Additional discussion for the site follows the summary table.

Hensim USA dba Tierra Motorsports (16257 Gale Avenue)

Hensim USA dba Tierra Motorsports, identified as the site (a warehousing and product fulfillment business), was listed in the Facility Index System/Facility Registry System (FINDS), regulatory database. The FINDS database identified the facility with Registry ID No. 110033194763, dated from 2008 through 2023. No indication of violations were

reported in the FINDS database records. No waste manifest or waste streams were reported in the databases. Based on visual observations on the day of the site reconnaissance, indication of storage of chemicals or materials indicative of a potential release, was not observed. Based on review of the regulatory databases, absence of waste stream generation, and visual observations on the day of the site reconnaissance, indicating the absence of storage of chemicals or materials indicative of a potential release, the Hensim database listing does not represent a REC.

White & Blue Lion, Inc. (16265 Gale Avenue)

White & Blue Lion, Inc., identified as the site (a warehousing and product fulfillment business), was listed in the Facility and Manifest Data (HAZNET), and Hazardous Waste Tracking System (HWTS), regulatory databases. The facility was identified with North American Industry Classification System (NAICS) Code: 99999, as "Not Otherwise Specified" business. Based on review of the HWTS and HAZNET databases, dated from 2014 through 2015, the business was identified with an inactive EPA ID No. CAC002791091, as facility with waste streams that consisted of "Other organic solids" and "Unspecified aqueous solution". No indication of violations or releases were reported in the HAZNET and HWTS databases. Based on review of the regulatory databases the White & Blue Lion, Inc. database listings do not represent a REC.

San Gabriel Valley (Area 4) (Stimson Avenue and Old Valley Boulevard)

The San Gabriel Valley (Area 4), also known as Puente Valley Operable Unit, identified as encompassing the site and surrounding areas, was identified in the FINDS, ECHO, Integrated Compliance Information System (ICIS), National Priorities List (NPL), Comprehensive Environmental Response, Compensation, & Liability Information System/Superfund Enterprise Management System (CERCLIS/SEMS), US Engineering Control (EC), Records of Decision (ROD), Potentially Reliable Party (PRP), and Area of Concern (AOCONCERN) regulatory databases. The NPL database indicates that the San Gabriel Valley (Area 4) is an area where VOC contamination in groundwater is at or above the maximum contaminant level (MCL) as designated by Region 9 EPA office (EPA ID No. CAD980817985).

Based on a review of the NPL listing, the San Gabriel Valley (Area 4) is a groundwater plume that runs along the axis of the San Jose Creek in the San Gabriel ground water basin in the La Puente area of Los Angeles County, California. The plume is approximately one mile long and one mile wide. According to sampling and analyses conducted by State agencies and local water supply companies, groundwater within the site area is contaminated with perchloroethylene (PCE), carbon tetrachloride and trichloroethylene (TCE). Multiple public water wells in the area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE, a level considered safe for human consumption. When alternative methods of

reducing the TCE level below 5 ppb are not effective, wells are removed from service. This area, along with three other San Gabriel Valley areas, was added to the NPL in May 1984. In 1985, the California Regional Water Quality Control Board began its Well Investigation Program (WIP) to identify potential sources of groundwater contamination detected in water supply wells. In 1989, the EPA entered into a cooperative agreement to expand the WIP program to evaluate the nature and extent of contamination in the San Gabriel Valley. As part of this effort, numerus facilities in the area were evaluated with regard to their potential to be a contributor of the regional groundwater impacts. In September 1998, the Record of Decision (ROD) document was signed.

Based on documents reviewed from the California Department of Water Resources (Cleanup Program Site: Global ID No. T0603700149; Remedial Progress Report First Quarter 2024 Former BDP Carrier Facility, dated April 30, 2024), the contaminants of concern (COCs) include TCE and PCE. The closet groundwater monitoring well (Field Point MW-23) is located approximately 800 feet east of the site, and depth to groundwater was measured at approximately 19 feet bgs (last measured on Nov 7, 2023). TCE and PCE were identified in the following monitoring wells:

Well ID	Approximate Location	TCE (µg/L)	PCE (µg/L)
MW-23	800 feet east / Cross-gradient	1.5	25
Concentration Trend		Increased from Second Quarter monitoring event (1.1 µg/L)	Increased from Second Quarter monitoring event (21 µg/L)
MW-42	1,080 feet northeast / Down-gradient	1.1	23
Concentration Trend		Decreased from Second Quarter monitoring event (1.3 µg/L)	Decreased from Second Quarter monitoring event (29 µg/L)
OW-07	1,200 feet east-southeast / Up-gradient	2.1	3.2
Concentration Trend		Decreased from Second Quarter monitoring	Decreased from Second Quarter monitoring

Well ID	Approximate Location	TCE (µg/L)	PCE (µg/L)
		event (7.4 µg/L)	event (22 µg/L)
MCL		5.0	5.0
ESL – Tier 1		1.2	0.64

ESLs = Environmental Screening Levels (ESLs), Summary of Soil ESLs: Direct Exposure Human Health Risk Levels (Table S-1), San Francisco Bay Regional Water Quality Control Board, January 2019 (Rev. 2)
MCLs = Maximum Contaminant Levels
RAO = Remedial Action Objective
MDL = Method Detection Level

Based on a review of available records, the site appears to be within an area with impacted groundwater above MCL; therefore, the San Gabriel Valley (Area 4) represents a REC and potential vapor encroachment condition (VEC) to the site.

Southern California Edison (SCE) Walnut Substation (16333 Gale Avenue)

The SCE Walnut Substation, located to the adjoining east of the site, and in a topographic up-gradient position relative to the site, was listed in the Aboveground Storage Tank Facilities (AST), California Environmental Reporting System (CERS) Tanks, CERS HAZ Waste, Facility Inventory Database (CA FID UST), "Cortese" Hazardous Waste & Substances Site List (Cortese), Hazardous Waste Electronic Manifest System (E Manifest), Hazardous Substance Storage Container Database (HIST UST), Leaking Underground Storage Tanks (LUST), Statewide Environmental Evaluation Planning System Underground Storage Tank (SWEEPS UST), UST, UST Finder Databases (UST FINDER), UST Finder Releases Databases (UST FINDER RELEASE), and RCRA-Large Quantity Generator (RCRA-LQG) regulatory databases. The facility was identified with NAICS Code: 2211, as an "Electric Power Generation, Transmission and Distribution"" facility; NAICS Code: 22112, as a "Fossil Fuel Electric Power Generation" facility; and NAICS Code: 221121, as an "Electric Bulk Power Transmission and Control"; and as a soil only impact, LUST Cleanup Site (Global ID No: T0603708568), for a gasoline release on May 9, 2002, identified during the removal of two USTs (one 2,500-gallon capacity gasoline and one 2,500-gallon capacity diesel UST; identified approximately 95 feet east of the site). In 2002, soil samples from beneath the USTs and dispensers were collected and analyzed for total petroleum hydrocarbons gasoline and diesel range (TPH-G and TPH-D), benzene, toluene, ethyl benzene, total xylenes, methyl tert-butyl ether (MTBE), diisopropyl ether (DIPE), tert-Amyl methyl ether (TAME), ethyl tert-butyl ether (ETBE), and tertiary butyl alcohol (TBA). Based on the analytical data, the samples were non-detect (ND) above laboratory reporting limits, with the exception of MTBE and TBA, which had elevated concentration in the amounts of 11 micrograms per kilograms (µ/Kg) and 130 µ/Kg, respectively. Based on the analytical data, case closure was granted on dated October 15, 2019, with No Further Action (NFA) letter. The AST database indicated the facility operates a 3,702-gallon capacity AST; CERS ID No. 10159863; permitted by

the Los Angeles County; Facility ID No: LACoFA0011844, under SCE. Based on soil only impact, case closure with agency oversight, and distance from the former tank hold to the site, the LUST/UST case listings do not represent a REC to the site.

Additionally. the SCE facility was identified with EPA ID No: CAD981694128 and CAR000203133 (dated from 1987 through 2024); as a facility with waste streams that consisted of "Other inorganic solids"; "Polychlorinated biphenals and material containing PCBs"; "Other organic solids"; "Unspecified oil-containing waste"; Asbestos containing waste"; Halogenated solvents"; "Off-specification, aged or surplus organics"; "Waste oil and mixed oil"; "Unspecified solvent mixture"; "Pesticides/Pesticide Production Waste"; Tank Bottom Waste"; "Liquids with PCBs" (greater than or equal to 50 milligrams per liter); and "Liquids with halogenated organic compounds (greater than or equal to 1000 milligrams per liter); "Hydrocarbon solvents"; "Polymeric resin waste"; "Detergent and soap"; "Ignitable"; "Corrosives"; Endrin"; Chlordane"; "Chloroform"; "Lead"; "Mercury"; "Benzene"; "Tetrachloroethylene (PCE)"; Trichloroethylene (TCE)"; and "Non-halogenated solvents". Based on review of the regulatory databases and the generated waste streams identified (including halogenated solvents), the absence of analytical data for the presence of halogenated solvents, the longevity of operations, the close proximity to the site, and the shallow depth to groundwater (approximately 19 feet bgs), the potential exists for halogenated solvent impact to the site; therefore, the SCE database listings represents a REC to the site.

Metal Cutting Service and Ceromet Inc. (DEST) (16233 East Gale Avenue & 16235 East Gale Avenue (16233 East Gale Avenue & 16235 East Gale Avenue)

Metal Cutting Service and Ceromet Inc., located to the adjoining west of the site, and in a topographic down-gradient position relative to the site, were listed in the CERS HAZ Waste, Statewide SLIC Cases (GEOTRACKER) (CPS-SLIC), Well Investigation Program (WIP), E Manifest, and Resource Conservation and Recovery Act Non-Generators/No Longer Regulated (RCRA NonGen/NLR) regulatory databases. According to the regulatory databases and a review of GeoTracker online databases, the facility was identified with CPS-SLIC Case No. T10000015653 and WIP Case List (File No. 105.0174), associated with the San Gabriel Valley (Area 4), listed above. However, based on review of the databases, the constituents of concern (PCE and TCE) were not identified; the facility was not reported as a contributor to the San Gabriel Valley (Area 4) groundwater plume; and the case was closed on May 1, 1989. Additionally, the facility was identified with CERS ID No: 10268503; Site ID No: 397476; Los Angeles County Permitted Facility; Facility ID No: 004829-105105; and active EPA ID No. CAL000028617 (under Metal Cutting Service), dated from 1990 and last updated in 2023, as a hazardous waste generating facility with on-site waste treatment, and waste steams identified as "universal waste"; "unspecified aqueous solution"; "waste oil and mixed oil"; "oil/water separation sludge"; and "other organic solids". Based on review of the regulatory databases and GeoTracker database, clean-up case closure with regulatory oversight, topographic down-gradient position relative to the site, and absence of PCE and TCE

reported use or release, indication of RECs were not identified with the Metal Cutting Service and Ceromet Inc. listings.

Challenger Enterprises, Inc. and United Stationers (918 South Stimson Avenue)

Challenger Enterprises, Inc. and United Stationers, identified to the adjoining west-northwest of the site, and in a topographic down-gradient position relative to the site, were listed in the CPS-SLIC and WIP regulatory databases. According to the regulatory databases and a review of GeoTracker online databases, the facility was identified with CPS-SLIC Case No. T10000015752 and WIP Case List (File No. 105.0292), associated with the San Gabriel Valley (Area 4), listed above. However, based on review of the databases, the constituents of concern (PCE and TCE) were not identified; the business were not reported as a contributor to the San Gabriel Valley (Area 4) groundwater plume. The Buccola Manufacturing, Inc. case was closed on June 29, 1995, and the Crown City Furniture Manufacturing case was closed on March 17, 1997.

Additionally, Buccola Manufacturing, Inc. was identified as a drycleaning facility, with NAICS Code: 7211, as a “Power Laundries, Family and Commercial” business; NAICS Code: 81232 as a “Drycleaning and Laundry Services (except Coin-Operated)” business; and NAICS Code: 337121 as a “Upholstered Household Furniture Manufacturing” business. Based on review of the HWTS and HAZNET databases, 1990 through June 30, 2017, the business was identified with EPA ID No. CAL000028441, as facility with Non RCRA waste streams that consisted of “Unspecified organic liquid mixture”; “Off-specification, aged or surplus organics”; and “Unspecified solvent mixture”; and RCRA waste streams that consisted of “Waste flammable liquids N.O.S.”. Waste manifests

obtained from the HWTS online database reported the flammable as "Enamel paint, Petroleum Distillates" in the quantity of 330-gallons in 2011; 55-gallons in 2006 and 2007, and 165-gallons in 2004. No indication of compliance violations were reported in the HAZNET and HWTS databases. Based on review of the regulatory databases and GeoTracker database, clean-up case closure with regulatory oversight, topographic down-gradient position relative to the site, absence of PCE and TCE reported use or release, and the distance from the site, indication of RECs were not identified with Buccola Manufacturing, Inc. and Crown City Furniture Manufacturing.

However, based on review of the databases, the constituents of concern (PCE and TCE) were not identified; the facility was not reported as a contributor to the San Gabriel Valley (Area 4) groundwater plume; and the case was closed on January 1, 1996. Based on review of the regulatory databases and GeoTracker database, clean-up case closure with regulatory oversight, topographic down-gradient position relative to the site, and the distance from the site, indication of RECs were not identified with Orbis Industries, Inc., dba Diato and Krall Cast, Inc.

L.V.I.-Paul Taylor Ent., Inc. and Future Hitech Planning (16207 Ward Way)

L.V.I.-Paul Taylor Ent., Inc. and Future Hitech Planning, located approximately 350 feet west of the site, and in a topographic down-gradient position relative to the site, were listed in the RCRA NonGen/NLR, CPS-SLIC, and WIP regulatory databases. According to the regulatory databases and a review of GeoTracker online databases, the facility was identified with CPS-SLIC Case No. T10000015636 and WIP Case List (File No. 105.0151), associated with the San Gabriel Valley (Area 4), listed above. However, based on review of the databases, the constituents of concern (PCE and TCE) were not identified; the facility was not reported as a contributor to the San Gabriel Valley (Area 4) groundwater plume; and the case was closed on October 18, 1996. Based on review of the regulatory databases and GeoTracker database, clean-up case closure with regulatory oversight, topographic down-gradient position relative to the site, and the distance from the site, indication of RECs were not identified with L.V.I.-Paul Taylor Ent., Inc. and Future Hitech Planning.

The remaining facilities listed in the database report do not appear to represent RECs to the site at this time based upon regulatory status, apparent topographic gradient, and/or distance from the site.

Unmapped facilities are those that do not contain sufficient address or location information to evaluate the facility listing locations relative to the site. The report listed six facilities in the unmapped section. Determining the location of unmapped facilities is beyond the scope of this assessment; however, the facility was not identified as the site or adjoining properties.

Site Operations, Processes, and Equipment

Air compressors

Terracon observed an air compressor during the site reconnaissance, located in the Tangerine Peel Village unit (16273 Gale Avenue) and a mobile air compressor located in the same unit. No evidence of staining or release was observed on the unit or in the vicinity of the unit. Based on visual site observations and absence of staining, the air compressors do not represent a REC to the site.

Heating and/or cooling systems

During the site reconnaissance, the building was observed equipped with roof-mounted heating, ventilation, and air/conditioning (HVAC) systems. Indications of RECs were not observed.

Other processes or equipment

During the visual reconnaissance, Terracon observed electric forklifts and associated battery charging stations and pallet jacks throughout the site, within the various unit warehouses. Based on visual observations, RECs were not observed.

Aboveground Chemical or Waste Storage

Drums, barrels, and/or containers ≥ 5 gallons

At the time of the site reconnaissance, two empty five-gallon plastic containers of gasoline, and an empty 55-gallon gasoline drum were observed in the warehouse storage area in Hytec Power Inc. (16293 Gale Avenue). In addition, multiple 5-gallon propane tanks were observed within the MBA Trading Group, Inc. warehouse (16253 Gale Avenue). The containers were not stored within secondary containment. No floor drains or sumps were observed in the vicinity of the containers, and no surficial staining was observed in the vicinity of the containers. Based on site observations, the on-site containers do not constitute RECs.

Underground Chemical or Waste Storage, Drainage or Collection Systems

Sumps, cisterns, French drains, catch basins, and/or dry wells

Two stormwater curb inlets were observed on the northern perimeter of the site, and sumps/pumps were observed in the loading dock areas, during the visual reconnaissance. No evidence of chemical waste disposal, noxious odors, or other indications of releases were observed in the vicinity of the stormwater inlets or sumps/pumps. Based on site observations, the stormwater inlets and sumps/pumps do not represent a REC to the site.

Interior floor drains

Interior floor drains were observed in the restrooms, in the vicinity of one of the warehousing areas. No evidence of chemical waste disposal, noxious odors or other indications of releases were observed around the floor drains during the site reconnaissance. Potentially hazardous materials did not appear to be stored in the vicinity of the floor drains. Based on site observations, the interior floor drains do not represent a REC to the site.

Electrical Transformers/ PCBs

Transformers and/or capacitors

During Terracon’s site visit, one pad-mounted transformer, owned and serviced by SCE was observed on the western exterior of the site; however, no information with regard

to PCB content of the transformer fluids was observed. Some transformers contain mineral oil which may contain PCBs.

SCE maintains responsibility for the transformer, and if the transformer was "PCB contaminated," SCE is not required to replace the transformer fluids until a release is identified. However, evidence of current or prior releases was not observed in the vicinity of the electrical equipment during the site reconnaissance.

Additionally, Terracon observed "dry-type" transformers, located within the warehousing areas, of the various units. Based on the dry-type nature of the equipment, the dry-type transformers do not represent a REC to the site.

Releases or Potential Releases

Stained pavement or similar surface

De minimis surface staining was observed on the concrete flooring in the vicinity of the loading dock area of the vacant unit (16261 Gale Avenue). Based on visual observations and the *de minimis* nature of the staining, RECs were not observed.

Dumping or disposal areas

Solid waste disposal/recycling bins were observed on the northeastern, southwestern, and west-central exterior of the site, and within the western portion of the Tread Fusion warehouse. Additionally, a solid waste disposal area enclosure (empty) was observed on the western perimeter of the site. No evidence of chemical waste disposal, noxious odors, or other indications of releases were observed in the vicinity of the disposal/recycling bins. Based on site observations, the solid waste disposal/recycling bins do not represent a REC to the site.

Other Notable Features

Soil Borings

At the time of the site reconnaissance, approximately five patched geotechnical exploratory soil borings were observed at the site. The patched soil boring locations were associated with geotechnical work that had been performed on the site by Terracon in 2023. The geotechnical report was issued as a separate document (Terracon Project No. LA235125). No evidence of noxious odors, or other indications of releases were observed in the vicinity of the patched borings. Based on site observations, the patched borings do not represent a REC to the site.

6.0 Adjoining Property Reconnaissance

Visual observations of adjoining properties (from site boundaries) are summarized below.

Adjoining Properties

Direction	Description
North	The property to the adjoining north and northeast consists of SCE power line transmission corridor and Union Pacific railroad, followed by the San Jose Creek Diversion Channel, and then by Venus Foods, Inc., a manufacturer of Chinese foods (770 South Stimpson Avenue).
East	The property to the adjoining east consists of SCE Walnut Substation (16333 Gale Avenue).
South	Gale Avenue abuts the site to the south, followed by residential neighborhoods.
West	The property to the adjoining west consists of Metal Cutting Service, a metal fabricator company (16233 Gale Avenue), and Ardmore Home Design Warehouse and Made Goods to the west-northwest (918 South Stimson Avenue).

The SCE Walnut Substation is further discussed in Section 4.1. RECs were not identified with the remaining adjoining properties.

7.0 Additional Services

Per the agreed scope of services specified in the proposal, additional services (asbestos sampling, lead-based paint sampling, wetlands evaluation, lead in drinking water testing, radon testing, vapor encroachment screening, etc.) were not conducted.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

CAS Number: 79-01-6
Substance: TRICHLOROETHYLENE (TCE)
Pathway: GROUND WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 4) is a ground water plume that runs along the axis of the San Jose Creek in the San Gabriel ground water basin in La Puenta, Los Angeles County, California. The plume is about1 mile long and 1 mile wide. Ground water is contaminated with trichloroethylene TCE) and perchloroethylene PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA SuggestedNo Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion ppb) of TCE, alevel considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984):
A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem.
EPA continues its investigation to identify sources of the contamination.
This site, along with the three other San Gabriel Valley sites, was added tothe NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System:
The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide

SOUTHERN CALIFORNIA GAS CO (Continued) **1000167605**

web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
