Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes:	Returned to compliance on 09/18/2018. Observation: Owner/operator failed to update the BUSINESS ACTIVITIES section on the California Environmental Reporting System (CERS). Corrective Action: Log onto the California Environmental Reporting System (CERS) to update the BUSINESS ACTIVITIES section. Operator stated this facility does not store any regulated substance on site but CERS is indicating that this facility has regulated substances over the threshold.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes:	Returned to compliance on 09/18/2018. Observation: Owner/Operator failed to provide an emergency action plan that addresses the emergency action and notification procedures for hazardous material releases. There is only an emergency action plan for earthquake. Corrective Action: Revise the emergency action plan to include emergency response procedures for the release of hazardous material, including notification and evacuation procedures.

Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training

LANGER JUICE CO INC (Continued) **S113119245**

records for a minimum of three years.

Violation Notes: Returned to compliance on 09/18/2018. Observation: Owner/operator failed to provide training to employees on emergency action procedures for the release of hazardous materials. Corrective Action: Ensure training is provided to employees in the safety procedures in the event of a release or threatened release of hazardous materials. This training should be properly documented to show that employees are familiar with how to respond to emergencies including a release of hazardous materials and how to safely evacuate the site. Employee training is critical due to the large inventory of various hazardous materials handled/stored at this site.

Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 06/22/2018. OBSERVATION: Uniform Hazardous Waste Manifests for used oil were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for used oil for the last 3 years and submit copies to the CUPA.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	396274
Site Name:	LANGER JUICE CO INC
Violation Date:	04-26-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	Returned to compliance on 09/18/2018. Observation: Owner/operator failed to submit a site map with all the required elements including evacuation staging area and hazardous materials storage areas. Corrective Action: Revise and resubmit the site map to clearly show all the required components; north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 11/16/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Observed 110 gallon mini-tote of used oil 100% filled at back pallet storage area. Manager stated that waste oil is periodically generated from machinery every few months and stored in the waste bins, could not produce records or manifest indicating a waste oil pick-up in the last year. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation (manifest records) that the violation has been corrected.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	396274
Site Name:	LANGER JUICE CO INC
Violation Date:	10-21-2021
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 11/16/2021. OBSERVATION:110 gallon mini-tote of waste oil located in the back pallet storage area was observed left open. Maintain all hazardous waste containers closed with a tight-fitting lid whenever they are not being actively filled. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	396274
Site Name:	LANGER JUICE CO INC
Violation Date:	04-26-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

LANGER JUICE CO INC (Continued) **S113119245**

Violation Notes: Returned to compliance on 09/18/2018. Observation: Owner/operator failed to accurately submit hazardous materials inventory to the California Environmental Reporting System (CERS). Corrective Action: Log onto the California Environmental Reporting System (CERS) to correct the deficiencies in the HAZARDOUS MATERIALS INVENTORY section, as discussed in details with Mr. Terrill, including the following: a. The reporting unit for the propane should be in gallon, 2. The field for "MAXIMUM DAILY AMOUNT" should reflect the maximum daily amount that are stored on site for each chemical , NOT the amount used, for example, the "MAX. DAILY" field for "SODIUM HYDROXIDE" should show 900 gallons, not 35 gallons.

Violations:
Site ID: 529871
Site Name: Cosmos Food Co Inc
Violation Date: 05-12-2021
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Failure to meet NEC criteria
Violation Notes: failure to meet NEC
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-12-2021
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Based on inspection findings the facility s repair activities and storage procedures do not meet the NEC requirement of maintaining a permanent condition of no exposure. Between June 9, 2021 and July 12, 2021, Mr. Simmons emailed me information about procedural and removal of outdoor maintenance and exposed wastes to meet NEC requirements. Review of the changes were made to determine the NEC requirements were met. See attached correspondence/photos.

WDS:
Name: KIM LIGHTING
Address: 16555 E Gale Ave
City: CITY OF INDUSTRY
Facility ID: 4 19I004395
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
Agency Name: KIIM LIGHTING
Agency Address: 16555 E. Gale Ave.
Agency City,St,Zip: City of Industry 91745
Agency Type: Private
SIC Code: 0
Design Flow: 0

KIM LIGHTING (Continued) **1006816084**

Baseline Flow: 0
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different

NUSIGN SUPPLY INC (Continued) **1000148668**

systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

	1, Section(s) 265.31
Violation Description:	Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes:	Returned to compliance on 06/13/2018. OBSERVATION: Perform housekeeping throughout. Accumulation of oil and absorbent was observed in the hazardous waste storage area. A 55 gallon drum against fence in hazardous waste storage area was labeled as Non-RCRA hazardous waste (used oil) was observed without bung cap and lid contained a substantial amount of oily water. Many other drums were observed not properly closed (bung caps open and ring tops not bolted) and would not be spill proof if the container were to be tipped over in an accident. CORRECTIVE ACTION: Submit photos/documentation to the CUPA demonstrating the spill has been properly removed and managed.

Violation Date: 04-19-2016
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: Returned to compliance on 06/07/2016. OBSERVATION: The facility has not annually reviewed and certified that the business plan is complete, accurate, and up-to-date. A review of CERS revealed that the last submittal of a HMBP to CERS was on 9/26/13. CORRECTIVE ACTION: Review, revise, and certify the business plan electronically in the California Environmental Reporting System (CERS).
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP

Violation Date: 04-19-2016
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 06/07/2016. OBSERVATION: A complete business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan. CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

WDS:

Name:	PAC FOUNDRIES INDUSTRY
Address:	16800 Chestnut St
City:	CITY OF INDUSTRY
Facility ID:	4 19I016313
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

PAC FOUNDRIES-INDUSTRY (Continued) **S101669365**

Baseline Flow:	0
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

South Map:	50005784 LA HABRA, CA
Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

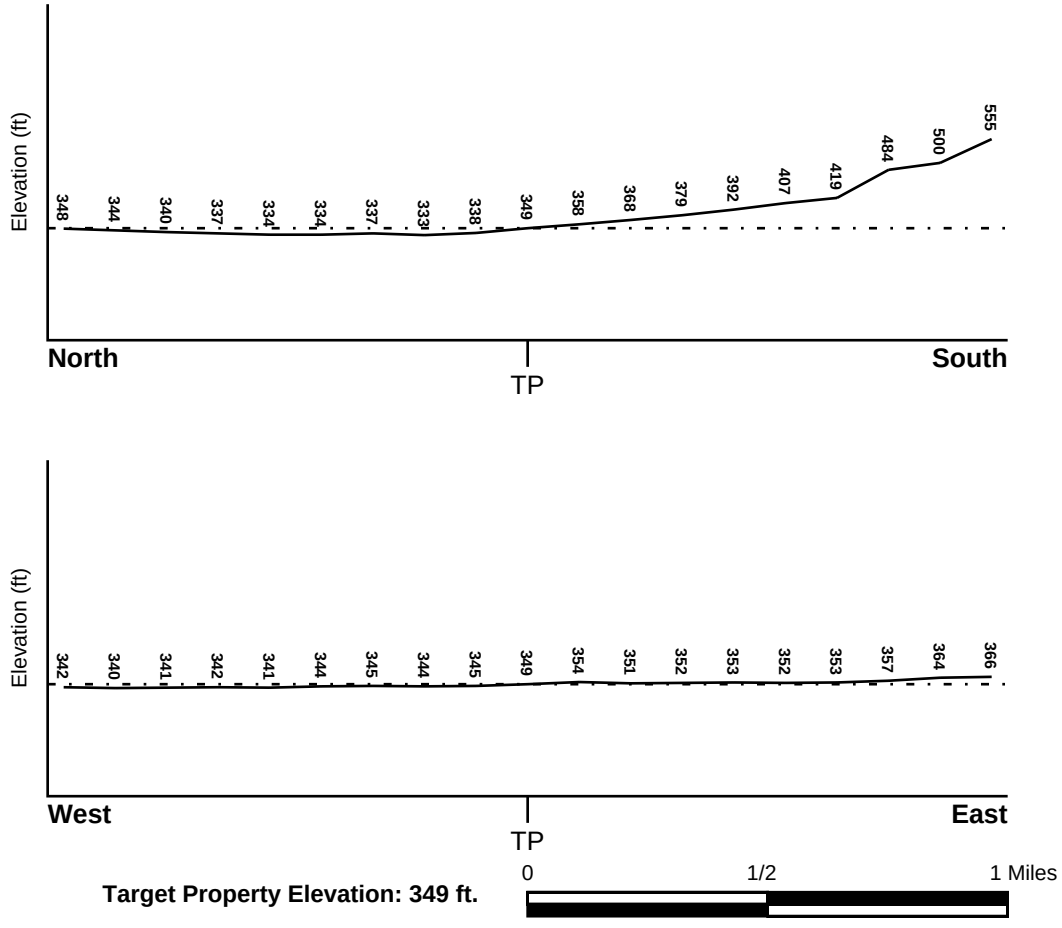
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1700F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1695F	FEMA FIRM Flood data
06037C1875F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BALDWIN PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile NNW
Site Name:	San Gabriel Valley (Area 4)
Site EPA ID Number:	CAD980817985
Groundwater Flow Direction:	CONSISTENT WITH TOPOGRAPHICAL CONDITIONS IN THE ABSENCE OF PUMPING OF WELLS.
Measured Depth to Water:	15 feet at the northeastern end of the site and 50 feet at the southwestern end of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX E

CREDENTIALS

Dean Mantelzak

ENVIRONMENTAL ASSISTANT SCIENTIST

PROFESSIONAL EXPERIENCE

Mr. Mantelzak is an Environmental Assistant Scientist in Terracon's Los Angeles, California Office. In this office, Mr. Mantelzak prepares Phase I Environmental Site Assessments (ESA) reports. He manages all aspects of the project and engages with the Authorized Project Reviewer to ensure that it is completed within scope, and on time. Additionally, Mr. Mantelzak oversees field surveys, interviews with property owners, Environmental Data Resource reports, and file reviews at local county and city regulatory offices. As required, each ESA is prepared and finalized in accordance with the current ASTM 1527-21 Standard. His experience ranges from small scale buildings to large scale industrial and commercial properties.

PROJECT EXPERIENCE

Dean has conducted Phase I ESA for properties in California in the United States, evaluating present and past land use to locate potential sources of hazardous materials/wastes. Tasks involved consist of reviewing environmental data/records, including aerial photographs, fire insurance maps, topographic maps, historical city directories, environmental database reports, site reconnaissance, personnel interviews, state, and local agencies file reviews. Assessed properties span commercial, industrial, vacant, and retail buildings, restaurants, offices, and agricultural/undeveloped land ranging up to 12 acres.

PROFESSIONAL EXPERIENCE

Ms. Hedman is a staff geologist in Terracon's Colton, CA office, Environmental Department. Ms. Hedman's professional experience includes Environmental Services, Phase I Environmental Site Assessments (ESAs), Limited Environmental Compliance Assessments (LECAs), Limited Site Investigations (LSIs), soil and groundwater sampling, and groundwater monitoring projects. She has conducted site assessments on office facilities, warehouses, manufacturing facilities, automotive dealerships, restaurants, hospitals, medical offices, telecommunication towers, vacant, and agricultural land. She prepares environmental site assessment reports; researching city directories and regulatory agency files; and reviews aerial photographs and topographic maps. In addition, she assists the Senior Project Manager in Phase I Environmental Site Assessments.

PROJECT EXPERIENCE

Office Buildings/Medical Office Building – California

Project Manager and Environmental Site Assessments on office properties, which includes multi-story financial, educational, medical office buildings, and a 95,000-square-foot community hospital.

Warehouse Buildings/Logistical Centers – California

Project Manager and Environmental Site Assessment on warehouses and logistical centers, which includes commercial facilities with 1.2 million-square-foot warehousing space.

Restaurants/Retail Buildings – California

Project Manager and Environmental Site Assessment on family-style restaurants, and retail lease spaces.

Auto Dealership/Automotive Service– California

Project Manager and Environmental Site Assessment on automotive dealerships, automotive maintenance facilities, and automotive collision repair centers.

Undeveloped/Vacant/Agricultural – California

Project Manager and Environmental Site Assessments on undeveloped, vacant, and agricultural land; from less than one-acre- to over 200-acre parcel of land.

Carl A. Parten, P.G

CONTRACT MANAGER, SENIOR PRINCIPAL

PROFESSIONAL EXPERIENCE

Mr. Parten has over 30 years of experience in environmental consulting in multiple regional regulatory districts throughout the United States. His professional experience includes comprehensive site investigations and remediation studies for Industrial and Hazardous Waste sites, municipal solid waste landfill sites and underground storage tank (UST) facilities.

He has successfully managed and obtained regulatory closure of over 30 Voluntary Cleanup Program (VCP) sites and leaking underground storage tank (LUST) facilities, and coordinated UST removal and closure for numerous facilities in multiple states throughout the United States. Mr. Parten continues to serve as a technical lead with Terracon and he possesses extensive experience in the installation of monitor wells, aquifer characterization, sensitive receptor surveys, risk-based assessments, vapor intrusion (VI) evaluations, and soil-gas assessments. Additionally, he has extensive experience in comprehensive soil and groundwater investigations on industrial facilities and municipal solid waste (MSW) landfill facilities, including evaluation of landfill gas/methane impacts. He has prepared and implemented corrective action work plans for remediation of chlorinated hydrocarbons at dry cleaner facilities and petroleum hydrocarbons at LUST facilities, MSW landfill facilities, and managed and implemented groundwater pump and treat, non-aqueous phase liquid (NAPL) recovery, and duel-phase vapor extraction systems for the recovery of petroleum hydrocarbons. Additionally, Mr. Parten developed work plans and implemented the remediation of heavy metals and poly-nuclear aromatic hydrocarbons (PAHs).

TONY P. MIKACICH

DEPARTMENT MANAGER I | ENVIRONMENTAL SERVICES

PROFESSIONAL EXPERIENCE

Mr. Mikacich is a Professional Geologist in California and Environmental Department Manager in the firm with over 24 years experience managing complex environmental investigations and remediation programs for a variety of industrial, utility and energy-related facilities, military bases, petroleum retailers, and landfill sites in California, and Nevada. Mr. Mikacich's areas of specialty include site characterization, remediation, construction and treatment system oversight, delineation of groundwater contaminant plumes, solid waste characterization, hazardous materials decontamination, and the preparation of technical reports.

Mr. Mikacich also has significant experience in site remediation projects including commercial and retail projects of various sizes in different markets. Mr. Mikacich routinely interacts with state, federal and local regulatory agencies on behalf of clients in obtaining regulatory resolutions to environmental issues and compliance matters.

Mr. Mikacich also has experience in completing regulatory compliance permitting and providing environmental permitting assistance for numerous facilities.

Education
Bachelor of Science in Geology, California State University, Chico, 2000

Licenses
Professional Geologist – California #9918

Certifications
Nevada Certified Environmental Manager- #EM1859

OSHA HAZWOPER 40-hour certified (1999)

OSHA HAZWOPER 8-hour (current)

Work History
Terracon Consultants, Inc. Senior Geologist and Department Manager, March 2019-Present

Environmental Compliance Assessments and Monitoring:

Mr. Mikacich has managed numerous compliance assessment and monitoring projects for private, federal, and utility and energy-related clients. The scope of assessments performed includes assessments of such issues as air quality, groundwater, soil, wastewater generation, hazardous waste generation, and aboveground/underground storage tanks. The scope of compliance monitoring projects include groundwater, air quality, surface water quality, and soil. Mr. Mikacich has worked with industries including utility and energy-related facilities, commercial and industrial facilities, chemical manufacturing, petroleum retailers, and commercial real estate construction/development.

Gasoline Retailer – Multiple Sites in California and Nevada

Mr. Mikacich managed approximately 10 sites with an annual budget in excess of $500,000 located in both California and Nevada for a private client with a portfolio of more than 100 retail gasoline stations. Mr. Mikacich's key responsibilities included managing the groundwater monitoring and sampling, assessment, and remediation of site contaminants including BTEX and MTBE. Remedial designs included; dual-phase extraction, vapor extraction, air sparge, and groundwater pump and treat. Additional remedial actions have included Underground Injection Permits for the application of peroxide. Mr. Mikacich's responsibilities also included authoring conceptual site models, work plans, feasibility studies, CAP's, remedial design, treatment system installation, and O&M of remediation systems.

Former Gasoline Retailer – Isleton California

Mr. Mikacich is currently managing project activities that include the preparation of the scope of work and budget to perform a Limited Site Investigation (LSI) for a former gasoline retailer with a reported release from past operations. Mr. Mikacich was responsible for the preparation and application submittal to the California

Ophan Site Cleanup Fund to request financial support for future site assessment and potential remedial action.

Former Gasoline Retailer and Automotive Repair Shop – Stockton California

Mr. Mikacich is currently managing a project that included the preparation of the scope of work and budget to investigate an offsite LUST case and a former onsite automotive repair shop for TPH, VOCs, and metals contaminants in soil and groundwater. A Limited Site Investigation (LSI) was performed at the site to investigate past site use and future redevelopment for a new convenience store and fuel station.

Former Dry Cleaners – Las Vegas, Nevada

Mr. Mikacich managed a former dry cleaner site which had an unauthorized release of tetrachloroethene (PCE) and trichloroethene (TCE) into the subsurface soil and groundwater. Mr. Mikacich's role included submitting a Corrective Action Plan (CAP) to the Nevada Division of Environmental Protection (NDEP) to address on-site contamination, which included expanding the current Dual-Phase Extraction (DPE) system, and a separate CAP and DPE system to address contaminants which migrated off-site and more than 1,800 feet down-gradient in groundwater. This project which had an annual budget of $300,000 involved the characterization of PCE and TCE, a feasibility study, pilot testing, design and installation of two remedial systems for the clean-up of on- and off-site contaminants. Mr. Mikacich was the primary point of contact to the client and regulatory agencies and was responsible for the implementation of the two CAPs. Mr. Mikacich's responsibilities included providing technical oversight and management of all on-going remediation and monitoring activities to ensure reporting was completed in accordance with all permits and regulatory requirements.

Site Assessment and Hazardous Materials Decontamination Program - Northern California Utility

Mr. Mikacich managed a program that focused on site assessment and decontamination and management of hazardous materials for the Utility to reduce environmental risk and insure worker safety. I was responsible for managing the assessment of approximately 50 sites which resulted in the hazardous materials decontamination of 20 of those sites from across all lines of business. Mr. Mikacich's key roles and responsibilities included managing; program-level cost proposals, budgets and invoicing, quality and work products, schedules, staffing, program team update meetings, and communications with the prime contractor and client. The program had an annual budget as high as $650,000.

Environmental Site Assessments:

Mr. Mikacich has managed due diligence investigations on property types ranging from commercial retail to manufacturing facilities. The investigations include identification of a variety of environmental hazards including hazardous substance and petroleum impacted soils and groundwater, chlorinated solvents, asbestos, PCBs, USTs and other regulatory concerns. Mr. Mikacich has performed or managed due diligence activities at sites in conformance with ASTM and USEPA guidelines and standards.

Mr. Mikacich has coordinated remedial investigation activities including work plan preparation, implementation and generation of final reports. He has been involved with the development of conceptual site models and corrective action designs to successfully remediate impacted sites. Managed Phase I & II investigative projects. These projects included a wide variety of compliance issues and required familiarity with state and local hazardous waste management, water wells, fuel storage tanks, and groundwater and soil impact guidelines and regulations.

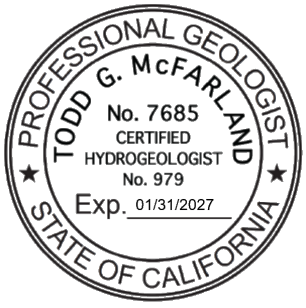
Dear Mr. McCaffrey:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Limited Site Investigation (LSI) report for the above referenced site. This assessment was performed in general accordance with our Task Order, dated January 31, 2025, and issued under the Master Service Agreement (MSA), dated September 15, 2022.



We appreciate the opportunity to perform these services for AYPA Power Development LLC. Please contact the undersigned at (909) 824-7311 if you have questions regarding the information provided in the report.

Sincerely,
Terracon Consultants, Inc.

MARICI – CITY OF INDUSTRY BESS – 16207 GALE AVENUE
16207 AND 16209 GALE AVENUE
CITY OF INDUSTRY, LOS ANGELES COUNTY, CALIFORNIA 91745
TERRACON PROJECT NO. LA247544B
MARCH 26, 2025

1.0 INTRODUCTION

1.1 Site Description

Site Name	Marici – City of Industry BESS – 16207 Gale Avenue
Site Location/Address	16207 and 16209 Gale Avenue, City of Industry, Los Angeles County, CA 91745
General Site Description	The site consists of an approximately 20,000-square-foot, single-story industrial building (constructed in 1962), on an approximately 1.06-acre parcel of land, identified by Los Angeles County Assessor Identification Numbers (AINS): 8242-016-044. The site is further improved with asphalt-paved parking areas and driveways, landscaping and utilities.

A topographic map and site diagram are included as **Exhibits 1** and **2** of **Appendix A**, respectively.

1.2 Scope of Work

Terracon conducted a Limited Site Investigation (LSI) at 16207 Gale Avenue, City of Industry, Los Angeles County, CA 91745 (the site). Based on the Phase I ESA prepared by Terracon, dated January 27, 2025 (Terracon Project No. LA247544.1), the following recognized environmental conditions (RECs), were identified:

Site Concern/ REC	Description
Current and Historical Site Operations	*Based on the longevity of industrial operations associated with a stainless-steel commercial appliance manufacturer (approximately 39 years) and lack of information concerning waste streams for the site, irregular asphalt patching in the pavement areas, the likely use of petroleum and solvents/chemicals as part of the historical operations represents a REC to the site.*
Eastern Adjoining Metal Cutting Service Operations	*Based on the longevity of the eastern adjoining Metal Cutting Service (16233 and 16235 Gale Avenue) operations (approximately 49 years), the likely use of solvents/chemicals as part of the current and historical operations and the proximity and relative topographic up-gradient position to the site, Metal Cutting Service represents a REC to the site.*

Site Within in Area of TCE and PCE Impacted Groundwater	*Based on the review of available records, the site is located within an area of TCE and PCE impacted groundwater above MCL; therefore the San Gabriel Valley (Area 4) represents a REC and a VEC to the site.*

The objective of the LSI was to assess the presence of chemicals commonly associated with the above-mentioned REC at concentrations above laboratory reporting and/or method detection limits in the on-site soil, and soil gas. Based on the findings of the Phase I ESA and documented groundwater impact associated with San Gabriel Valley (Area 4) in the vicinity of the site, an investigation of groundwater was not included in this scope of work.

1.3 Standard of Care

Terracon's services were performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions, or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory agencies, or other third parties supplying information used in the preparation of the report. These LSI services were performed in accordance with the scope of work agreed with you, our client, as reflected in our proposal and were not restricted by ASTM E1903-19.

1.4 Additional Scope Limitations

Findings, conclusions, and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, nondetectable, or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this LSI. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations, or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

1.5 Reliance

This report has been prepared for the exclusive use and reliance of AYPA Power Development LLC. Use or reliance by any other party is prohibited without the written authorization of AYPA Power Development LLC and Terracon. Reliance on the report by the client will be subject to the terms, conditions and limitations stated in the proposal, LSI report, and our agreement. Reliance on the LSI by AYPA Power Development LLC Will be subject to the terms contained in the Master Service Agreement with Terracon (dated September 15, 2022). The limitation of liability defined in the Master Service Agreement is the aggregate limit of Terracon's liability to AYPA Power Development LLC.

2.0 FIELD ACTIVITIES

Terracon's field activities were conducted on February 7, 17 & 19, 2025, by a Staff Geologist under the oversight of a California-licensed Professional Geologist (P.G.) with Terracon. A site-specific health and safety plan was utilized by Terracon during field activities for this assessment. A photolog of field activities is included as **Appendix C.**

2.1 Pre-Mobilization

On February 7, 2025, and more than 48 hours prior to drilling activities, Terracon marked the boring locations, and Terracon contacted USA DigAlert 811 (Ticket Numbers: A250380127-00A) for clearance of public underground utilities in accordance with California law.

2.2 Geophysical Survey

On February 17, 2025, SoCal Locators (SoCal) conducted a non-invasive geophysical survey using ground penetrating radar (GPR) and conductive locating equipment to further evaluate the possible underground utilities at the site. The geophysical survey was performed in the vicinity of each of the boring locations where mechanical drilling was to be performed. Proposed boring locations that were potentially in conflict with underground utilities were adjusted in the field. Significant subsurface anomalies or indication of components potentially associated with underground features were not identified.

2.3 Soil Borings and Soil Sampling

On February 17, 2025, JHA Remediation LLC. (JHA), a State-of-California C-57 licensed driller, advanced four (4) soil borings using a track-mounted direct push drill rig and/or hand-auger to a maximum depth of 20 feet below ground surface (bgs). The approximate boring locations are shown on **Exhibit 2** of **Appendix A** and are summarized below.

Location ID	Total Depth (feet bgs)	Sample Type	Assessment Area/REC
SGP-1 & SGP-4	5	Soil/Soil Gas	Northwestern and Southwestern portion of the site
SGP-2 & SGP-3	5/20	Soil/Soil Gas	West of the Metal-Cutting Service Facility

Soil samples were collected using new polyvinyl chloride (PVC) sleeves to prevent cross contamination and/or laboratory provided jar ware. Reusable drilling and sampling equipment were cleaned using an Alconox® or similar wash and two potable water rinses prior to the beginning of the project and before collecting each soil sample.

Soil samples were collected continuously to document soil lithology, color, moisture content, and staining. Evidence of staining or odors were not observed in the soil samples collected. Terracon screened the soil samples in the field using a calibrated MiniRae 3000 photoionization detector (PID) with a 10.6eV lamp to indicate the presence of total organic vapors (TOV). Prior to the start of field

activities, Terracon calibrated the PID in the field using a 100 parts per million by volume (ppmv) isobutylene gas standard and ambient air from upwind of the project activities. PID readings above the background level of 1.0 ppmv were not recorded in the soil encountered from the soil borings except for SGP-1 at 4 feet bgs with a reading of 1.9 ppmv. Reference boring logs on **Appendix D** for all field readings.

During soil sample collection, the soils encountered consisted primarily of silt with trace sand underlain by poorly graded sand in the soil borings. Detailed lithologic descriptions are presented on the soil boring logs included in **Appendix D**.

Following completion of the sampling activities, tubing was removed from the SGP boreholes and the boreholes were filled with hydrated bentonite chips and capped to match existing surface conditions.

2.4 Sampling Program

The soil sampling program consisted of the following:

- Collection of one soil sample from each SGP for a total of four (4) discrete soil samples. Soil samples submitted for laboratory analysis were collected from the target interval of each boring based on field observation and PID readings, and professional judgement. Additional soil samples were collected and placed on hold pending initial laboratory analysis.
- Collection of of six (6) total soil gas samples, two (2) soil gas samples from each deep soil boring and one (1) soil gas sample from each shallow soil boring. Soil gas samples were collected at the 5- and 20- foot intervals.

Soil sample intervals for each boring are provided on the lithologic boring logs included in **Appendix D.**

2.5 Soil Gas Probe Installation and Sampling

On February 17, 2024, Terracon installed two (2) single nested soil gas probes (SGP-1 and SGP-4) and two (2) dual-nested soil gas probes (SGP-2 & SGP-3) adjacent to the on-site building for the collection of soil gas samples. The approximate probe locations are shown on **Exhibit 2** of **Appendix A**.

Terracon's soil gas probe installation and soil gas sampling were conducted in general accordance with published guidance (CAL-EPA/DTSC, July 2015), as described below:

- The soil borings were completed as soil gas probes by installing a ½-inch diameter probe tip approximately 1-inch long at the target depths of 5 and/or 20 feet bgs. The probe tip was designed to be placed approximately halfway through a 1-foot sand pack extending from ½-foot above to ½-foot below the probe tip. Therefore, approximately ½-foot of sand was added to the soil boring prior to installing the probe tip.
- The sampling line connected to the probe tip was comprised of new dedicated 0.25-inch outer-diameter Nylaflow® tubing cut to length leaving approximately one foot of tubing extending from the surface at each probe. A gas tight valve was fitted to the up-hole end of the tubing to prevent ambient air from infiltrating the probe installation through the sample line. The sample tubing was marked at the ground surface to indicate the probe location, depth, and time of installation.
- Approximately ½-foot of sand was added after the installation of the probe tip to create a 1-foot sand pack surrounding the probe tip at the bottom of the boring. Approximately 1-foot of dry

granular bentonite chips were used to fill the borehole annular space around the Nylaflow® sampling line, from the top of the sand pack with hydrated granular bentonite chips from the top of the dry granular bentonite chips to the surface, or to the next probe depth. Sufficient water was added to hydrate the bentonite to ensure proper sealing, and care used in placement of the bentonite to prevent post-emplacement expansion which might compromise the probe seal.

2.6 Soil Gas Sampling Procedure

Soil gas sampling was performed a minimum of 2 hours following installation of the soil gas probes to allow subsurface conditions to equilibrate. Terracon's soil gas sampling program was conducted in general accordance with the Advisory Guidelines (CAL-EPA/DTSC, July 2015), as described below. The soil gas sampling field logs are included as **Appendix E**.

- Prior to purging or sampling of each probe, a shut-in test was conducted to check for leaks in the above-ground sampling system. The test was conducted by assembling the above-ground valves, lines, and fittings downstream from the top of the probe Nylaflow® tubing and evacuating it using a purge pump to a minimum measured vacuum of approximately 100 inches of water. The test was conducted while the sampling canister was attached with its valve in the closed position. The vacuum gauge connected to the system with a "T"-fitting was calibrated to be sensitive enough to indicate a water pressure change of 0.5 inches and was observed for at least one minute or longer. If any observable loss of vacuum was noted, the fittings would have been adjusted until the vacuum in the sample train did not noticeably dissipate. After a successful shut-in test, the sampling train was not altered.
- Each probe was purged prior to sample collection. The purge volume of each probe was estimated as the summation of the volumes of the Nylaflow® tubing sample line. The sampling assembly was purged a standard three volumes by drawing the soil gas from the probe using a portable pump regulated at a flow rate of 190mL/min.
- A leak test was performed in conjunction with each collected soil gas sample during purging and sampling activities to verify the integrity of the surface seal using 1,1-difluoroethane (1,1-DFA) as a tracer gas. Prior to sampling, 1,1-DFA was dispensed into a rag and placed near the surface seal.
- Once the sampling assembly was purged, the samples were collected from the sample line using laboratory provided 1-Liter Summa™ stainless-steel canisters (batch certified) fitted with a particulate filter regulated at a flow rate of approximately 150 milliliters per minute (mL/min).

Upon completion of the soil gas sampling activities, the soil gas probe tubing were was removed, and the void space was sealed with high-strength rapid set cement. Asphalt pavement was patched with concrete.

2.7 Investigation Derived Waste

Soil cuttings generated during the investigation activities were temporarily stored in a 5-gallon plastic bucket. Due to the relatively small quantity of drill cuttings (less than 5 gallons) and the absence of field evidence of significant impairment, the soil cuttings were spread on site. Investigation derived waste (IDW) was not generated. Sampling supplies and soil gas tubing were disposed off site as solid waste.

3.0 LABORATORY ANALYTICAL METHODS

The soil samples were sealed, properly labeled, and placed on ice in a cooler for transportation to the laboratory. The soil gas samples were collected in batch certified 1-Liter Summa canisters (and flow regulators) provided by the laboratory. The soil, groundwater, and soil gas samples and completed chain-of-custody forms were relinquished to SunStar Laboratories, Inc. (SunStar) in Lake Forest, California, a State-of-California ELAP-certified laboratory for analysis. Samples were submitted for analysis on standard turnaround time basis. The samples were analyzed using standard Environmental Protection Agency (EPA) methods, as detailed below:

Soil

- Total petroleum hydrocarbons (TPH), carbon chain by EPA Method 8015B; and
- Volatile organic compounds (VOCs) by EPA Method 8260B.
- Metals by EPA Method 6010

Soil Vapor

- VOCs by EPA Method TO-15.

The soil and soil gas laboratory analytical results are summarized in **Tables 1** through **3** of **Appendix B**, respectively. The laboratory analytical reports and executed chain-of-custody forms are provided in **Appendix F**.

4.0 DATA EVALUATION

Terracon screened the analytical data using the current residential and commercial Environmental Screening Levels (ESLs) published by San Francisco Bay Regional Water Quality Control Board (SFBRWQCB (2019, Rev. 2).[1] For analytes without an applicable ESL, EPA's Vapor Intrusion Screening Levels (VISLs)[2] were used to supplement the ESLs for the soil gas samples, as applicable and necessary.

The detection of an analyte at a concentration above a screening level does not necessarily indicate an adverse impact to human health or the environment; however, an exceedance of a screening level may indicate that additional investigation is warranted.

4.1 Soil Analytical Results – TPH and VOCs

The soil analytical results indicate VOCs, TPH gasoline range organics (TPH-GRO), diesel range organics (TPH-DRO), and motor oil range organics (TPH-MORO) were not detected above laboratory reporting limits (RLs).

[1] *San Francisco Regional Water Quality Control Board, 2019, Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels, 2019, Rev 2).*
[2] *U.S.EPA, Vapor Intrusion Screening Levels (VISLs), Residential and Commercial Cancer Risk, May 14, 2024.*

The TPH and VOC soil data is tabulated in **Table** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F**.

4.2 Soil Analytical Results – Metals

The soil analytical results indicated metals were not detected above the specified laboratory RLs with the exception of **arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium** and **zinc**. The concentrations of the listed metals are within the range of naturally occurring "background" concentrations[3], and/or were below residential, commercial, and construction worker ESLs except for **Arsenic,** which was detected in one sample, SGP-3-2.5

- **Arsenic** was detected in soil sample SGP-3-2.5 at a concentration of **5.0 mg/kg,** which exceeds the cancer residential ESL (*0.067 mg/kg),* commercial ESL (*0.31 mg/kg)* and construction worker ESL (*2 mg/kg).*

The ESLs are based on toxicity values and as such, the arsenic ESLs are very low. Since the naturally occurring arsenic concentrations in soil for southern California (and other regions) are often 100 times greater than screening levels, based on analyses of soil data, DTSC established a regional background arsenic concentration. Based on statistically review of arsenic data sets, the DTSC established an upper-bound arsenic concentration of *12 mg/Kg* for Southern California[4]. Using this regional background concentration, the detected arsenic concentrations are within the naturally occurring "background" concentrations.

The metal soil data is tabulated in **Table 2** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F**.

4.3 Soil Gas Analytical Results – TPH & VOCs

Soil gas sample analytical results indicate that several VOCs were detected above their respective laboratory method detection limits (MDLs). The soil gas sample analytical results were compared to the ESLs, which revealed that concentrations of **1,1,2,2-Tetrachloroethane, 1,3-Butadiene, Benzene**, **tetrachloroethane (PCE),** and **trichloroethene (TCE)** were detected in one or more samples above their respective ESLs for residential or commercial land use, as detailed below:

- **1,1,2,2-Tetrachloroethane** was detected in soil gas sample SGP-2-5, at a concentration of **6.3J**[5] **micrograms per cubic meter (µg/m³),** which exceeds the residential ESL (*1.61 µg/m³*), but is below the commercial ESL (*7.05 µg/m³*).

- **1,3-Butadiene** was detected in soil gas sample SGP-3-20 at a concentration of **7.1 µg/m³**, which exceeds the residential ESL (*3.12 µg/m³*), but is below the commercial ESL (*13.6 µg/m³*).

[3] *EPA, 2007, Guidance for Developing Ecological Soil Screening Levels, OSWER Directive 92857-55, Attachment 1-4, November 2003 (Revised July 2007).*

[4] *California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), 2020, Human Health Risk Assessment (HHRA) Note Number 11, Southern California Ambient Arsenic Screening Level, December 28, 2020.*

[5] *J = Estimated value above the laboratory method detection limit and below the laboratory reporting limit.*

- **Benzene** was detected in all soil gas samples except SGP-3-20. Soil gas sample SGP-1-5 and SGP-2-20 concentrations of **13** and **4.0 µg/m³**, respectively, exceeds the residential ESL (*3.2 µg/m³*). Soil gas sample SGP-2-5, SGP-3-5 and SGP-4-5 concentrations range from **16** to **23 µg/m³,** respectively, which exceeds the residential ESL (*3.2 µg/m³*), and the commercial ESL (*14 µg/m³*).

- **PCE** was detected in all soil gas samples, except SGP-3-5. Soil gas sample SGP-2-5 and SGP-4-5 concentration of **37 µg/m³**and **24 µg/m³**, respectively, exceeds the residential ESL (*15 µg/m³*), but are below the commercial ESL (*67 µg/m³*). PCE was detected in samples SGP-2-20 and SGP-3-20 at a concentration of **100 µg/m³** which exceeds both the commercial and residential ESLs.

- **TCE** was detected in each soil gas sample with concentrations ranging from **19** to **75 µg/m³**, which exceeds the residential ESL (*16 µg/m³*), but are below the commercial ESL (*100 µg/m³*).

The analytical results for soil gas are summarized in **Table 3** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F.**

4.4 Quality Control/Quality Assurance

Quality control/quality assurance (QC/QA) of analytical data was maintained using the following methods and procedures:

- Established reporting limits (RLs) and method detection limits (MDLs) with the laboratory that meet data quality objectives (DQOs);
- Laboratory QA/QC controls, such as laboratory control standard (LCS), matrix spike (MS), and matrix spike duplicate (MSD);
- Collection of samples in laboratory provided containers, or new PVC liners;
- Chain-of-custody protocols;
- Storage and transportation of soil samples in secured, chilled containers; and
- Decontamination of reusable sampling equipment.

Additionally, Terracon utilized 1,1-difluoroethane (1,1-DFA) as a tracer gas to verify the integrity of the surface seal for the soil gas samples. According to the CAL-EPA/DTSC guidance (July 2015), the default allowable concentration of 1,1-DFA is 10 times the reporting limit (27 µg/m³), or a threshold of 270 µg/m³. Detection of a tracer gas in soil gas samples above the threshold indicates a leak may have occurred during sampling resulting in a potential dilution of concentrations.

Based on the successful shut-in tests, nondetectable 1,1-DFA concentrations, and comparable VOC concentrations in soil gas samples without the presence of trace gas, any dilution appears to be minimal and the data meets data quality objectives (DQOs). Any discrepancy in the laboratory QC/QA is notated in the laboratory reports, which are included as **Appendix F**.

5.0 FINDINGS AND CONCLUSIONS

The findings from this LSI are as follows:

Soil

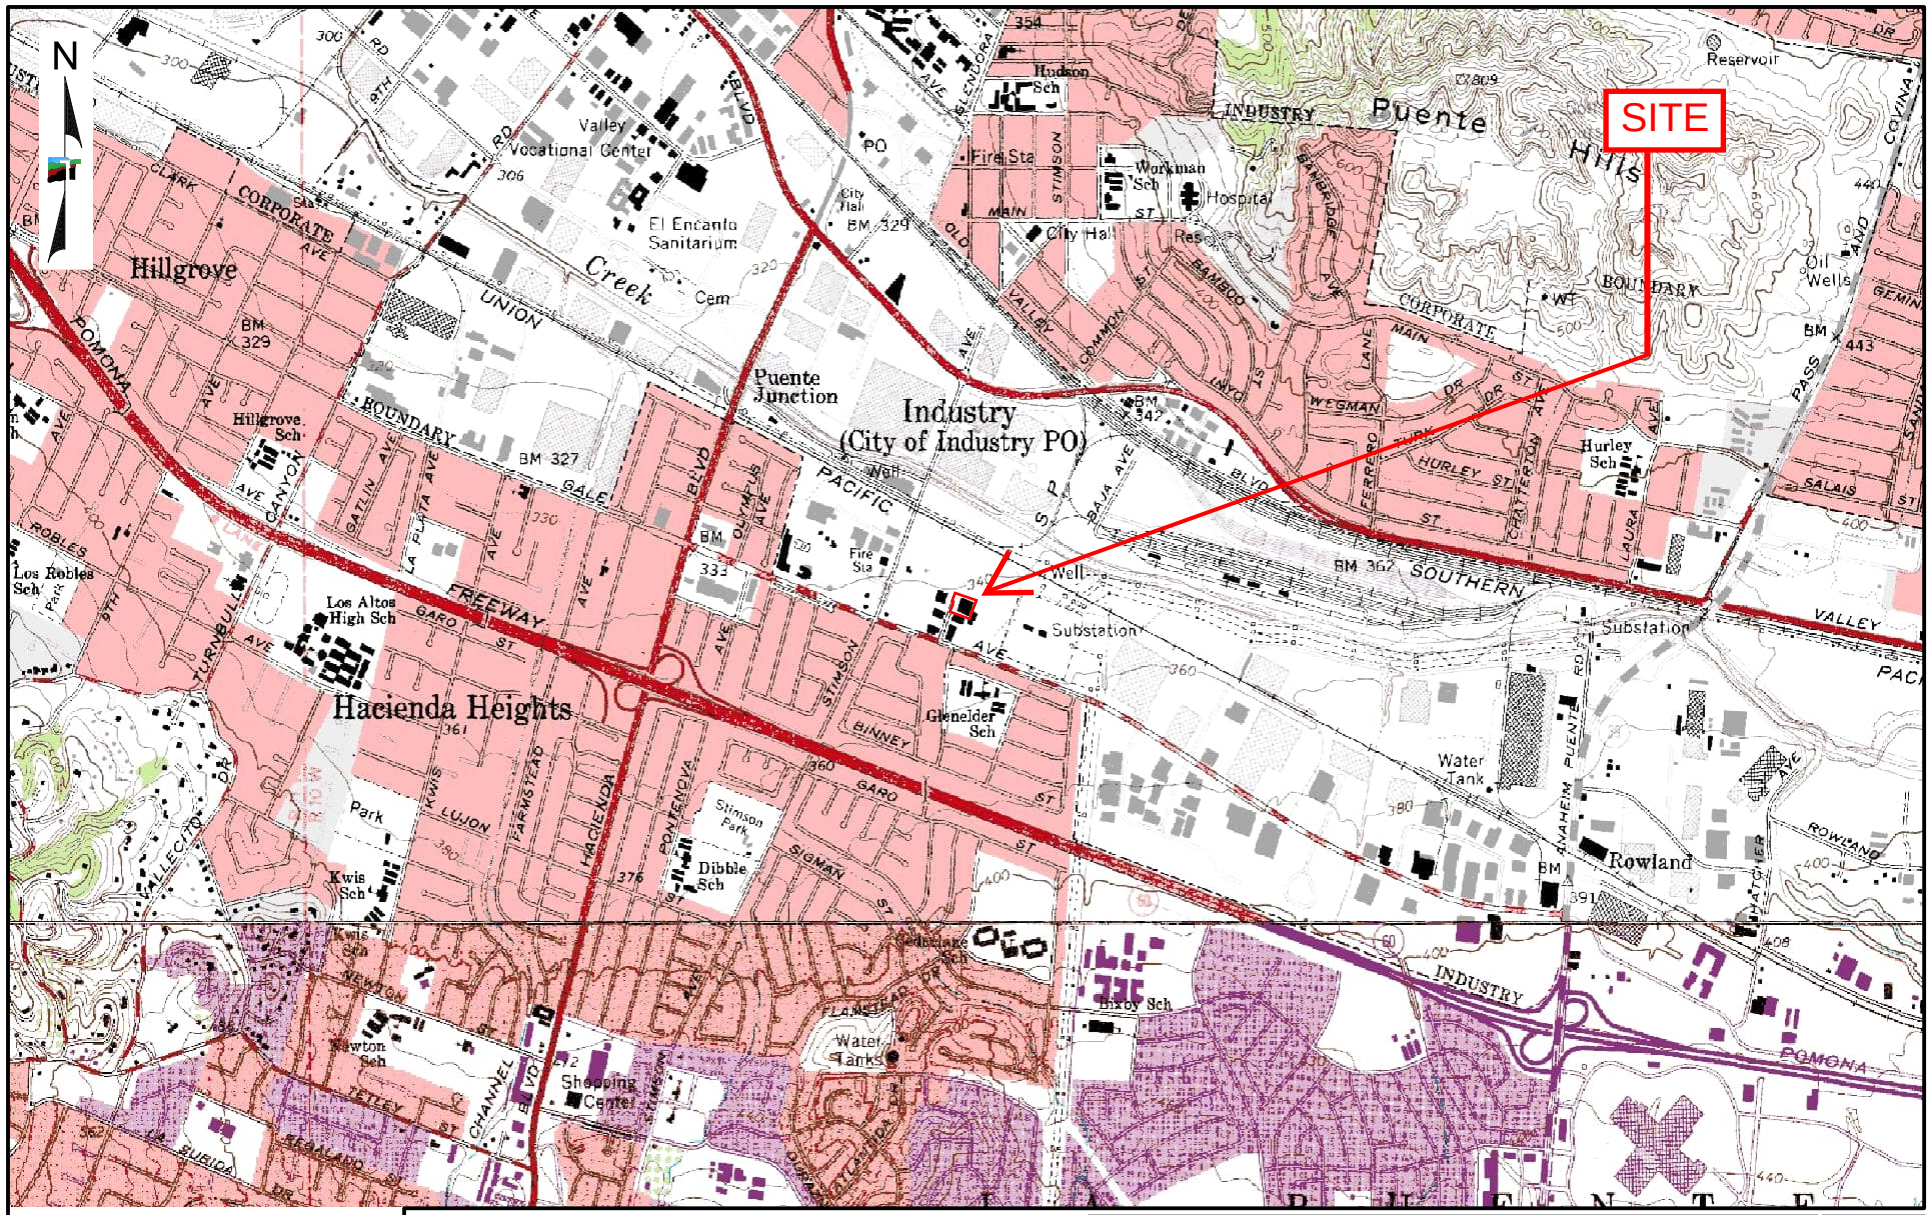
- The soils encountered consisted primarily of silt with gravel underlain by clayey silt to the maximum depth sampled of 60 feet bgs.
- Observed soils indicated no staining or odor, and PID readings were not measured above 1.0 ppm except for SGP-1 at 4 feet with a concentration of 1.9 ppmv.
- **TPH** and **VOCs** were not detected above laboratory RLs in the soil samples analyzed.
- Metals are within the range of naturally occurring "background" concentrations, and are below residential, commercial, and construction worker screening levels except for **Arsenic** which was detected in one sample above the ESLs, but within the DTSC established upper-bound arsenic concentration of *12 mg/Kg* for Southern California. Using this regional background concentration, the detected arsenic concentration is within the naturally occurring "background" concentrations.
- No IDW was generated during drilling operations.

Soil Gas

- **1,1,2,2,-Tetrachloroethane, 1,3-Butadiene**, **Benzene**, **PCE**, and **TCE** were detected at concentrations above their respective ESLs for residential and/or commercial land use in soil gas samples collected.

Based on the field observations and laboratory data, significantly impacted soils and soil gas were not identified in the areas and depths investigated.

The concentrations of **1,1,2,2,-Tetrachloroethane, 1,3-Butadiene, Benzene**, **PCE** and **TCE** above residential and/or commercial ESLs were detected in soil gas samples collected from soil gas probes located throughout the site. Based on the absence of VOCs and petroleum hydrocarbons in the on-site shallow soil, and the documented groundwater plume associated with San Gabriel Valley (Area 4) in the vicinity of the site, it appears likely that the detected VOCs in soil gas may be associated with impacted groundwater from off-site regional sources. Additionally, it should be noted that the concentrations of VOCs in soil gas are generally increasing with depth, which further supports a likely groundwater source.



6.0 RECOMMENDATIONS

Based on the data, additional investigation does not appear warranted at this time. Terracon understands AYPA Power Development LLC. plan to develop the property as a Battery Energy Storage System (BESS) substation and no occupied buildings will be constructed on-site.

Notes:
EPA = United States Environmental Protection Agency
All units are in milligrams per kilogram (mg/Kg), unless specified
bgs= below ground surface
All units are in milligrams per kilogram (mg/Kg)
-- = Not analyzed/not available/not established; or omitted based on ND laboratory results
"<" = less than the laboratory reporting limit, or method detection limit, as specified
Bold = concentration above the laboratory report limit (RL), or above the laboratory method detection limit (MDL)
CAM = California Adminstrative Manual (also know as Title 22 metals)
* DTSC. Determination of a Southern California Regional Background Arsenic Concentration in Soil. Upper-bound arsenic concentration of 12 mg/Kg for Los Angeles County. Concentrations at or below this level are considered background concentrations.

Screening Levels
(1) ESLs = San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (2019, Rev.2), Summary of Soil ESLs, Direct Exposure Human Health Risk Levels, Residential and Commercial/Industrial Shallow Soil Exposure, Table S-1.
(2) EPA, 1995, Engineering Forum Issue, Determination of Background Concentrations of Inorganics in Soils and Sediments at Hazardous Waste Sites, EPA/540/S-96/500, December 1995.
(2) EPA, 2007, Guidance for Developing Ecological Soil Screening Levels, OSWER Directive 92857-55, Attachment 1-4, November 2003 (Revised July 2007).
Analyte concentration exceeds the standard for:
Concentration Reported Above Residential ESL.
Concentration Reported Above Commercial / Industrial Limit
Concentration Reported Above Construction Worker Limit

APPENDIX D
BORING LOGS

WELL LOG NO. SGP-1

PROJECT: Marici - City of Industry BESS - 16207 Gale Avenue

CLIENT: AYPA Power Development LLC
Austin, Texas

SITE: 16207 and 16209 Gale Avenue
City of Industry, California, 91745

LOCATION See Exhibit A-2

DEPTH	MATERIAL DESCRIPTION	INSTALLATION DETAILS (Well Completion)	DEPTH (ft)	WATER LEVEL OBSERVATIONS	SAMPLE TYPE	RECOVERY (%)	OVA/PID (ppm)
0.3	**ASPHALT**						
	ML - SILT (ML), trace sand, fine grained, brown, no odor, dry, no staining	1/4" - inch outer diameter Nylaflow tubing with Hydrated Bentonite Seal					
						100	0.9
		Probe tip set at 5 feet bgs in #3 sand	5			100	1.9
5.5	***Boring Terminated at 5.5 Feet***						

The stratification lines represent the approximate transition between differing soil types and/or rock types; in-situ these transitions may be gradual or may occur at different depths than shown.

Advancement Method:
Direct Push Technology

Abandonment Method:
Boring backfilled with bentonite chips upon completion.

See Appendices for description of field procedures.
See Appendices for description of laboratory procedures and additional data (if any).
See Appendices for explanation of symbols and abbreviations.

Notes:
Borings converted to temporary soil gas probes at 5 feet bgs

Notes:

Initial summa canister vacuum should be -28 to -30 inches of Hg. Do not use canister if initial vacuum is -27 inches of Hg or less.
in Hg = inches of mercury
inWC = inches of water column
If over 10in Hg not a good sample
Leak check = approximately 7.35 in Hg (or 100inWC) for 1 minute
0.40 SCFH = 188.78 mL/min

Purge Volumes (PV)	1PV	3PV	7PV
6" Subslab	18 mL	55mL	129 mL
5' Soil Gas	264 mL	791 mL	1845 mL
10' Soil Gas	288 mL	863 mL	2015 mL
20' Soil Gas	336 mL	1009 mL	2353 mL

*Purge volume calculated include tubing with sand pack (assuming 30% porosity)

*Standard purge time = 3PV / flow rate

Jeff Lee

From: Marin, Jose <Jose.Marin@terracon.com>
Sent: Friday, February 21, 2025 11:13 AM
To: Jeff Lee
Cc: Perdikis, Alex
Subject: 16207 Gale and 16233 Gale Project Site.
Attachments: SKM_C251i25022017150.pdf

Jeff,

Per phone conversation, see attached. See below for summary :

LA247544B – 16207 Gale Avenue

- Run TPH and VOCs on SGP-1-2.5, SGP-2-5, SGP-3-2.5, SGP-4-5.
- Run CAM – 17 Metals on SGP-2-2.5 and SGP-3-2.5

LA247544C – 16233 Gale Avenue

- Run TPH and VOCs on SGP-1-2.5, SGP-2-5, SGP-3-2.5, SGP-4-5, SGP-5-2.5 and SGP-6-5
- Run CAM – 17 Metals on SGP-4-2.5 and SGP-1-2.5

All sample to be run on standard TAT. Let me know if you have any questions/concerns.

Notes and Definitions

J	Detected but below the Standard Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the Method Detection Limit (MDL)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

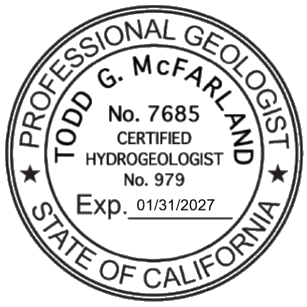
Dear Mr. McCaffrey:

Terracon Consultants, Inc. (Terracon) is pleased to submit the enclosed Limited Site Investigation (LSI) report for the above referenced site. This assessment was performed in general accordance with our Task Order, dated January 29, 2025 and issued under the Master Service Agreement (MSA), dated September 15, 2022.



We appreciate the opportunity to perform these services for AYPA Power Development LLC. Please contact the undersigned at (909) 824-7311 if you have questions regarding the information provided in the report.

Sincerely,
Terracon Consultants, Inc.

Jose Marin

1.0 INTRODUCTION

1.1 Site Description

Site Name	Marici – City of Industry BESS – 16233 Gale Avenue
Site Location/Address	16233 and 16235 Gale Avenue, City of Industry, Los Angeles County, CA 91745
General Site Description	The site consists of an approximately 10,200-square-foot, single-story industrial building (constructed in 1957), on the northern portion of the site and an approximately 16,300-square-foot two story industrial building on the southern portion of the site (constructed in approximately 1990), on an approximately 1.73-acre parcel of land, identified by Los Angeles County Assessor Identification Numbers (AINS): 8242-016-033, 8242-016-034, and 8242-016-036. The site is further improved with asphalt-paved parking areas and driveways, landscaping, and utilities.

A topographic map and site diagram are included as **Exhibits 1** and **2** of **Appendix A**, respectively.

1.2 Scope of Work

Terracon conducted a Limited Site Investigation (LSI) at 16233 Gale Avenue, City of Industry, Los Angeles County, CA 91745 (the site). Based on the Phase I ESA prepared by Terracon, dated January 27, 2025 (Terracon Project No. LA247544.2), the following recognized environmental conditions (RECs), were identified:

Site Concern/ REC	Description
Current and Historical Site *Operations*	*Based on the longevity of business operations (approximately 49 years), the likely use of petroleum and solvents/chemicals as part of the current and historical operations at the site, and the potential release of hazardous substances, the on-site Metal Cutting Service facility represents a REC to the site.*
Site Within in Area of TCE and PCE Impacted Groundwater	*Based on the review of available records, the site is located within an area of TCE and PCE impacted groundwater above MCL; therefore the San Gabriel Valley (Area 4) represents a REC and a VEC to the site.*

The objective of the LSI was to assess the presence of chemicals commonly associated with the above-mentioned REC at concentrations above laboratory reporting and/or method detection limits in the on-site soil, and soil gas. Based on the findings of the Phase I ESA and documented groundwater impact associated with San Gabriel Valley (Area 4) in the vicinity of the site, an investigation of groundwater was not included in this scope of work.

1.3 Standard of Care

Terracon's services were performed in a manner consistent with generally accepted practices of the profession undertaken in similar studies in the same geographical area during the same time period. Terracon makes no warranties, either express or implied, regarding the findings, conclusions, or recommendations. Please note that Terracon does not warrant the work of laboratories, regulatory agencies, or other third parties supplying information used in the preparation of the report. These LSI services were performed in accordance with the scope of work agreed with you, our client, as reflected in our proposal and were not restricted by ASTM E1903-19.

1.4 Additional Scope Limitations

Findings, conclusions, and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, nondetectable, or not present during these services, and we cannot represent that the site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this LSI. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations, or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

1.5 Reliance

This report has been prepared for the exclusive use and reliance of AYPA Power Development LLC Use or reliance by any other party is prohibited without the written authorization of AYPA Power Development LLC and Terracon. Reliance on the report by the client will be subject to the terms, conditions and limitations stated in the proposal, LSI report, and our agreement. Reliance on the LSI by AYPA Power Development LLC Will be subject to the terms contained in the Master Service Agreement with Terracon (dated September 15, 2022). The limitation of liability defined in the Master Service Agreement is the aggregate limit of Terracon's liability to AYPA Power Development LLC.

2.0 FIELD ACTIVITIES

Terracon's field activities were conducted on February 7,17 & 19, 2025, by a Staff Geologist under the oversight of a California-licensed Professional Geologist (P.G.) with Terracon. A site-specific health and safety plan was utilized by Terracon during field activities for this assessment. A photolog of field activities is included as **Appendix C.**

2.1 Pre-Mobilization

On February 7, 2025, and more than 48 hours prior to drilling activities, Terracon marked the boring locations, and Terracon contacted USA DigAlert 811 (Ticket Numbers: A250380120-01A) for clearance of public underground utilities in accordance with California law.

2.2 Geophysical Survey

On February 17, 2025, SoCal Locators (SoCal) conducted a non-invasive geophysical survey using ground penetrating radar (GPR) and conductive locating equipment to further evaluate the possible underground utilities at the site. The geophysical survey was performed in the vicinity of each of the boring locations where mechanical drilling was to be performed. Proposed boring locations that were potentially in conflict with underground utilities were adjusted in the field. Significant subsurface anomalies or indication of components potentially associated with underground features were not identified.

2.3 Soil Borings and Soil Sampling

On February 17, 2025, JHA Remediation LLC. (JHA), a State-of-California C-57 licensed driller, advanced six (6) soil borings using a track-mounted direct push drill rig and/or hand-auger to a maximum depth of 20 feet below ground surface (bgs). The approximate boring locations are shown on **Exhibit 2** of **Appendix A** and are summarized below.

Location ID	Total Depth (feet bgs)	Sample Type	Assessment Area/REC
SGP-1 & SGP-4	5/20	Soil/Soil Gas	Northern and Central portion of the site
SGP-2, SGP-3, SGP-5 and SGP-6	5	Soil/Soil Gas	East of the Metal-Cutting Service Facility

Soil samples were collected using new polyvinyl chloride (PVC) sleeves to prevent cross contamination and/or laboratory provided jar ware. Reusable drilling and sampling equipment were cleaned using an Alconox® or similar wash and two potable water rinses prior to the beginning of the project and before collecting each soil sample.

Soil samples were collected continuously to document soil lithology, color, moisture content, and staining. Evidence of staining or odors were not observed in the soil samples collected. Terracon screened the soil samples in the field using a calibrated MiniRae 3000 photoionization detector (PID) with a 10.6eV lamp to indicate the presence of total organic vapors (TOV). Prior to the start of field activities, Terracon calibrated the PID in the field using a 100 parts per million by volume (ppmv) isobutylene gas standard and ambient air from upwind of the project activities. PID readings above the background level of 1.0 ppmv were not recorded in the soil encountered from the soil borings. Reference boring logs on **Appendix D** for all field readings.

During soil sample collection, the soils encountered consisted primarily of silt with trace sand in the soil borings. Detailed lithologic descriptions are presented on the soil boring logs included in **Appendix D**.

Following completion of the sampling activities, tubing was removed from the SGP borings and the boreholes were filled with hydrated bentonite chips and capped to match existing surface conditions.

2.4 Sampling Program

The soil sampling program consisted of the following:

- Collection of one soil sample from each SGP for a total of six (6) discrete soil samples. Soil samples submitted for laboratory analysis were collected from the target interval of each boring based on field observation and PID readings, and professional judgement. Additional soil samples were collected and placed on hold pending initial laboratory analysis.
- Collection of eight (8) total soil gas samples; two (2) soil gas samples from each deep soil boring and one (1) soil gas sample from each shallow soil boring. Soil gas samples were collected at the 5- and 20- foot intervals.

Soil sample intervals for each boring are provided on the lithologic boring logs included in **Appendix D.**

2.5 Soil Gas Probe Installation and Sampling

On February 17, 2024, Terracon installed four (4) soil gas probes (SGP-2, SGP-3, SGP-5 and SGP-6) and two (2) dual-nested soil gas probes (SGP-1 & SGP-4) adjacent to the on-site buildings for the collection of soil gas samples. The approximate probe locations are shown on **Exhibit 2** of **Appendix A**.

Terracon's soil gas probe installation and soil gas sampling were conducted in general accordance with published guidance (CAL-EPA/DTSC, July 2015), as described below:

- The soil borings were completed as soil gas probes by installing a ½-inch diameter probe tip approximately 1-inch long at the target depths of 5 and/or 20 feet bgs. The probe tip was designed to be placed approximately halfway through a 1-foot sand pack extending from ½-foot above to ½-foot below the probe tip. Therefore, approximately ½-foot of sand was added to the soil boring prior to installing the probe tip.
- The sampling line connected to the probe tip was comprised of new dedicated 0.25-inch outer-diameter Nylaflow® tubing cut to length leaving approximately one foot of tubing extending from the surface at each probe. A gas tight valve was fitted to the up-hole end of the tubing to prevent ambient air from infiltrating the probe installation through the sample line. The sample tubing was marked at the ground surface to indicate the probe location, depth, and time of installation.
- Approximately ½-foot of sand was added after the installation of the probe tip to create a 1-foot sand pack surrounding the probe tip at the bottom of the boring. Approximately 1-foot of dry granular bentonite chips were used to fill the borehole annular space around the Nylaflow® sampling line, from the top of the sand pack with hydrated granular bentonite chips from the top of the dry granular bentonite chips to the surface, or to the next probe depth. Sufficient water was added to hydrate the bentonite to ensure proper sealing, and care used in placement of the bentonite to prevent post-emplacement expansion which might compromise the probe seal.

2.6 Soil Gas Sampling Procedure

Soil gas sampling was performed a minimum of 2 hours following installation of the soil gas probes to allow subsurface conditions to equilibrate. Terracon's soil gas sampling program was conducted in general accordance with the Advisory Guidelines (CAL-EPA/DTSC, July 2015), as described below. The soil gas sampling field logs are included as **Appendix E**.

- Prior to purging or sampling of each probe, a shut-in test was conducted to check for leaks in the above-ground sampling system. The test was conducted by assembling the above-ground valves, lines, and fittings downstream from the top of the probe Nylaflow® tubing and evacuating it using a purge pump to a minimum measured vacuum of approximately 100 inches of water. The test was conducted while the sampling canister was attached with its valve in the closed position. The vacuum gauge connected to the system with a "T"-fitting was calibrated to be sensitive enough to indicate a water pressure change of 0.5 inches and was observed for at least one minute or longer. If any observable loss of vacuum was noted, the fittings would have been adjusted until the vacuum in the sample train did not noticeably dissipate. After a successful shut-in test, the sampling train was not altered.
- Each probe was purged prior to sample collection. The purge volume of each probe was estimated as the summation of the volumes of the Nylaflow® tubing sample line. The sampling assembly was purged a standard three volumes by drawing the soil gas from the probe using a portable pump regulated at a flow rate of 190mL/min.
- A leak test was performed in conjunction with each collected soil gas sample during purging and sampling activities to verify the integrity of the surface seal using 1,1-difluoroethane (1,1-DFA) as a tracer gas. Prior to sampling, 1,1-DFA was dispensed into a rag and placed near the surface seal.
- Once the sampling assembly was purged, the samples were collected from the sample line using laboratory provided 1-Liter Summa™ stainless-steel canisters (batch certified) fitted with a particulate filter regulated at a flow rate of approximately 150 milliliters per minute (mL/min).

Upon completion of the soil gas sampling activities, the soil gas probe tubing and VaporPin® probes were removed, and the void space was sealed with high-strength rapid set cement. Asphalt pavement was patched with concrete.

2.7 Investigation Derived Waste

Soil cuttings generated during the investigation activities were temporarily stored in a 5-gallon plastic bucket. Due to the relatively small quantity of drill cuttings (less than 5 gallons) and the absence of field evidence of significant impairment, the soil cuttings were spread on site. Investigation derived waste (IDW) was not generated. Sampling supplies and soil gas tubing were disposed off site as solid waste.

3.0 LABORATORY ANALYTICAL METHODS

The soil and soil gas samples were sealed, properly labeled, and placed on ice in a cooler for transportation to the laboratory. The soil gas samples were collected in batch certified 1-Liter Summa canisters (and flow regulators) provided by the laboratory. The soil and soil gas samples and completed chain-of-custody forms were relinquished to SunStar Laboratories, Inc. (SunStar) in Lake Forest,

California, a State-of-California ELAP-certified laboratory for analysis. Samples were submitted for analysis on standard turnaround time basis. The samples were analyzed using standard Environmental Protection Agency (EPA) methods, as detailed below:

Soil

- Total petroleum hydrocarbons (TPH), carbon chain by EPA Method 8015B; and
- Volatile organic compounds (VOCs) by EPA Method 8260B.
- Metals by EPA Method 6010

Soil Vapor

- VOCs by EPA Method TO-15.

The soil and soil gas laboratory analytical results are summarized in **Tables 1** through **3** of **Appendix B**, respectively. The laboratory analytical reports and executed chain-of-custody forms are provided in **Appendix F**.

4.0 DATA EVALUATION

Terracon screened the analytical data using the current residential and commercial Environmental Screening Levels (ESLs) published by San Francisco Bay Regional Water Quality Control Board (SFBRWQCB (2019, Rev. 2).[1] For analytes without an applicable ESL, EPA's Vapor Intrusion Screening Levels (VISLs)[2] were used to supplement the ESLs for the soil gas samples, as applicable and necessary.

The detection of an analyte at a concentration above a screening level does not necessarily indicate an adverse impact to human health or the environment; however, an exceedance of a screening level may indicate that additional investigation is warranted.

4.1 Soil Analytical Results – TPH and VOCs

The soil analytical results for VOCs, TPH gasoline range organics (TPH-GRO) and diesel range organics (TPH-DRO) were not detected above laboratory reporting limits (RLs). Motor oil range organics (TPH-MORO) was detected above its respective laboratory reporting limit in one soil sample (SGP-1-2.5) but below its residential and commercials ESLs. The remaining samples were below the specified laboratory reporting limits for each constituent analyzed.

The TPH and VOC soil data is tabulated in **Table 1** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F**.

[1] *San Francisco Regional Water Quality Control Board, 2019, Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels, 2019, Rev 2).*
[2] *U.S.EPA, Vapor Intrusion Screening Levels (VISLs), Residential and Commercial Cancer Risk, May 14, 2024.*

4.2 Soil Analytical Results – Metals

The soil analytical results indicated metals were not detected above the specified laboratory RLs with the exception of **arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium** and **zinc**. The concentrations of the listed metals are within the range of naturally occurring "background" concentrations[3], and/or were below residential, commercial, and construction worker ESLs except for **Arsenic,** which was detected in one sample, SGP-1-2.5.

- **Arsenic** was detected in soil sample SGP-1-2.5 at a concentration of **3.9 mg/kg,** which exceeds the cancer residential ESL (*0.067 mg/kg),* commercial ESL (*0.31 mg/kg)* and construction worker ESL (*2 mg/kg).*

The ESLs are based on toxicity values and as such, the arsenic ESLs are very low. Since the naturally occurring arsenic concentrations in soil for southern California (and other regions) are often 100 times greater than screening levels, based on analyses of soil data, DTSC established a regional background arsenic concentration. Based on statistically review of arsenic data sets, the DTSC established an upper-bound arsenic concentration of *12 mg/Kg* for Southern California[4]. Using this regional background concentration, the detected arsenic concentration is within the naturally occurring "background" concentrations.

The metal soil data is tabulated in **Table 2** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F**.

4.3 Soil Gas Analytical Results – TPH & VOCs

Soil gas sample analytical results indicate that several VOCs were detected above their respective laboratory method detection limits (MDLs). The soil gas sample analytical results were compared to the ESLs, which revealed that concentrations of **1,3-Butadiene, Benzene**, **Ethylbenzene,** and **Tetrachloroethene (PCE) and Trichloroethene (TCE)** were detected in one or more samples above their respective ESLs for residential or commercial land use, as detailed below:

- **1,3-Butadiene** was detected in soil gas samples SGP-1-5 at a concentration of **12 micrograms per cubic meter (µg/m³)**, which exceeds the residential ESL (*3.12 µg/m³*), but is below the commercial ESL (*13.6 µg/m³*).

- **Benzene** was detected in each soil gas sample except for SGP-2-5 and SGP-4-20. Samples SGP-1-20, SGP-4-5 and SGP-6-5 concentrations range from **4.2** through **12 µg/m³** which exceeds the residential ESL (*3.2 µg/m³*), and samples SGP-1-5, SGP-3-5 and SGP-5-5 concentrations range from **21** to **48 µg/m³**, which exceed the residential ESL (*3.2 µg/m³*), and the commercial ESL (*14 µg/m³*).

- **Ethylbenzene** was detected in soil gas samples SGP-1-5 at a concentration of **130 µg/m³**, which exceeds the residential ESL (*37 µg/m³*), but is below the commercial ESL (*160 µg/m³*).

[3] *EPA, 2007, Guidance for Developing Ecological Soil Screening Levels, OSWER Directive 92857-55, Attachment 1-4, November 2003 (Revised July 2007).*

[4] *California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), 2020, Human Health Risk Assessment (HHRA) Note Number 11, Southern California Ambient Arsenic Screening Level, December 28, 2020.*

- **PCE** was detected in each soil gas sample. Sample SGP-1-5, SGP-1-20, SGP-4-5, SGP-4-20 and SGP-6-5 concentration range from **140** through **2,500 µg/m³**, which exceeds the residential ESL (*15 µg/m³*) and the commercial ESL (*67 µg/m³*). The remaining samples were below the residential and commercial ESLs.

- **TCE** was detected in each soil gas sample except for SGP-2-5. Samples SGP-1-5, SGP-3-5, SGP-5-5 and SGP-6-5 concentrations range from **18** through **58 µg/m³** which exceeds the residential ESL (*16 µg/m³*), and samples SGP-1-20, SGP-4-5 and SGP-4-20 concentrations range from **170** to **3,500 µg/m³**, which exceed the residential ESL (*16 µg/m³*), and the commercial ESL (*100 µg/m³*).

The analytical results for soil gas are summarized in **Table 3** of **Appendix B** and the laboratory analytical report and chain-of-custody forms are included in **Appendix F.**

4.4 Quality Control/Quality Assurance

Quality control/quality assurance (QC/QA) of analytical data was maintained using the following methods and procedures:

- Established reporting limits (RLs) and method detection limits (MDLs) with the laboratory that meet data quality objectives (DQOs);
- Laboratory QA/QC controls, such as laboratory control standard (LCS), matrix spike (MS), and matrix spike duplicate (MSD);
- Collection of samples in laboratory provided containers, or new PVC liners;
- Chain-of-custody protocols;
- Storage and transportation of soil samples in secured, chilled containers;
- Decontamination of reusable sampling equipment;

Additionally, Terracon utilized 1,1-difluoroethane (1,1-DFA) as a tracer gas to verify the integrity of the surface seal for the soil gas samples. According to the CAL-EPA/DTSC guidance (July 2015), the default allowable concentration of 1,1-DFA is 10 times the reporting limit (27 µg/m³), or a threshold of 270 µg/m³. Detection of a tracer gas in soil gas samples above the threshold indicates a leak may have occurred during sampling resulting in a potential dilution of concentrations.

Based on the successful shut-in tests, nondetectable 1,1-DFA concentrations, and comparable VOC concentrations in soil gas samples without the presence of trace gas, any dilution appears to be minimal and the data meets data quality objectives (DQOs). Any discrepancy in the laboratory QC/QA is notated in the laboratory reports, which are included as **Appendix F**.

5.0 FINDINGS AND CONCLUSIONS

The findings from this LSI are as follows:

Soil

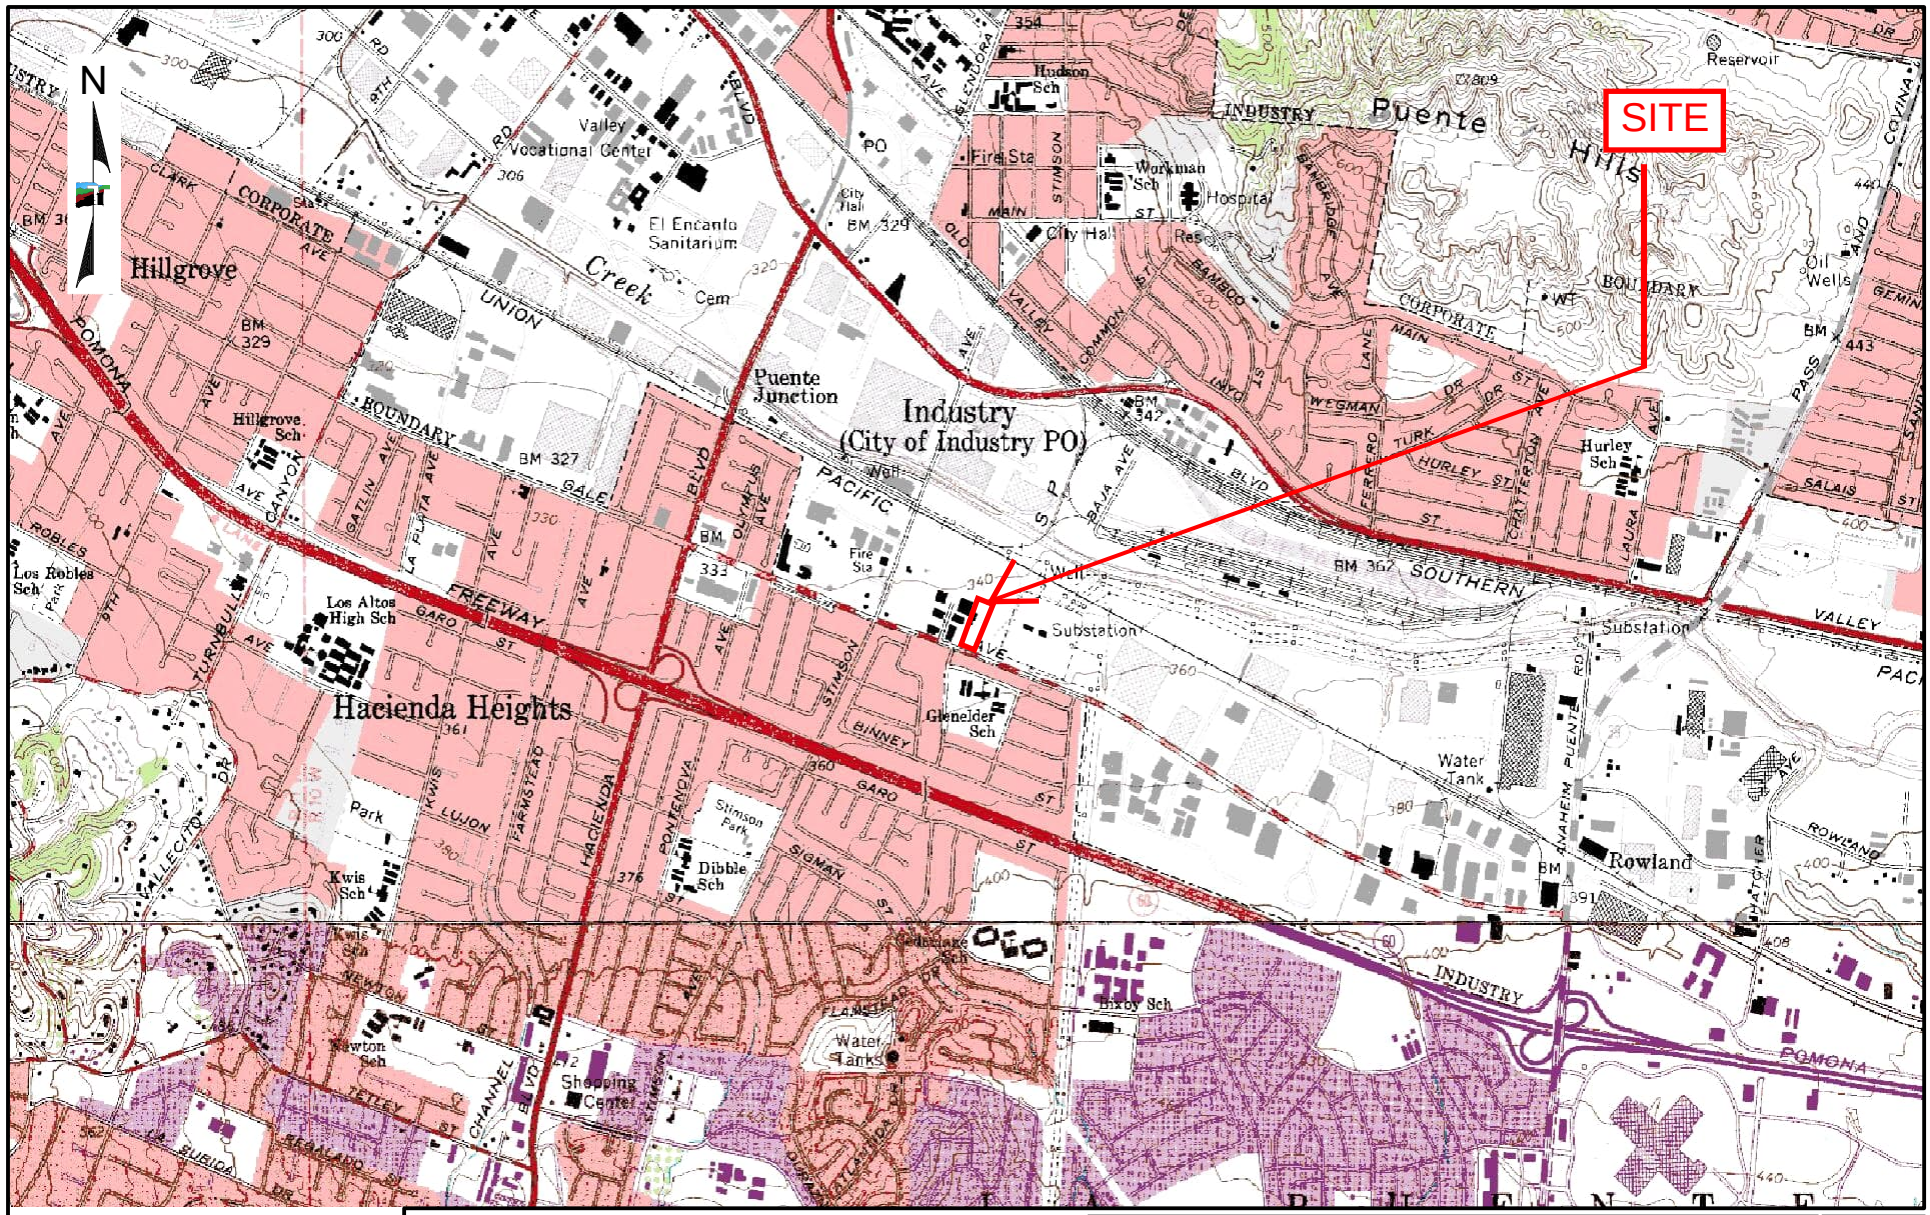
- The soils encountered consisted primarily of silt with trace sand to the maximum depth sampled of 20 feet bgs.
- Observed soils indicated no staining or odor, and PID readings were not measured above 1.0 ppmv.
- **TPH-GRO** and **TPH-DRO** was not detected in the soil samples analyzed. **TPH-MORO** was detected above laboratory reporting limits in one soil sample, with concentrations below the residential ESLs and commercial ESLs.
- **VOCs** were not detected above laboratory RLs in the soil samples analyzed.
- Metals are within the range of naturally occurring "background" concentrations, and are below residential, commercial, and construction worker screening levels except for **Arsenic** which was detected in one sample above the ESLs, but within the DTSC established upper-bound arsenic concentration of *12 mg/Kg* for Southern California. Using this regional background concentration, the detected arsenic concentration is within the naturally occurring "background" concentrations.
- No IDW was generated during drilling operations.

Soil Gas

- **1,3-Butadiene**, **Benzene**, **Ethylbenzene**, **PCE**, and **TCE** were detected at concentrations above their respective ESLs for residential and/or commercial land use in soil gas samples collected.

Based on the field observations and laboratory data, significantly impacted soils and soil gas were not identified in the areas and depths investigated.

The concentrations of **1,3-Butadiene**, **Benzene**, **Ethylbenzene**, **PCE**, and **TCE** above residential and/or commercial ESLs were detected in soil gas samples collected from soil gas probes located on the northern, central and southeastern portions of the site. Based on the absence of VOCs and petroleum hydrocarbons in the on-site shallow soil, and the documented groundwater plume associated with San Gabriel Valley (Area 4) in the vicinity of the site, it appears likely that the detected VOCs in soil gas may be associated with impacted groundwater from off-site regional sources. Additionally, it should be noted that the concentrations of VOCs in soil gas are generally increasing with depth, which further supports a likely groundwater source.



6.0 RECOMMENDATIONS

Based on the data, additional investigation does not appear warranted at this time. Terracon understands AYPA Power Development LLC. plan to develop the property as a Battery Energy Storage System (BESS) substation and no occupied buildings will be constructed on-site.

			15			100	0.0
		Probe tip set at 20 feet bgs in #3 sand	20			100	0.0
20.5	***Boring Terminated at 20.5 Feet***						

The stratification lines represent the approximate transition between differing soil types and/or rock types; in-situ these transitions may be gradual or may occur at different depths than shown.

Advancement Method:
Direct Push Technology

Abandonment Method:
Boring backfilled with bentonite chips upon completion.

See Appendices for description of field procedures.
See Appendices for description of laboratory procedures and additional data (if any).
See Appendices for explanation of symbols and abbreviations.

Notes:
Borings converted to temporary soil gas probes at 5 and 20 feet bgs

WATER LEVEL OBSERVATIONS
Groundwater not encountered

Notes:

Initial summa canister vacuum should be -28 to -30 inches of Hg. Do not use canister if initial vacuum is -27 inches of Hg or less.
in Hg = inches of mercury
inWC = inches of water column
If over 10in Hg not a good sample
Leak check = approximately 7.35 in Hg (or 100inWC) for 1 minute
0.40 SCFH = 188.78 mL/min

Purge Volumes (PV)	1PV	3PV	7PV
6" Subslab	18 mL	55mL	129 mL
5' Soil Gas	264 mL	791 mL	1845 mL
10' Soil Gas	288 mL	863 mL	2015 mL
20' Soil Gas	336 mL	1009 mL	2353 mL

*Purge volume calculated include tubing with sand pack (assuming 30% porosity)

*Standard purge time = 3PV / flow rate

Notes and Definitions

QM-4X	The spike recovery was outside of QC acceptance limits for the MS and/or MSD due to analyte concentration at 4 times or greater the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
QM-07	The spike recovery and/or RPD was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
D-06	The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

O-01	This compound is a common laboratory contaminant.
J	Detected but below the Standard Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
E	The concentration indicated for this analyte is above the calibration range of the instrument. This value should be considered as an estimated concentration.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the Method Detection Limit (MDL)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

B San Gabriel Valley Regional Groundwater Plume Maps

Acronym List

AST	Aboveground storage tank
BER	Business Environmental Risk
BESS	Battery Energy Storage System
BMPs	Best management practices
CAM-17 Metals	California Administrative Manual metals
COCs	Contaminants of concern
EPA	Environmental Protection Agency
ESA	Environmental Site Assessment
GC	General Contractor
HAZWOPER	Hazardous Waste Operators and Emergency Response
HASP	Health and Safety Plan
NPDES	National Pollutants Discharge Elimination Permit System
OCPs	Organochlorine pesticides
OSHA	Occupational Safety and Health Administration
PCBs	Polychlorinated Biphenyls
PCE	Perchloroethylene
PPE	Personal protective equipment
PRP	Potential responsible party
pVEC	Potential vapor encroachment condition
REC	Recognized environmental condition
SCAQMD	South Coast Air Quality Management District
SGMP	Soil and Groundwater Management Plan
STLC	Soluble Threshold Limit Concentration
SWPPP	Stormwater Pollution Prevention Plan
TBD	To be determined
TCE	Trichloroethylene
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total petroleum hydrocarbons
UST	Underground storage tank
VEC	Vapor encroachment conditions
VOCs	Volatile organic compounds
WET	Waste Extraction Test

Soil and Groundwater Management Plan (SGMP) Reference Guide

Site Description	
Project Name:	Marici Project LLC
Project Location:	16207,16233, and 16253 Gale Avenue City of Industry, California 91475
Owner Contacts	
Owner:	Marici Project LLC
Primary Contact:	Alex Evers, Operations Manager Mobile: (626) 437-3346 Email: AEvers@aypa.com
Alternate Contact:	Nate Moore, Vice President of Operations and Maintenance Mobile: (775) 545-2078 Email: AEvers@aypa.com
Contractor Contacts	
General Contractor (GC)	To be determined
Environmental Professional (EP)	To be determined
California Certified Laboratory	To be determined
Relevant Permits/Agency Notification Requirements	
Confined Space Entry Permit	Required if qualified/trained personnel will be entering an excavation deeper than four feet, or if entering a structure with limited ingress/egress and the potential for hazardous atmosphere.
South Coast Air Quality Management District (SCAQMD)	The contractor to confirm that no permit and no notification is required. Best management practices (BMPs) need to be implemented for effective dust control management (confining generated dust to the boundaries of the Property). Any impacted or potentially impacted soils should be covered and/or containerized and handled as indicated herein.
County of Los Angeles Public Health – Environmental Health	Permits are required for soil borings deeper than 10 feet or that extend into groundwater.
State Water Resources Control Board (Water Board)	Stormwater Pollution Prevention Plan (SWPPP) and Construction Stormwater General Permit Order 2022-0057-DWQ coverage are required for construction activities; clearing, demolition, grading, excavation, and other land disturbance activities.

Potential Disposal/Recycling Facilities	
Non-Hazardous Soil	Soil Safe, Adelanto, CA
Hazardous Soil	CWM Kettleman Hills Landfill, Kettleman City, CA
Non-RCRA Hazardous Soil and Groundwater	TBD based on confirmation of compliance status to accept waste at the time of disposal. Potential facilities include: • World Oil Recycling, Compton, CA • Chiquita Canyon Landfill, Castaic, CA • Simi Valley Landfill and Recycling Center, Simi Valley, CA • Azusa Land Reclamation (owned by Waste Management, Inc.), Azusa, CA • Clean Harbors Buttonwillow Landfill Facility, Buttonwillow, CA
Potential Waste Transportation	
Registered Waste Hauler	Belshire Environmental SVCS, Inc.

1.0 Introduction

TRC has prepared this Revised Soil and Groundwater Management Plan (SGMP) to provide background information on environmental site conditions and best management practices (BMPs) for use in the event impacted soil or excavation water is encountered during construction of the Marici Project LLC. The project consists of demolition of existing site features and development of a Battery Energy Storage System (BESS). The project will be developed on parcels comprising 16207, 16233, and 16253 Gale Avenue in the City of Industry, California (Site). A Vicinity Map showing the Site location, and a Site Diagram showing an aerial photograph with the existing site features are included as **Exhibits 1 and 2** in **Appendix A**, respectively.

2.0 Site Description

Site Name	Marici Project LLC
Site Location/Address	16207,16233, and 16253 Gale Avenue City of Industry, California 91475 Los Angeles County Assessor Identification Numbers: 8242-016-033, 8242-016-034, 8242-016-036, 8242-016-044, and 8242-016-061
Site Description	The Site occupies approximately 9.2 acres that is primarily occupied by building improvements, asphalt-paved parking areas and driveways, concrete-paved loading docks, landscaping, and utilities. On-site operations include metal fabricating, food product warehousing, distribution, electronics, transportation services, and administrative business activities (Terracon, 2024, 2025a, 2025b).

Refer to **Appendix A** which includes **Exhibit 1** Vicinity Map showing the Site location and **Exhibit 2** Site Diagram showing an aerial photograph with existing developed conditions.

3.0 Background

The background information regarding the Site is primarily sourced from the five (5) previous Phase I Environmental Site Assessments [ESAs]) and two limited site investigations listed in the References. The Project addresses identified in this SGMP are those documented for the parcels on tax assessor records.

Current and historic land uses at the Site have included agricultural, industrial, and commercial activities, as follows:

- As early as 1894, the area of the Site and surrounding properties consisted of undeveloped and/or agricultural land through approximately the mid-1960s.
- By 1970, the eastern portion of the Site (16253 Gale Avenue) appeared as a Christmas tree farm with small structures/sheds in the east-central portion of the Site.
- By 1976, in the western portion of the Site (16233 Gale Avenue), the existing industrial building used for metal fabrication appeared to be developed.
- In the western portion of the Site (16207 Gale Avenue):

  - From 1970-2009, a stainless-steel commercial appliance manufacturer operated at the Site.
  - From 2009-2022, an auto and tent parts warehouse facility operated at the Site.
  - From 2009-2020, a computer numeric control (CNC) machine shop operated at the Site.
- By 2000, the eastern portion of the Site was developed with the existing multi-tenant logistical warehousing and fulfillment facility.
- Current operations include administrative business activities, warehousing, distribution, electronics, metal fabricating, and transportation services.

Immediately adjacent to the Site, land uses have included railroad, utility, and residential, as follows:

- By 1927, Union Pacific Railroad appeared developed north of the Site.
- By 1964:
  - The Southern California Edison Walnut Substation appeared developed east of the Site.
  - Residential neighborhoods appeared developed south of the Site.
- Land uses at the adjoining properties have remained consistent to the present.

Overall, based on the Phase I ESAs (Terracon, 2025a and 2025b) performed for the properties at the Site, the following conclusions regarding environmental conditions of concern have been identified:

- The Site is located within the San Gabriel Valley, Puente Valley Operable Unit (Area 4) Superfund project, which includes regional groundwater that is impacted by halogenated solvents including trichloroethylene (TCE) and perchloroethylene (PCE) above applicable regulatory screening levels. Based on the regional plume maps in November 2020 showing PCE concentrations in shallow groundwater, it appears the plume is mostly located north/northeast of the Site and extends underneath the Site in the vicinity of Gale Avenue (see Figure 14 prepared by Tetra Tech in **Appendix B**). Based on review of the Environmental Protection Agency (EPA) and Regional Water Board records, the Site was not reported as a contributor to the plume (Terracon, 2024) and the Site was not listed as a potential responsible party (PRP; Partner, 2017). Relative to the Site, this Superfund project represents a recognized environmental condition (REC) and potential vapor encroachment condition (pVEC) due to the anticipated shallow depth of groundwater in the Site vicinity (Terracon, 2024, 2025a, 2025b).

- The off-site adjoining SCE Walnut Substation located east of the Site was identified as a potential source for halogenated solvent impacts to shallow groundwater beneath the Site based on the generated waste streams identified (including halogenated solvents), the close proximity to the Site, and the shallow depth to groundwater (approximately 19 feet below grade [fbg]). The off-site SCE Walnut Substation represents a REC to the Site (Terracon, 2024).

- For the 16207 Gale Avenue property, the former stainless-steel commercial appliance manufacturer represents a REC to the Site based on the longevity of industrial operations (approximately 39 years), lack of information concerning waste streams, and

the likely use of petroleum and solvents/chemicals as part of the historical operations (Terracon, 2025a).

- For the 16233 Gale Avenue property, the Metal Cutting Service facility represents a REC to the Site based on longevity of business operations (approximately 49 years), the likely use of petroleum and solvents/chemicals as part of the current and historical operations at the Site, and the potential release of hazardous substances (Terracon, 2025b).

- Polychlorinated biphenyls (PCBs) were identified offsite (SCE Walnut Substation). The Phase I ESAs concluded they do not represent a REC for the Site.

- Organochlorine pesticides (OCPs) from historic agricultural land use are not identified as a REC for the Site.

Limited site investigations (LSIs) were performed at the properties in February 2025, and were reported in Terracon, 2025c and 2025d listed in the References. The objective of the LSIs were to assess the presence of chemicals commonly associated with the RECs identified in the Phase I ESAs. The laboratory results of soil and soil vapor samples collected and analyzed for the LSIs are summarized as follows:

- Soil – TPH and VOCs: Volatile organic compounds (VOCs), total petroleum hydrocarbons gasoline range organics, (TPH-GRO), TPH diesel range organics (TPH-DRO) were not detected above laboratory reporting limits (RLs). Motor oil range organics (TPH-MORO) were detected above the RL for one (1) sample, but it was below its residential and commercials environmental screening levels (ESLs). All other samples were below the RLs for each constituent analyzed.

- Soil – Metals: Metals were not detected above the laboratory RLs with the exception of arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. The concentrations of the metals listed above are within the range of naturally occurring “background” concentrations, and were below residential, commercial, and construction worker ESLs; except two (2) soil sample results for arsenic above ESLs but below the Department of Toxic Substances Control (DTSC) established regional “background” concentrations for Southern California.

- Soil Gas – TPH and VOCs: Concentrations of 1,3-butadiene, benzene, ethylbenzene, tetrachloroethene (PCE), trichloroethene (TCE), and 1,1,2,2-tetrachloroethane (TCA) were above either residential or commercial ESLs or both. It is noted that concentrations of VOCs in soil gas are generally increasing with depth, which supports that the regional VOC groundwater plume may be a likely source.

4.0 Excavated Soil Characteristics

While no impacted soils have been identified onsite, during excavation and grading, there is a potential to encounter unknown impacted soils, for example, when buildings, foundations or paving are removed or underlying soils are excavated. Based on the identified RECs, potential constituents of concern (COCs) could include total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs). If excavated, impacted soils may result in the generation of waste that would require management and additional precautions during construction.

The groundwater in the Site vicinity is anticipated to be encountered at depths ranging from approximately 21 to 26 fbg (Terracon Geotechnical Report, December 2024). Based on the maximum depth of the proposed excavation activities (up to 10 fbg), groundwater is not anticipated to be encountered at the Project Site during routine earthwork. However, geotechnical exploration soil borings and/or deep foundations for the interconnection support poles have the potential to encounter groundwater, which is further described in **Section 9.0**.

1. **RCRA Hazardous Waste** – excavated soil with representative chemical concentrations exceeding Federal criteria when analyzed by Toxicity Characteristic Leaching Procedure (TCLP). Based on the available data, soil excavated from the Project Site is not anticipated to fall under this category.

2. **Non-RCRA [California] Hazardous Waste** – excavated soil with representative chemical concentrations exceeding State criteria when analyzed by Waste Extraction Test (WET) methods, Soluble Threshold Limit Concentration (STLC), but not exceeding Federal criteria. Based on the available data, soil excavated from the Project Site is not anticipated to fall under this category.

3. **Non-hazardous Waste** – excavated soil with representative chemical concentrations less than State and Federal criteria. Previously undocumented, localized area(s) of soil excavated from the Project Site may fall under this category.

4. **Non-impacted Soil** – soil does not have chemical impacts that would require special handling or off-site disposal. It is anticipated that the vast majority of the soil excavated from the Project Site will fall under this category.

5.0 Notifications and Pre-Excavation Activities

5.1 General Notifications

The GC is responsible for all necessary permits and notifications to regulatory and permitting agencies associated with the project work. BMPs should be implemented by the GC to ensure compliance with the approved SWPPP and dust control plan.

5.2 Notifications for Impacted Soil

The Owner will require the General Contractor (GC) and its subcontractors to instruct and train workers to be cognizant of the potential for encountering soil contaminated by past activities and to implement measures consistent with this plan.

The Owner shall be immediately notified of any discovery of potentially impacted soil or unanticipated underground feature such as an underground storage tank (UST), septic pit, hydraulic lift component, clarifier, or other unknown feature which is suspected to potentially contain or have in the past contained hazardous substances.

In the event of any indication of impacted soil is observed (i.e., odors, staining, debris, etc.) during an excavation or other work that exposes soil, the Foreman shall immediately notify the

Owner and the Owner shall promptly obtain recommendations from a qualified environmental professional regarding any additional characterization/sampling and remedial activities that should be conducted.

The immediate notification to the Owner for reporting discoveries shall be to:

- **Primary Contact: Alex Evers, Operations Manager**
  Mobile: (626) 437-3346
  E-mail: AEvers@aypa.com

- Alternate Contact: Nate Moore, Vice President of Operations and Maintenance
  Mobile: (775) 545-2078
  E-mail: NMoore@aypa.com

5.3 Worker Education and Safety

This Revised SGMP provides information that will help to support compliance with employer obligations such as employee right-to-know, worker safety, and other regulatory programs while providing general guidelines for reducing the potential for exposure if impacted soils are encountered. However, each employer remains responsible for the health and safety of its own workers. This Revised SGMP is not intended for direct, unmodified use by employers to protect workers. Rather, it intends to provide general considerations and procedures for modification and incorporation by employers into their existing worker safety programs. The GC and environmental consultant must inform and educate their respective workers and subcontractors to be alert for new or undiscovered conditions that could potentially pose risk.

The GC, environmental consultant, and their subcontractors are required to develop and implement independent Health and Safety Plans (HASPs) during all phases of work. The HASP should be prepared by a qualified person experienced in the health and safety risks associated with the identified COCs in accordance with the Federal Occupational Safety and Health Administration (OSHA) Hazardous Waste Operators and Emergency Response (HAZWOPER) standard (29 CFR 1910.120) and Cal-OSHA standard (8 CCR 5192). The HASP should specify administrative and engineering controls and require applicable personal protective equipment (PPE) for worker safety during each stage of the Project.

6.0 Potential Impacted Soils

Based on the findings from the previous Phase I ESAs and the LSIs performed in 2025, which are summarized in Section 3.0 above, construction workers have the potential to be exposed to soil (TPH-MORO) and/or soil gas (VOCs including PCE and TCE) with concentrations that could represent a health hazard (See **Exhibit 2**). From the LSI results, metal concentrations in soil (particularly arsenic) are below DTSC accepted regional background levels.

The environmental consultant shall be onsite when substantive grading or excavations are occurring in soils not previously disturbed by project construction. The GC and environmental consultant shall implement procedures and practices to ensure that their respective workers are trained to be continually observant for potential impacted soils. The Owner, or the GC and

environmental consultant at the Owner's direction, shall provide for active, periodic field oversight including:

- Screening exposed and excavated soils:
    - Using visual indicators and instrumentation (e.g., calibrated photoionization detector) to identify potentially TPH- and VOC-impacted soils.
    - Based on visual indicators or instrumentation, potential collection of select soil samples for laboratory analysis for contaminants of concern (COCs) including TPH, VOCs, and any additional profile testing that may be required by waste disposal facilities, using EPA approved methods. At a minimum, this testing would include profiling of removed soil waste that will be transported for off-site disposal.
- Excavation, separation, and documentation of potentially impacted soils.
- If appropriate, collection of select samples for laboratory analysis (as indicated above) from:
    - Soils remaining where impacted soils have been removed.
    - Impacted soils designated for reuse, additional sampling, and/or for off-site disposal.
- Coordination and facilitation of waste profiling, transportation, and disposal.

7.0 Potential Exposure Pathways and Receptors

Exposure pathways are identified as:

- Inhalation of dust or vapors that could be generated from impacted soil.
- Dermal contact with impacted soil during excavation activities.
- Dermal contact or ingestion of groundwater.

The GC, environmental consultant, and Subcontractor HASPs and BMPs should include hazard assessment and mitigation measures to eliminate or minimize potential exposure pathways.

8.0 Soil Management

8.1 Soil Excavation Parameters

Nearly all of the project site will be graded, and most excavations will be less than 10 feet deep. Two electric tie-line support poles will require deep excavations or borings.

8.2 Waste Minimization/management

If impacted soil is encountered, it should be removed and segregated in a manner to minimize over-excavation or mixing with clean soil. Impacted soils should be removed from the Site frequently to minimize the potential for contact between stormwater and any impacted soils identified during excavation. Excavation in areas where impacted soil is encountered should be protected from stormwater run-on by clean soil berms or other diversionary features to direct

water away from any exposed impacted soils. Other BMP measures such as covering impacted soils with plastic shall be implemented to prevent or minimize stormwater contact with impacted soils.

8.3 Changed Conditions and Soil Stockpiling

The GC and subcontractors should be aware of the regulatory implications of improper management or disposal of contaminated soils. If changed conditions are encountered (i.e., petroleum hydrocarbons, USTs, or obviously impacted soils), the excavated impacted soil shall be stockpiled separately on plastic sheeting under the direction of the environmental consultant, covered with plastic sheeting, and secured with fiber rolls or equivalent until they can be properly evaluated. See **Section 5.2** for notifications. Workers in physical contact with obviously impacted environmental media should have OSHA HAZWOPER training consistent with 29 CFR 1910.120.

If chemical odors, stained or saturated soils, a sheen on water collected in excavations, detected concentrations of COCs from laboratory analysis of select soil samples, or other evidence of potential chemical contamination is encountered during excavation activities, work in the area of the discovery shall cease immediately and the Owner shall be notified. See Section 5.2 for notifications.

8.4 Waste Characterization and Disposal

If impacted soils are identified, the impacted soil shall be characterized as needed to determine which of the waste categories in Section 4.0 it fits in. If off-site disposal is required characterization will also be required by the receiving facility. Based on historical knowledge of the Site and vicinity, if impacted soils are encountered, typical waste profiling parameters, may include TPH carbon chain by EPA Method 8015M and VOCs by EPA Method 8260B. If impacted soil is excavated, proper classification is the responsibility of the Generator, which will be the Owner unless otherwise dictated by contract or state law. All impacted soil characterization and results as well as manifesting shall be coordinated with the Owner.

Only an authorized transporter can transport soils offsite. Transport and shipping documentation shall be coordinated with the Owner. Receiving facilities must be licensed to receive the types and concentrations of COCs in the soil shipment. Some licensed disposal/recycling facilities and waste transporters are listed in the **SGMP Reference Guide**. The listed facilities are not intended to be limiting.

9.0 Groundwater and Stormwater Management

If either groundwater or stormwater that has contacted impacted soils is handled during construction, management measures in this plan must be adhered to. The groundwater in the Site vicinity is anticipated to be at depths of approximately 21 to 26 fbg. Groundwater is not expected to be encountered during construction except potentially for construction of the deep foundations for the electric tie-line support poles, and potentially in borings if additional geotechnical drilling is conducted. If stormwater collects in any excavation during construction, it should be visually inspected for evidence of sheen or other indication of COC presence such as visually impacted soil in the excavation wall. If groundwater or storm water that has come in

contact with potentially impacted soils is to be removed from an excavation, the water shall be managed as potentially contaminated and evaluated through chemical analysis prior to discharge and/or off-site disposal. Samples shall be collected by a qualified person and characterization shall be coordinated with the Owner.

Produced and/or captured groundwater or stormwater that has contacted impacted soils shall be containerized in suitable portable aboveground storage tanks (ASTs) compatible with the potential COCs and properly secured to prevent unsafe exposure, contact with stormwater, or discharge to the surface, storm drains, or waterways. Secondary containment of the containerized water shall be established for volumes greater than 100 gallons and shall have a capacity of 110 percent (%) of the total volume of the containers, regardless of actual volume stored in the containers. Additional BMPs such as regular inspection of the containers and secondary containment and proper labeling shall be maintained.

9.1 Permits

Discharge of untested and/or untreated groundwater or potentially impacted stormwater to the ground surface, storm drain, or sanitary sewer system is prohibited. It is the responsibility of the GC, and/or its subcontractors to obtain the necessary permit and equipment to conduct any dewatering and discharging activities that might be needed and to ensure that required characterization (e.g., laboratory analysis of COCs using EPA-approved methods) of such water occurs under the direction of the environmental consultant. Impacted water must be managed in accordance with applicable waste regulations. Impacted water may be shipped off-site by a licensed hauler to a permitted treatment facility or treated on-site and discharged under a valid permit. Water generated may be temporarily stored on-site in ASTs, as described above, pending necessary permitting, testing, and/or treatment. Some licensed disposal/recycling facilities and waste transporters are identified in the SGMP Reference Guide. The listed options are not intended to be limiting.

Project construction will need to occur under the State Water Resources Control Board Construction General Permit Order 2022-0057-DWQ, adopted September 8, 2022, effective September 1, 2023.

9.2 Sampling and Testing Groundwater or Stormwater

If either groundwater or stormwater that has contacted impacted soils must be handled, the GC will ensure that sampling and testing occur in accordance with applicable regulations as directed by the environmental consultant. All sampling shall be conducted by qualified personnel. Samples shall be collected in laboratory-provided pre-cleaned, EPA-approved sample containers, transported to an accredited laboratory in a cooler with ice, and shipped with chain-of-custody documentation. Based on the known potential chemicals of concern, if groundwater is pumped, samples shall be collected and analyzed pursuant to regulatory permit requirements, and may include TPH by EPA Method 8015M and VOCs by EPA Method 8260B. Additional sampling and analysis may be required for waste characterization or discharge to local sanitary sewer system and/or storm drain according to applicable permit requirements, such as general chemistry, pH, and temperature.

10.0 Additional Project Controls

The following additional control measures, or measures with similar of greater effectiveness, shall be implemented to limit the potential for worker or public exposure to impacted soils, if present.

10.1 Dust Control Measures

The GC will be responsible for controlling dust in accordance with SCAQMD requirements. A Dust Control Permit and a Dust Mitigation Plan may be required. Supplemental permits may also be needed for activities such as (but not limited to) stockpiling, backfilling, or crushing, etc. A complete list of the necessary supplemental permits typically is available on the SCAQMD web as follows:

http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies/fugitive-dust.

The GC will be responsible for the preparation of and adherence to the Dust Mitigation Plan, as well as adhering to other pertinent requirements referenced.

10.2 Stormwater Quality Controls

Project construction will require coverage under State Water Resources Control Board Construction General Permit Order 2022-0057-DWQ for storm water discharges from construction sites. The Owner will hold the General Permit and will require the GC to comply with the permit and with the SWPPP required by the permit. The SWPPP will be prepared by a Qualified SWPPP Developer and will include BMPs to prevent stormwater contact with potential contaminants site-wide. The SWPPP will be complementary to this Revised SGMP, and the GC and subcontractor work and environmental consultant directives will be required to follow applicable BMPs from both if impacted soil or groundwater is managed.

11.0 Documentation

Upon completion of Site excavation activities and receipt of any necessary laboratory analytical results and waste manifest documentation, the GC and/or environmental consultant shall prepare a report that will include:

- Field Logs or Activities Summaries and photo-documentation related to any encounters of impacted soil or water.
- Tabulated summary of samples taken.
- Laboratory results for testing of soil and groundwater samples, and characterization of wastes, if any.
- Site map indicating sample locations and limits of contamination encountered, if any.
- Waste profile forms, if any.
- Waste manifests for soil and water transported off-site for disposal and/or recycling, if any.

12.0 Limitations

This Revised SGMP has been developed to inform the GC, environmental consultant, and subcontractors of the potential for encountering contaminated soil or water during excavation activities at the Site. If encountered, impacted soil or water could contain COCs at concentrations that could present a health hazard to construction personnel via dermal contact, inhalation of dust or vapors, or accidental ingestion. The measures herein are intended to inform the GC, environmental consultant, and subcontractors of the potential for impacted soil or groundwater to be encountered and to provide general guidance and project-specific requirements for management of impacted soil, stormwater that has contacted impacted soil, or groundwater. It is not intended to fulfill any GC, environmental consultant, or subcontractor obligation for worker health and safety, waste management, or environmental protection. The GC, environmental consultant, and its subcontractors engaged in activities at the project are responsible for conducting Site activities in accordance with all applicable federal, state, and local environmental and safety regulations. Additionally, since there are no known impacted soils on the Project site and this plan is primarily oriented toward the discovery of currently unknown conditions, this plan should be updated during construction in the event any such need is identified.

Hazardous Materials and Safety Memorandum

MEMORANDUM

To: Geoff Forner, Aypa Power Development LLC

From: Joe Stenger and Chris Andrews, TRC

Date: February 5, 2025

Re: Hazardous Materials Safety Requirements, Marici Project, City of Industry, CA

TRC Project No. 604109

The Marici Project is a planned 400-megawatt battery energy storage system (BESS) to be constructed on an approximately six-acre parcel in City of Industry, California. The project will utilize lithium-ion battery energy storage technology with batteries in purpose-built outdoor containers to store energy from the grid and discharge it back into the grid when needed. The battery energy storage operation does not generate electricity and does not generate any emissions to air, land, or water. Operation of lithium-Ion battery energy storage facilities require few hazardous materials. Hazardous materials expected to be needed include mineral oil, coolant and refrigerant. In addition, the backup generator will have a fuel tank and lubricating oil. Lithium-ion batteries also contain hazardous materials and spent or damaged batteries can fall under hazardous or universal waste management regulations.

This memorandum has been prepared to identify applicable regulations and consensus standards applicable to BESSs for use and storage of hazardous materials, fire prevention and protection, safety, and emergency response preparedness. These requirements will need to be integrated in Project planning and execution to comply with existing regulations and standards. Key regulatory requirements include, but are not limited to, the following as further described below:

- Federal and State requirements for Hazardous Chemical Inventory Reporting and Emergency Response Planning;
- Federal and State requirements for preventing spills;
- Federal and State requirements for employers to protect worker health and safety;
- Federal and State requirements for management of hazardous waste;
- National Fire Protection Association (NFPA) 855 standards for Battery Energy Storage Systems;
- State requirements for BESS Emergency Planning;
- State and local fire authority requirements; and
- Water quality protection requirements.

Hazardous Chemical Inventory Reporting and Emergency Response Planning

Section 311 in the Federal Emergency Planning and Community Right-to-Know Act (EPCRA) requires facilities that have hazardous chemicals to report the presence of such chemicals onsite to the State and local emergency planning committees (LEPC) if the chemicals are present above threshold quantities. In California, these requirements and additional hazardous material reporting requirements are implemented through California Code of Regulations (CCR) Title 19 Division 5, Chapter 1 (Section 5030.1 et seq). Under these regulations, the project will be required to maintain an inventory of all hazardous materials onsite in a quantity equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet (STP) for gas or exceeding any federal threshold planning quantity in 40 CFR Part 355. The inventory will need to be submitted to Certified

Unified Program Agency and the local fire authority via online filing and must be updated annually and within 30 days of changes. The hazardous materials inventory must identify all hazardous materials onsite above threshold quantities and provide common and chemical name, Chemical Abstract Service Number, map location, quantity stored, type of container, largest container quantity, storage temperature and pressure information and hazardous properties. The inventory is designed to provide emergency response agencies with the information needed to be prepared for prompt and appropriate response to a potential hazardous materials incident. The submittal also must include emergency response plans and procedures including immediate notification of local emergency response personnel and procedures for mitigation, prevention, and abatement of hazards to persons, property or the environment. Title 19 Division 5 Chapter 1 regulations also require a training program including initial and annual refresher training for safe handling of hazardous materials, procedures for coordination with local emergency response agencies, use of onsite emergency response equipment and supplies. Such training helps to minimize the potential for hazardous materials incidents and to ensure prompt and appropriate response in the event of an incident.

Oil Spill Prevention and Preparedness

Oil-filled transformers will be subject to Code of Federal Regulations Title 40 Part 112 and California Health and Safety Code Chapter 6.67 requirements for development and implementation of a Spill Prevention Control and Countermeasures Plan (SPCC) including secondary containment for aboveground bulk oil storage containers, routine inspections for oil containment integrity and ensuring collected stormwater is oil-free before it is released, and contingency planning for prompt and appropriate response to a potential release. SPCC requirements would also apply to a back-up generator fuel tank and if a temporary bulk fuel tank is provided onsite during construction. The requirements in these regulations are designed to minimize the potential for an oil spill from equipment to impact waters.

Federal and State Occupational Safety and Health

Federal and State OSHA regulations require that all employees be informed and trained on hazardous materials in their work area at the time of their assignments. These are comprehensive regulations designed to protect worker health and safety and by doing so helping to minimize the potential for a hazardous material incident and ensure training for prompt and proper response to a potential hazardous materials incident. CCR 5194 requires manufacturers or importers to classify the hazard of chemicals that they produce or import and requires all employers to provide information to employees about the hazards of chemicals to which they may be exposed. A written hazard communication program must be maintained at the workplace including a list of hazardous chemicals, a Safety Data Sheet for each hazardous chemicals, comprehensive labeling and communication procedures for hazardous chemicals, training methods, and precautionary procedures to protect employees during normal operations and in the event of an emergency. Comprehensive training and precautionary procedures required by these regulations help to minimize the chance of a hazardous chemical spill or other human error hazardous chemical event. CalOSHA General Industry Safety Orders (Section 3220 *et seq.*) includes standard specifications for an Emergency Action Plan that employers must develop to keep employees safe from fire and other emergencies. Required components include redundant alarm systems, emergency reporting, procedures for emergency evacuation and continued operation of critical elements, emergency contacts, and training.

Hazardous Waste Requirements

The Project may generate small quantities of hazardous waste subject to regulation under CCR Title 22, Division 4.5 and would be expected to meet the criteria for Small Quantity Generator. State regulations in CCR Title 22 Division 4.5 require facilities generating hazardous waste to have preparedness and prevention measures in place for emergency response minimizing the potential for a release of hazardous

waste and to support prompt and appropriate response in the event of an incident including internal communications or alarm systems, fire control, spill control and decontamination equipment, fire suppression water systems, and posted emergency information. Hazardous waste Generators are required to ensure that employees are trained and knowledgeable on emergency procedures and to attempt to make arrangement with local emergency responder appropriate for the wastes managed.

National Fire Protection Association (NFPA) 855 – Battery Energy Storage Systems

The 2023 revisions to NFPA 855 are designed specifically to mitigate risks of fire and explosion for battery energy storage systems. The NFPA 855 requirements are incorporated in the International Building Code (IBC) requirements applicable to the Project via California Building Code. The NFPA 855 also requires and outlines the requirements for the following:

- Permits
- Hazard Mitigation Analysis (HMA)
- Fire Risk Assessment (FRA).
- Emergency response plan (ERP)
- Inspection, testing and maintenance of fire protection systems.

Containers would be spaced in accordance with NFPA 855 requirements that are designed to minimize risk of a fire spreading to adjacent containers so that if a fire occurs, it can be isolated. NFPA 855 also would require comprehensive safety planning submittals to the local fire authority having jurisdiction including results of bench-scale fire and explosion testing by the manufacturer and hazard mitigation analysis for the specific type of battery used, and an Emergency Response Plan designed to ensure well-planned, prompt, safe, and appropriate response in the event of an emergency. These submittals would be made to the Fire Department after the specific equipment is selected and prior to issuance of building permits. NFPA 855 mandates initial and annual refresher emergency response training for facility staff. The Project should coordinate with the Fire Department during construction and operations to facilitate site-specific Fire Department staff training.

State Requirements for BESS Emergency Planning

California SB 38, passed in 2023, requires BESS facilities to develop Emergency Response and Emergency Action Plans that:

- Establish response procedures for an equipment malfunction or failure;
- Provide for the safety of surrounding residents, neighboring properties, emergency responders, and the environment through procedures established in consultation with local emergency management agencies; and
- Establish notification and communication procedures between the facility and local emergency management agencies.

The Los Angeles County Fire Department is the Certified Unified Program Agency (CUPA) in the City of Industry and has jurisdiction for permitting the battery energy storage under NFPA 855 and will require the information needed for consistency with SB 30 and other emergency planning requirements for BESS prior to operations.

State and Local Fire Authority Requirements

The project will be required to comply with State building and fire code requirements and Los Angeles County Fire Code. Los Angeles County Fire Code adopts the California Fire Code and International Fire Code by reference. These codes include comprehensive regulations regarding all conditions affecting the

safety of fire fighters and emergency responders during emergency operations and required fire hydrant systems, water supply, fire equipment access, combustible materials controls, flammable liquid storage controls, and other requirements for fire and explosion prevention (LACFC Title 32, Section 101.2). Los Angeles County Fire Code section 1207 contains safety requirements specifically for energy storage systems and requires that project proponents obtain both a construction permit and an operating permit for lithium-ion energy storage systems of 20 kWh or more. Additional BESS design standards are under development by Los Angeles County Fire Department and the fire department will be responsible for fire safety plan reviews and inspections and will enforce the fire code. The Fire Departments authority over permitting and enforcement authority for the Fire Code, SB 38, CCR Title 19, and NFPA 855 will ensure integrated emergency prevention and emergency response planning and preparation across each of these requirements and that such measures are satisfied prior to operations.

Water Quality Protection Requirements

The Clean Water Act is implemented in California through the Porter Cologne Water Quality Control Act and both State and federal regulations include requirements designed to ensure that hazardous materials do not pose a threat to water quality. During construction, the project will need to comply with the State General Permit for stormwater discharges from construction sites as described further below. During operations, the project will need to implement and maintain engineering and other best management practices required under the Los Angeles County Municipal Separate Storm Sewer System (MS4) permit as described further below.

Construction NPDES

Because construction will disturb more than one acre, the Project will be required to apply for and comply with the State General Permit for stormwater discharges from construction sites. For coverage under the permit, the Project will need to submit a Storm Water Pollution Prevention Plan (SWPPP) with best management practices to be implemented to prevent stormwater pollution. Construction best management practices include storage and use of hazardous materials under safeguards to prevent releases to soil or water. Precipitation or runoff contact with hazardous materials must be prevented through engineering and other best management practices. The Regional Water Quality Control Board has jurisdiction for review of SWPPPs and implemented BMPs and will acknowledge coverage under the State General Permit upon demonstration of an appropriate SWPPP and other permit registration documents.

Operations MS4 Compliance

Operations requirements for the project also include best management practices for prevention of stormwater pollution. These measures include proper waste management to prevent contact with runoff, and storage and handling hazardous materials following measures to prevent spills or other releases that could be contacted by precipitation or runoff.

1 Executive Summary

A plume study was conducted for the Marici BESS (battery energy storage system) site to determine toxicity and flammability hazards posed to nearby areas during possible battery failure scenarios. The study considers toxic species that can be released by Li-ion batteries during thermal failures. Accumulation of flammable battery vent gas outside a failing BESS enclosure is also considered. Computational fluid dynamics (CFD) models were utilized to simulate plumes resulting from theoretical battery failure scenarios. The modeled scenarios considered (1) a non-fire scenario in which battery vent gas is released, (2) a small fire scenario, and (3) a large fire scenario. Low and high wind conditions were evaluated based on nearby meteorological data.

Based on the modeled scenarios, toxic gas species concentrations 2 m (6.6 ft) from ground level and flammable gas accumulation surrounding the BESS enclosure were estimated using Fire Dynamics Simulator (FDS), which is a CFD software developed by the National Institute of Standards and Technology (NIST) for fire modeling. This software has also been extensively validated for gas dispersion. A summary of the findings of the study is as follows:

- The large fire, high wind condition was found to result in the highest battery plume concentrations 2 m (6.6 ft) above ground level for much of the modeled distance downwind of the enclosures. The modeled average carbon monoxide concentrations may cause serious health effects (exceed the AEGL-2 level) up to approximately 5.8 m (19 ft) from the unit in a large fire scenario with high winds. The 99th percentile wind speed of 15 mph was used to model the high wind scenarios for the Marici site. For first responders who may be operating within this region, guidance for appropriate personal protective equipment (PPE) can be found in relevant Emergency Response Protocol (ERP) documents.
- Modeled carbon monoxide levels may exceed the AEGL-2 limit (150 ppm) at 2 m (6.6 ft) above ground level beyond the masonry wall in high wind conditions in areas where the wall is less than 5.8 m (19 ft) from the BESS enclosures. Concentrations at the AEGL-2 level may cause serious health effects.
- The high-wind gas release scenarios (with no fire) resulted in the greatest modeled distances for the OSHA PEL (8-hour average) and EPA NAAQ (1-hr) levels of carbon monoxide. The worst-case distances were 42 ft and 50 ft, respectively.
- Modeled unit gas release scenarios with an active NFPA 69 ventilation system did not result in flammable regions of battery vent gas outside the enclosure. The ventilation system diluted the gas such that it remained below the lower flammability limit (LFL).
- Over 600 houses are located within a half-mile of the Marici site. The nearest residential property is 111 ft away from the BESS enclosure at the edge of the site. At these distances, CO levels are expected to be below the EPA NAAQ (1-hr) level of 35 ppm.
- Hydrogen fluoride (HF) levels were not evaluated as HF was not measured during the UL 9540A testing for this system. HF has been measured in laboratory-scale battery thermal runaway tests; however, the range of reported measurements is wide. Thus, hydrogen fluoride may be a risk, but the exact magnitude of this risk is unknown. Hydrogen fluoride is highly reactive with a range of materials including metals and various organic compounds. It is unclear whether substantial HF concentrations persist at a distance away from larger module, rack, and ESS scales. HF can also be emitted from the combustion of plastic components in the ESS, such as wiring insulation and module or rack enclosure casings. Although these plastics are commonly fire-retarded, fire-retardant plastics can be overwhelmed if the severity of the fire is sufficiently large. Similar fire-retardant plastics are commonly found in non-battery applications and may pose similar emission hazards during fire conditions.

- Other toxic organic gases, such as volatile organic compounds (VOCs) make up only trace amounts of the battery vent gas. VOC release quantities are too small to exceed hazardous levels at any distance from the unit.

Note that this Executive Summary does not contain all of Hazard Dynamics' technical evaluations, analyses, conclusions, and recommendations. Hence, the main body of this report is at all times the controlling document.

2 Introduction

This report describes the results of a plume dispersion study conducted for the Marici battery energy storage system (BESS), which is being built in City of Industry, California. The Marici site uses the Sungrow PowerTitan 2.0 for lithium-ion battery energy storage. The purpose of a plume study is to identify and quantify potential risks associated with toxic and flammable gases produced by a battery energy storage system (BESS) under abnormal conditions.

Where appropriate data is unavailable, reasonable engineering assumptions will be made. These assumptions will be drawn from the available body of technical literature. This analysis was conducted using a set of probable worst-case scenarios based upon available test data such as UL 9540A reports and includes up to a fully-involved fire in a single unit.

This report will first provide background on the toxicity hazards of lithium-ion battery systems. Next, it will review the details of the Marici site as well as the energy storage system itself. Finally, the report will evaluate possible toxic and flammable gas scenarios and their consequences.

This analysis relies on the following information:

- Plans for the Marici site [1]
- Specifications for the PowerTitan 2.0 system [2]
- UL 9540A Cell test report for cell model L173F314, CSA Group – Kunshan Branch report number 80184345 dated 11/17/2023 [3]
- UL 9540A Module test report for module model P1044AL-AHA, TUVRheinland (Shanghai) Co., Ltd. report number CN23P68X 001 dated 12/16/2023 [4]
- UL 9540A Unit test report for unit model applies to various R0417BL and R0835BL unit configurations, TUVRheinland (Shanghai) Co., Ltd. report number CN23JPBV 001 dated 12/16/2023 [5]
- CFD Heat Flux Modeling Report and NFPA 69 CFD Analysis for the Sungrow PowerTitan 2.0 [6] [7]

3 Background on Lithium-Ion ESS Toxicity Hazards

3.1 Toxicity Hazards

Toxicity hazards may exist alone or in combination with fire and explosion hazards. A significant amount of the gas released during thermal runaway is carbon monoxide (CO), which is toxic. Depending on the conditions, the combustion of battery gases may burn off some carbon monoxide or create additional carbon monoxide from partially reacted hydrocarbons. Smaller amounts of other toxic gases may also be released depending on the cell, whether the gases burn, and if water or other suppression agents are added. Experiments show that lithium-ion cells in thermal runaway may release hydrogen fluoride (HF), hydrogen chloride (HCl), hydrogen cyanide (HCN), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and other gases [8]. When the

gases burn, some of the toxic components may be consumed, although others may be generated. Smoke from many fires, including battery fires, is considered hazardous. Smoke typically includes asphyxiant gases, irritant toxic gases, and particulate matter. The introduction of water to a fire may change the composition of the smoke and can create water runoff, which may also contain hazardous substances. The use of other fire suppression agents may also alter the toxic release profile [9].

3.2 Toxic Gases of Interest

Abuse and failure of lithium-ion cells may result in gas production inside of the cells. When enough gas is produced, a safety vent may open, or the cell package may rupture. The gas mixture released is flammable and toxic and is primarily made up of carbon monoxide (CO), carbon dioxide (CO_2), hydrogen (H_2), and an assortment of hydrocarbons. If ignited, the combustion of these gases can lead to a fire or an explosion.

When a lithium-ion cell is exposed to high temperatures such as those due to fire exposure or propagating thermal runaway, it produces toxic compounds. Plastic contained in the battery system may contribute to these toxic combustion products. Such products may include carbon monoxide (CO), nitrogen oxides (NO_x), sulfur dioxide (SO_2), hydrogen chloride (HCl), and hydrogen fluoride (HF). The quantity of HF produced is related to the electrolyte solvent and the chemical reactions initiated. CO_2, H_2, and CH_4 are asphyxiant gases, or gases that can cause unconsciousness or death by suffocation because they displace oxygen in the air [8]. CO blocks the transport of oxygen by sticking to the hemoglobin in red blood cells. Poisoning by CO is often the major cause of death related to fire in which burns are not present [10]. Hydrogen cyanide (HCN) obstructs the function of mitochondria so that oxygen cannot be absorbed into the cells. Irritant gases include HF, HCl, SO_2, and NO_2. These gases have a toxic and irritating effect that can be significant even at very low concentrations. HCl is corrosive, highly irritating, and can cause severe injury to the respiratory tract if inhaled. SO_2 is extremely irritating and can form sulfurous acid when in contact with moisture. NO_2 and NO are especially irritating to the respiratory tract and lungs even at low concentrations. None of these irritants can be absorbed through the skin. HF, on the other hand, is not only severely irritating to the respiratory tract but can also penetrate skin and other tissues as the fluoride ion. When HF comes into contact with moisture, it can form hydrofluoric acid [11].

In evaluating harmful levels of toxic gases, it is helpful to reference levels known as IDLH (immediately dangerous to life or health) and AEGLs (acute exposure guideline levels). According to the Code of Federal Regulations, IDLH is defined as a concentration of any toxic, corrosive, or asphyxiant substance that poses an immediate threat to life, would cause irreversible or delayed adverse health effects, or would interfere with an individual's ability to escape from a dangerous atmosphere [11]. IDLH values were developed to address occupational exposures to chemicals and to help protect workers from acute or short-term exposures to high concentrations of some airborne chemicals that could result in undesirable health outcomes [12]. The AEGLs were developed by the EPA to define the health effects of a once-in-a-lifetime exposure to airborne chemicals. AEGLs are used by emergency responders when dealing with major chemical leaks, spills, or other exposures. AEGL concentrations are provided for different exposure times and health effect levels. Level 1 is discomfort or irritation, Level 2 is the onset of irreversible or serious health effects, and Level 3 describes life-threatening health effects [13]. Toxic gases related to battery energy storage systems along with their IDLH, AEGL-2, and AEGL-1 concentrations are shown in Table 1. The AEGL values presented in the table are based on an exposure time of 30 minutes, which is characteristic of how long someone evacuating might be exposed to a substance.

Table 1: Toxic chemicals that can be present during battery failure and concentrations of interest. The AEGL values shown are for a 30-minute exposure. (NR = Not recommended due to insufficient data)

Chemical	IDLH (ppm)	AEGL-3 (ppm)	AEGL-2 (ppm)	AEGL-1 (ppm)
Carbon Monoxide (CO)	1,200	600	150	NR
Carbon Dioxide (CO_2)	40,000	NR	NR	NR
Hydrogen Chloride (HCl)	50	210	43	1.8
Hydrogen Cyanide (HCN)	50	21	10	2.5
Hydrogen Fluoride (HF)	30	62	34	1
Nitrogen Dioxide (NO_2)	13	25	15	0.50
Nitric Oxide (NO)	100	NR	NR	NR
Sulfur Dioxide (SO_2)	100	30	0.75	0.20
Benzene (C_6H_6)	500	5,600	1,100	73
Toluene ($C_6H_5CH_3$)	500	5,200	760	67

4 Site and System Descriptions

4.1 Site Description

The Marici project is a lithium-ion BESS facility that will be located in City of Industry, California. The site will be about 17 miles east of downtown Los Angeles. The location of the site can be seen in Figure 1.

Figure 1: A map showing the location of the Marici site. This image was taken from Google Maps 2025.

The Marici project includes lithium-ion battery energy storage equipment made by Sungrow. Over 600 houses are located within a half-mile of the Marici site. The nearest residential property is 111 ft away from the BESS enclosure at the edge of the site. The site and its close surroundings are shown in Figure 2. Nearby exposures and their approximate distances from the BESS are also shown in Figure 2.

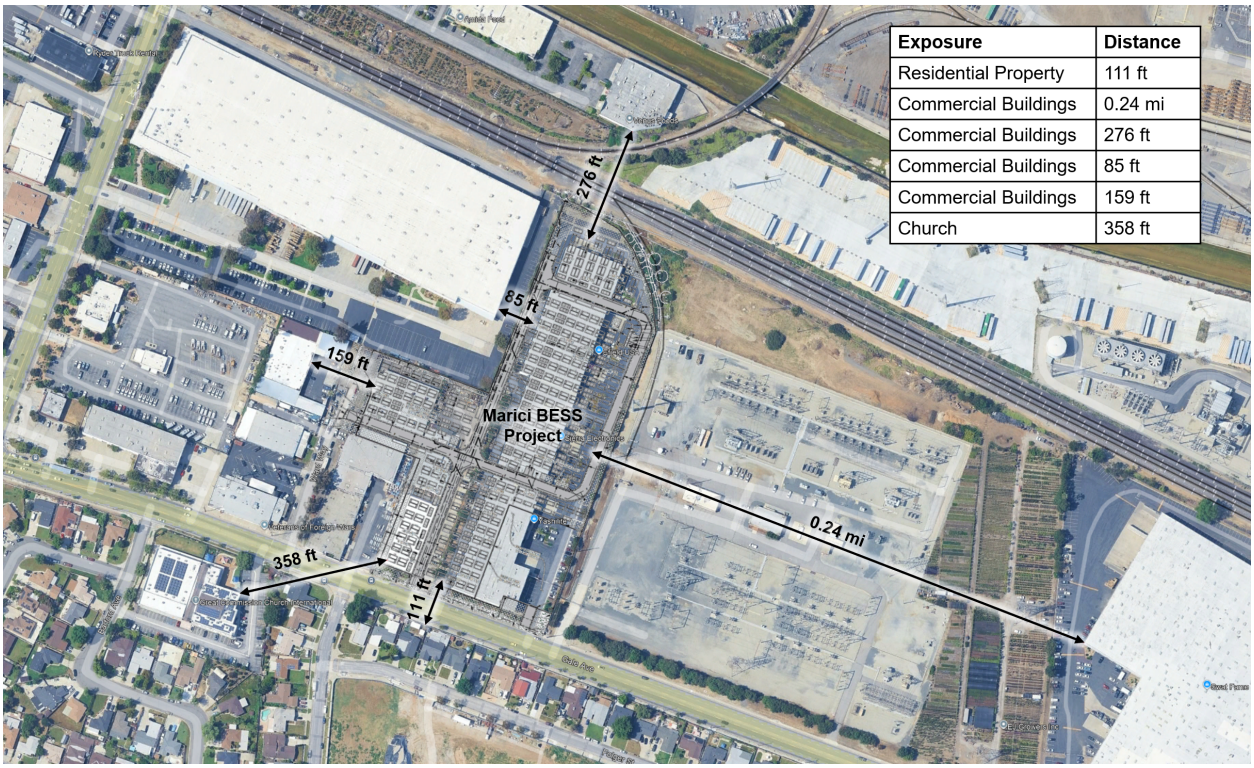

Figure 2: A satellite view of the Marici site location and its surroundings with the site drawing overlaid. The distances shown are measured from the nearest BESS enclosure. This image was taken from Google Earth 2025.

4.1.1 Typical Wind Conditions

In case of a toxic gas release, it is expected that the impacted area would be downwind of the site. The closest weather station for historical data is the San Gabriel Valley Airport site. According to historical wind information from 1985-2024, the prevailing winds generally come from the south-southwest (see Figure 3). The average wind speed is 6.9 mph or 3.08 m/s. Peak wind speeds may exceed 20 mph or 8.9 m/s approximately 0.284% of the time. Conditions are calm 20.1% of the time [14]. Because only a small percentage of winds exceed 20 mph, wind data was further analyzed to find the 99th percentile wind speed for use in the plume model. This wind speed was found to be 15 mph or 6.7 m/s.

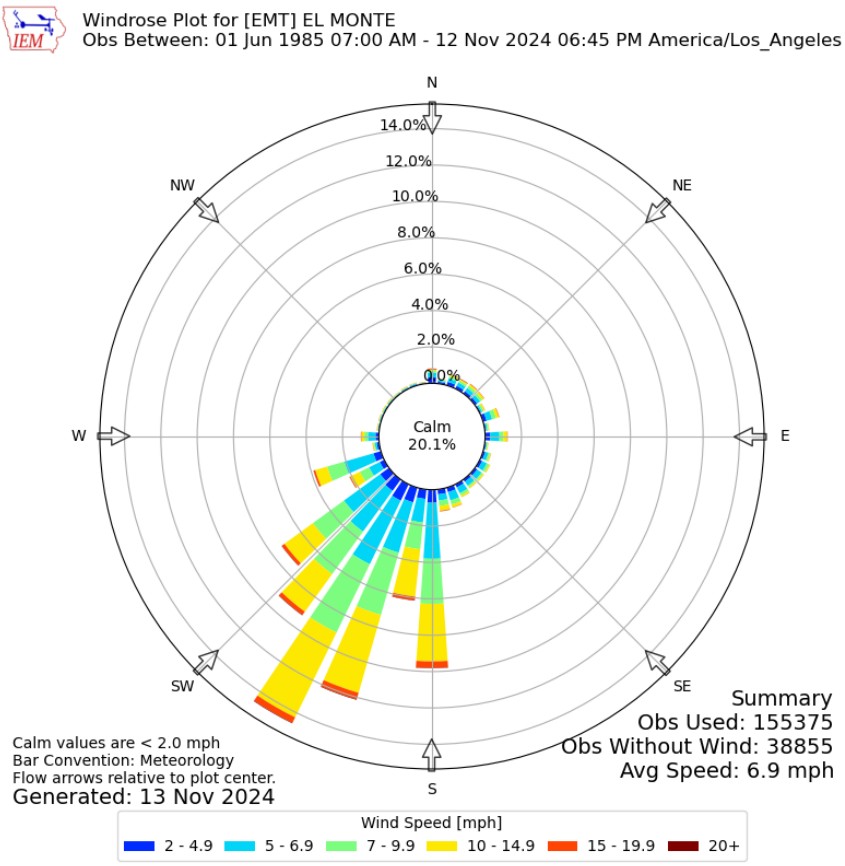

Figure 3: The wind rose for the San Gabriel Valley Airport weather station, which is the closest available station to the Marici site. This image was taken from the Iowa State University Iowa Environmental Mesonet website [14].

4.2 Energy Storage System Description

The Marici project uses modular outdoor-rated PowerTitan 2.0 battery units made by Sungrow. These units contain lithium-ion batteries installed in racks inside the enclosure. Each enclosure contains 6 racks with 8 modules each, for a total of 48 liquid-cooled battery modules. A PCS is underneath each rack [6]. The PowerTitan 2.0 includes a vent panel, heat and smoke detectors, a sound beacon, ventilation system, and flammable gas detector [2]. A PowerTitan 2.0 enclosure is shown in Figure 4.

Figure 4: An image of a Sungrow PowerTitan 2.0 battery storage system [2] [5].

The PowerTitan 2.0 enclosures include an NFPA 69 ventilation system to expel battery vent gas in case of cell failure. This system is designed to prevent an explosive atmosphere. An inlet louver is located on the left side of the enclosure near the bottom, and an exhaust fan is located on top of the enclosure near the right side (see Figure 5). The exhaust fan activates upon detection of hydrogen gas and expels air and vent gas at a rate of 750 m^3/h [7].

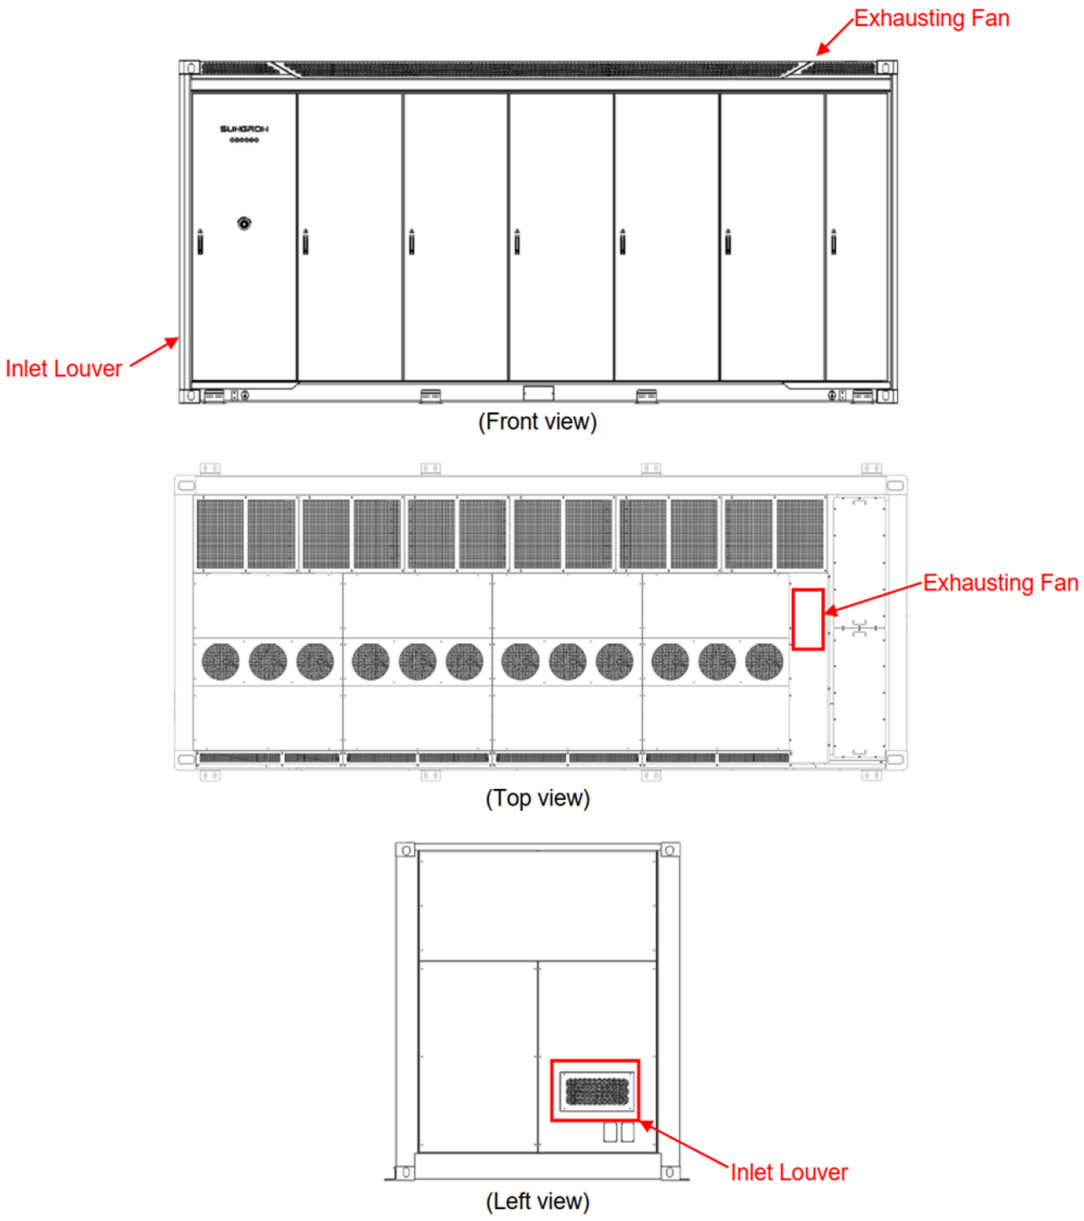

Figure 5: The configuration of the NFPA 69 ventilation system on the PowerTitan 2.0 enclosure [7].

The Marici site will consist of 480 enclosures [1]. The site also includes power conversion systems and other equipment. Figure 6 shows the planned layout of the site.

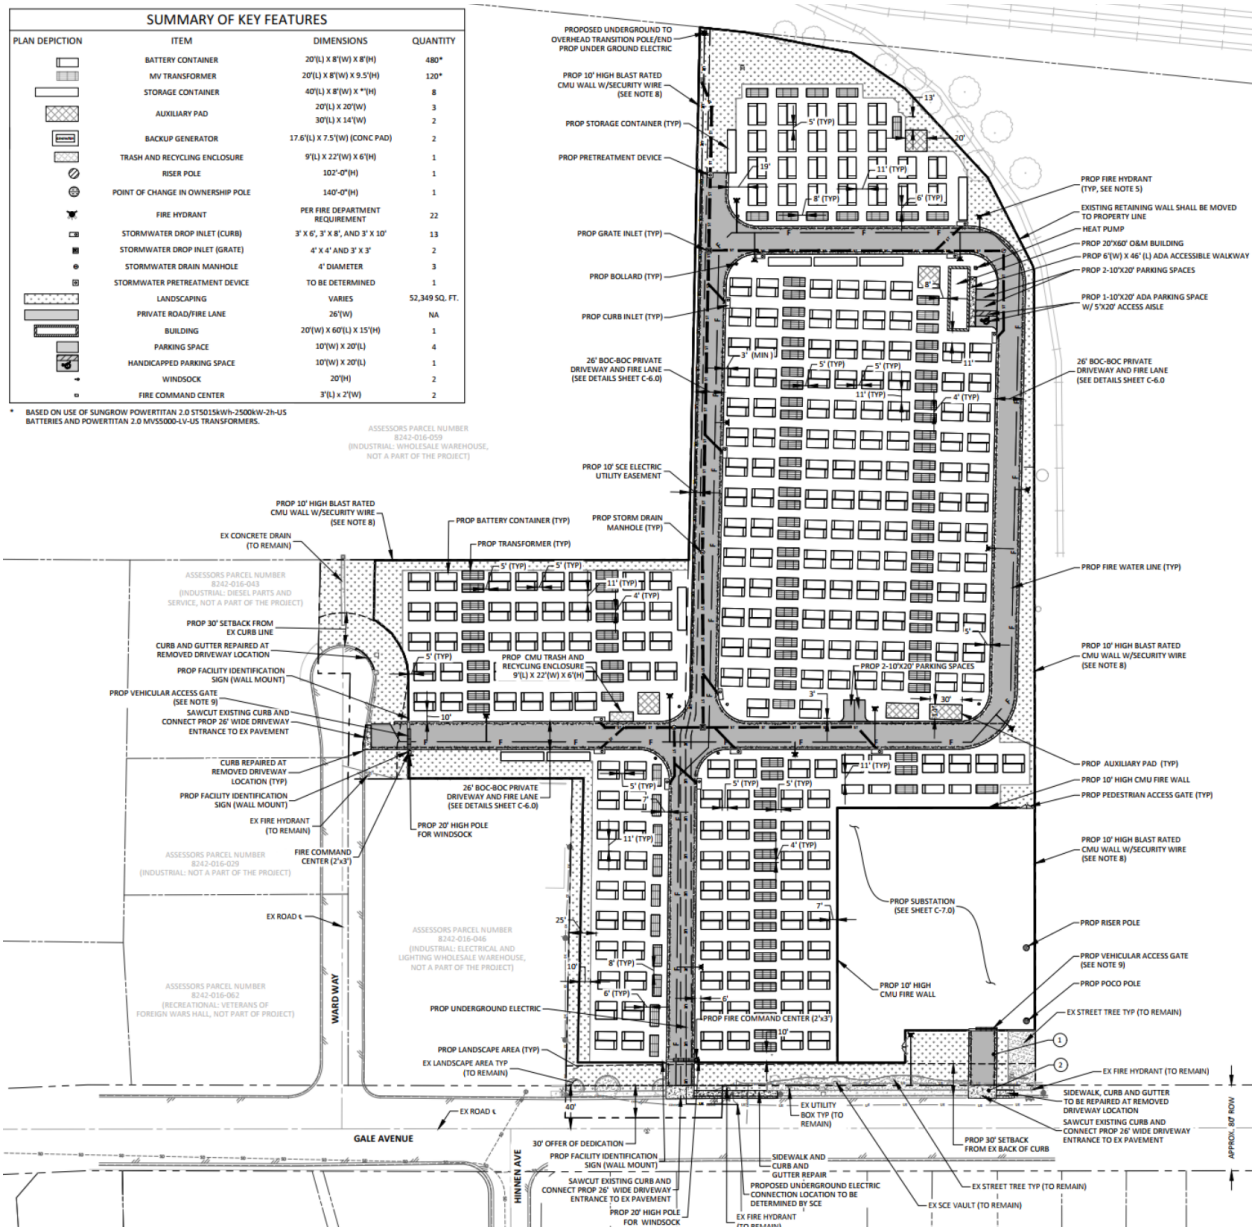

Figure 6: An engineering drawing indicating the planned layout of the Marici site, including the battery enclosures, power conversion systems, and other equipment [1].

5 UL 9540A Test Results

This analysis is based on test data from UL 9540A cell, module, and unit test results. During this testing, a cell is forced into thermal runaway while the outcome is observed. Gases released from the battery or batteries during thermal runaway are captured and analyzed for select chemical species. Depending on the outcome of cell-level testing, additional testing at the module level and full unit level may also be required. For this plume analysis, UL 9540A data from cell-level [3], module-level [4], and unit-level [5] testing was reviewed. The results of these tests are described in Sections 5.1-5.3.

Since UL 9540A is primarily concerned with fire and explosion hazards, typical UL 9540A gas measurements are focused on major combustible gases and combustion products, such as hydrogen, carbon monoxide, carbon dioxide, and various hydrocarbons. Typically, carbon monoxide is the most significant toxicity hazard among the measured gases due to a comparatively low IDLH value and relative abundance in most battery gas. The UL 9540A test report for the CALB Group Co., Ltd. cells indicates that 192 L of gas was captured from a single cell. Of the gas captured, 13.924% by volume was carbon monoxide. This information, along with the remaining composition information, is listed in Table 3.

Cell-level gas composition information is collected by failing an individual cell inside of a sealed pressure vessel that is filled with an inert gas to prevent combustion. This method allows for the capture of the entire volume of emitted gas. Gas compositions from cell experiments are usually measured using a gas chromatograph (GC), which is typically more accurate than measurements taken from exhaust hoods during module and unit testing.

5.1 Cell Test

The system under consideration is comprised of CALB Group Co., Ltd. L173F314 cells, which are 314 Ahr lithium-ion LFP cells [3]. This cell was tested using the UL 9540A method. The results are given in the CSA Group – Kunshan Branch report 80184345 dated 11/17/2023. Figure 7 shows a cell during testing.

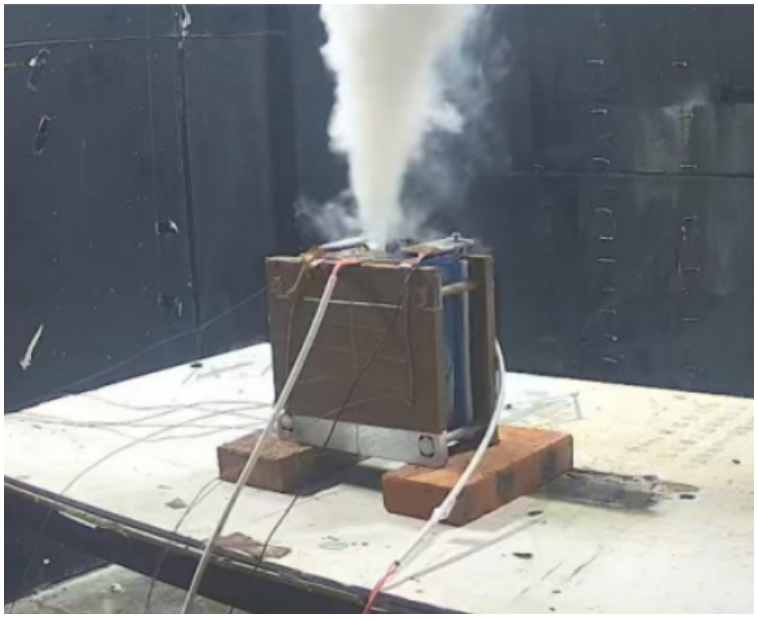

Figure 7: A CALB Group Co., Ltd. L173F314 cell during testing. This image was taken from the UL 9540A cell-level test report [3].

For UL 9540A testing, the L173F314 cells were heated until failure occurred. Cell details and results from UL 9540A testing are provided in Table 2.

The UL 9540A cell report showed that the cells go into thermal runaway and release a mixture of flammable gases when heated externally until failure. The vent gas composition from the UL 9540A cell report is listed in Table 3.

Table 2: Key cell properties from the UL 9540A cell test [3].

Parameter	Value
Cell Manufacturer	CALB Group Co., Ltd.
Cell Model	L173F314
Cell Chemistry	LFP
Cell Nominal Voltage	3.2 V
Cell Capacity	314 Ahr
Volume of Gas Released	192 L
Lower Flammability Limit (LFL) at ambient temperature	6.2%
Lower Flammability Limit (LFL) at venting temperature	5.6%
Burning Velocity (Su)	63.8 $\mathrm{cm/s}$
Maximum Pressure (P_{max})	0.68 MPa

Table 3: The gas composition from the UL 9540A cell test [3]. Model Volume Percent will be addressed in Section 6 later in this document.

Name	Formula	Experimental Volume Percent	Model Volume Percent
Carbon Monoxide	CO	13.924	13.924
Carbon Dioxide	$CO2$	27.237	27.237
Hydrogen	$H2$	44.925	44.925
Methane	$CH4$	6.421	6.421
Acetylene	$C2H2$	0.339	0
Ethylene	$C2H4$	3.827	3.827
Ethane	$C2H6$	0.996	0.996
Propylene	$C3H6$	1.227	0
Propane	$C3H8$	0.322	2.670
C4 Total	$C4H10$	0.651	0
C5 Total	$C5H12$	0.131	0

5.2 Module Test

The CALB Group Co., Ltd. cells are located inside of module model P1044AL-AHA. A module was also tested using the UL 9540A method, and the results can be found in TUVRheinland (Shanghai) Co., Ltd. test report CN23P68X 001 dated 12/16/2023. Each module contains 104 cells in a 104S configuration [4]. Multiple thermocouples were attached for testing as seen in Figure 8.

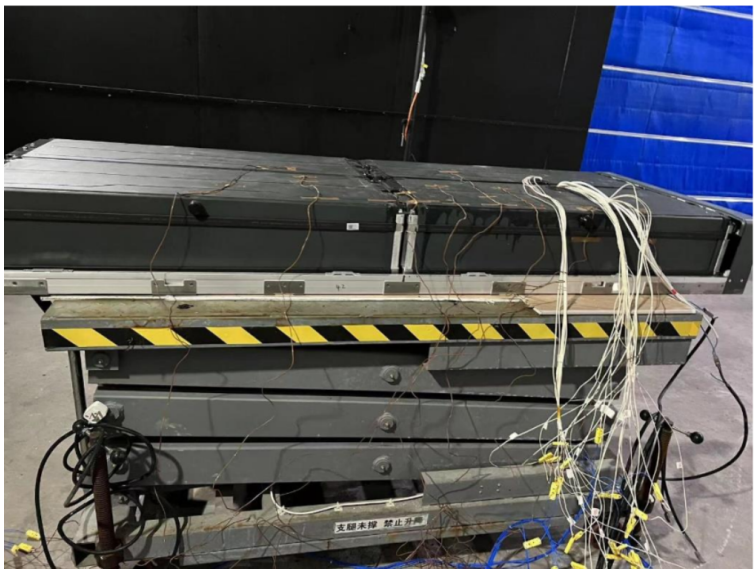

Figure 8: A module prepared for the UL 9540A test. This image was taken from the UL 9540A module-level test report [4].

Heaters were placed between cells 2, 3, and 4 in submodule 1, which was chosen due to its central location within the module. A diagram of the module construction is shown in Figure 9, and the locations of the thermocouples and initiating cells and can be seen in Figure 10. The temperature time history for the test is shown in Figure 11.

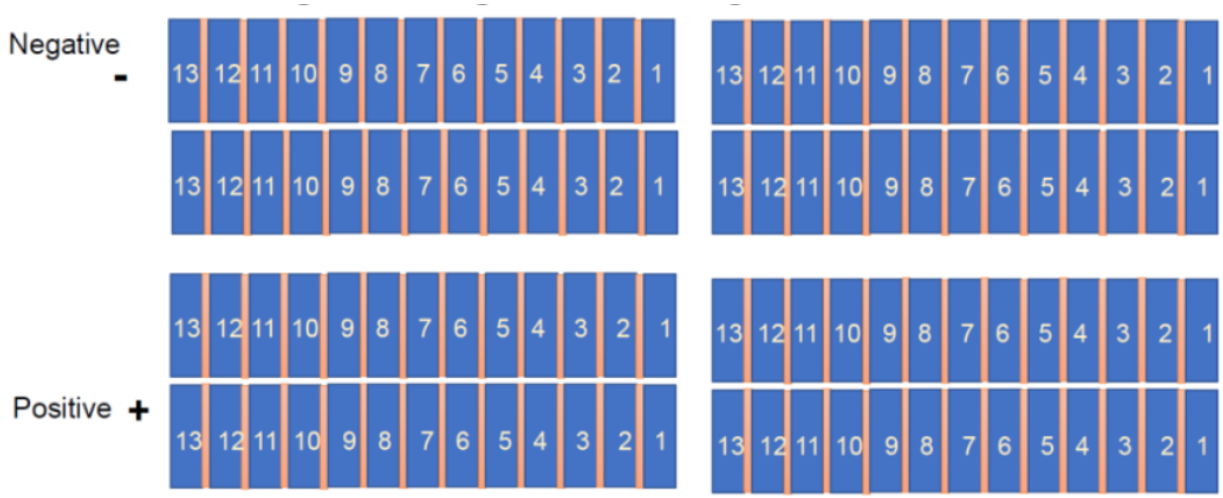

Figure 9: A diagram of the P1044AL-AHA module. This image was taken from the UL 9540A module-level test report [4].

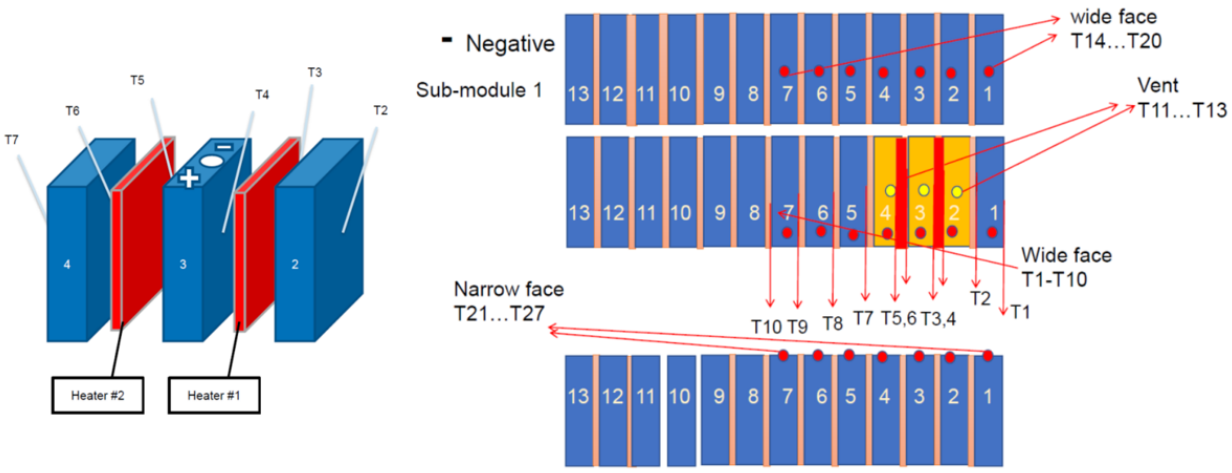

Figure 10: A diagram of the module setup for the UL 9540A test. This image was taken from the UL 9540A module-level test report [4].

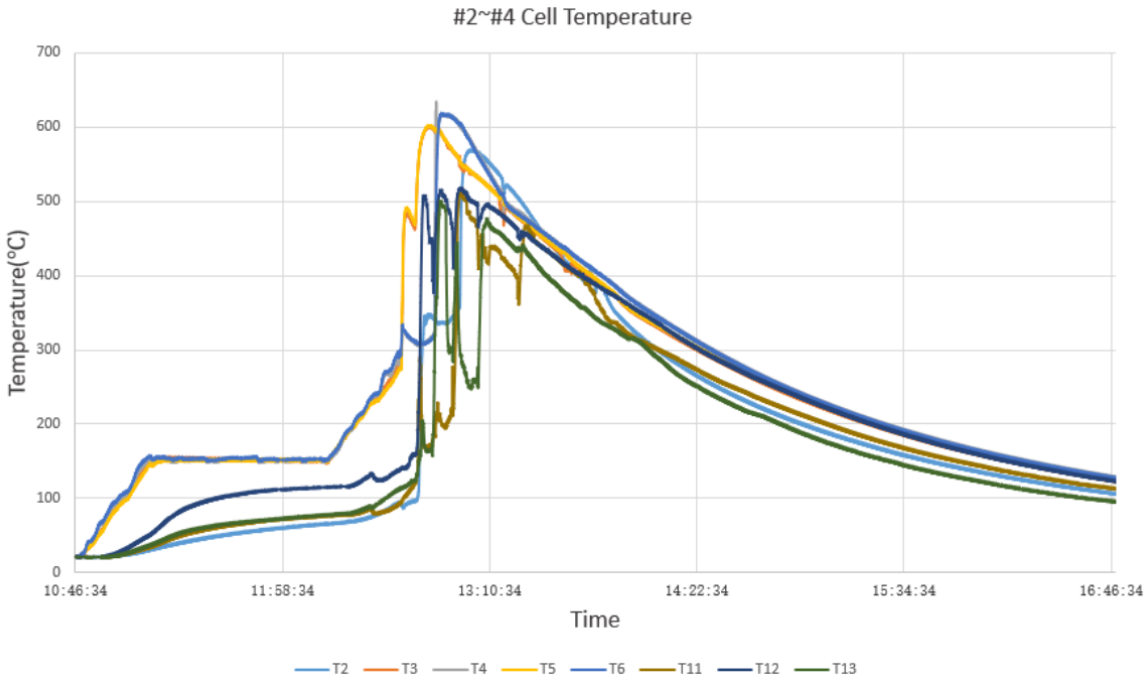

Figure 11: The temperature time history for the initiating cell from the UL 9540A module test. This image taken was from the UL 9540A module-level test report [4].

The initiating cells were heated until thermal runaway occurred. The three initiating cells went into thermal runaway and propagated to two other cells, making five cells in total that failed in thermal runaway [4]. Sparks, flying debris, and external flaming were not observed during the test. Figure 12 shows the module after the test.

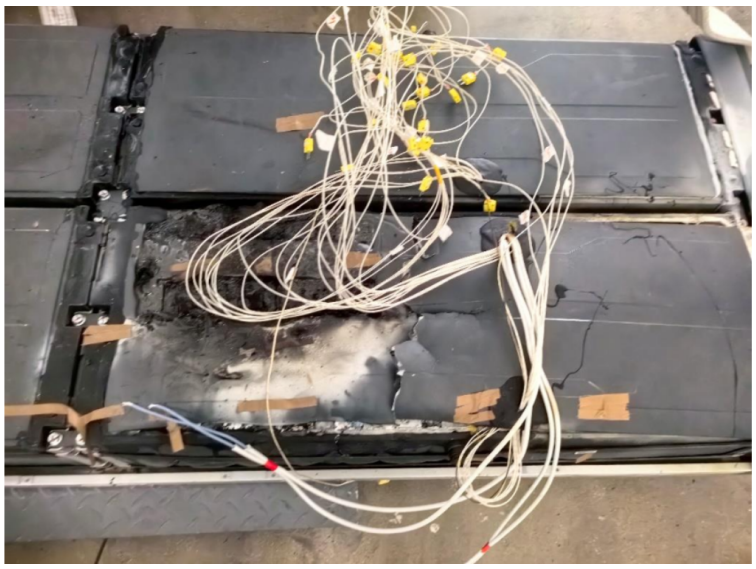

Figure 12: The module after the UL 9540A test. This image was taken from the UL 9540A module-level test report [4].

5.3 Unit Test

The UL 9540A unit test applies to various R0417BL and R0835BL unit configurations and is described in TUVRheinland (Shanghai) Co., Ltd. report CN23JPBV 001 dated 12/16/2023. In this test, a unit comprised of four modules was tested. The unit contained 416 individual cells [5]. The initiating module was configured identically to the module test. This module was then inserted into a full unit, which was placed in proximity to walls and target units. The configuration of the initiating unit is shown in Figure 13, a diagram of the test setup is shown in Figure 14, and a picture of the initiating unit is shown in Figure 15.

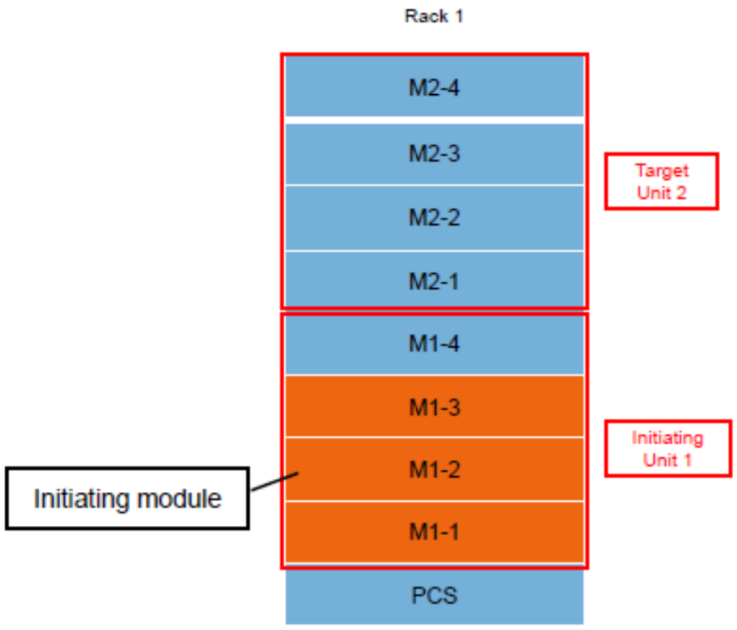

Figure 13: The initiating unit with the initiating module, target modules, and target unit labeled. This image was taken from the UL 9540A unit-level test report [5].

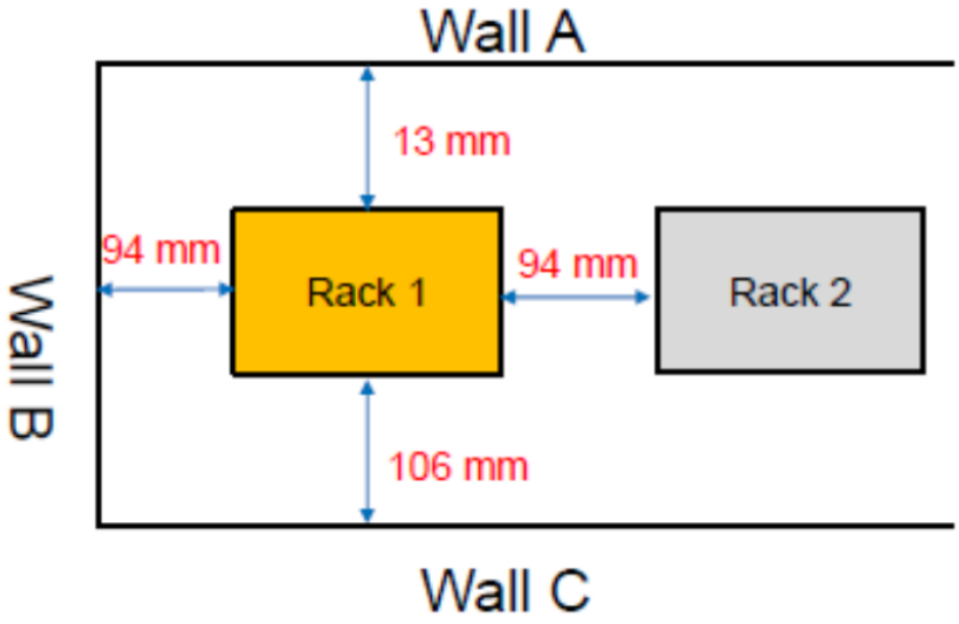

Figure 14: A diagram of the unit test setup. This image was taken from the UL 9540A unit-level test report [5].

Figure 15: A picture of the initiating unit. This image was taken from the UL 9540A unit-level test report [5].

Thermal runaway was initiated by activating the heaters on cells 2, 3, and 4 in submodule 1 in the initiating module. Once thermal runaway began, the power to the heaters was disconnected. The three initiating cells went into thermal runaway and propagated to two other cells, making a total of five failed cells inside the initiating module [5]. Thermal runaway did not propagate outside of the initiating module. Flaming, sparks, and flying debris were not observed.

6 Fire and Toxicity Modeling

Hazard Dynamics used data from the UL 9540A test reports to conduct plume modeling for a number of different failure scenarios. These models included cases of varying wind conditions, differing levels of failure severity, and with or without burning. Each scenario assumes a steady-state release and was modeled for 300 seconds.

Two different heat release rates (HRR) were used to represent two different sizes of fire. The large HRR of 34.8 MW represents a full enclosure burning. This value was calculated using cell and module information from the UL 9540A cell and module tests [4] [3]. In calculating the peak HRR used for the model, it was assumed that all cells and modules burned over the course of two hours (half an hour ramp up, steady burn for an hour, and half an hour ramp down). Flaming propagation between adjacent enclosures was not modeled as available UL 9540A test data did not demonstrate propagation between modules inside of a unit or between units. The small HRR of 2.2 MW was taken from the Heat Flux Analysis for the PowerTitan 2.0 system [6]. This HRR was used to evaluate the consequences of a smaller fire in which the entire enclosure does not burn. The modeled scenarios are shown in Table 4. The wind speeds used in the models will be discussed in Section 6.1.

Table 4: Marici fire plume model scenarios.

Name	Wind Speed (m/s)	Mass Release Rate (kg/s)	HRR (MW)
Small Fire, Low Wind	1.5	0.147	2.2
Small Fire, High Wind	6.7	0.147	2.2
Large Fire, Low Wind	1.5	2.32	34.8
Large Fire, High Wind	6.7	2.32	34.8

The non-fire scenarios model the release of lithium-ion battery vent gas in the absence of burning. Multiple battery vent gas release scenarios were used to model varying levels of thermal runaway propagation. These scenarios include the average module gas release based on the UL 9540A module test, the peak module gas release rate, the maximum gas release rate the NFPA 69 ventilation system can handle before the exhaust exceeds 25% LFL of the battery gases, a gas release rate representative of the failure of a string of batteries, and a gas release rate representative of a full unit failure. These scenarios are summarized in Table 5. Two scenarios consider the average module vent gas release with and without an active ventilation system. For these scenarios, a gas release rate of 0.000387 kg/s was calculated using the overall time cells entered into thermal runaway during the module-level test, the amount of gas released by a single cell during the cell-level test, and the number of cells failed during the module-level test [4] [3]. The calculation can be found in the appendix of this report. This gas release rate approximates the average release rate expected from five cells failing at different times as demonstrated in the module-level test. The peak module gas release rate for the module was taken from the gas release rate profile in the NFPA 69 report by TUV Rheinland [7]. This gas release rate profile shows that the cell failures in the UL 9540A module test did not overlap. Therefore, the highest instantaneous release from one cell was used to represent a worst-case module failure. This peak rate was also used to assess larger failures of a string and a unit. The string failure scenario assumes that two modules are failing at the same time, and the unit failure scenario assumes that four modules fail at the same time. While other modules in a string or unit may also fail, it is unlikely that they would all fail at the same time. Finally, the 25% LFL gas release scenarios were based on the NFPA 69 ventilation system flow rate of 750 m^3/h and an LFL of 6.2% [7] [3].

Table 5: Marici battery vent gas plume model scenarios.

Name	Wind Speed (m/s)	Mass Release Rate (kg/s)
Average module gas release, no ventilation	1.5	0.000387
Average module gas release, NFPA 69 ventilation	1.5	0.000387
Peak module gas release, NFPA 69 ventilation	1.5	.0015
Peak module gas release, NFPA 69 ventilation	6.7	.0015
25% LFL release, NFPA 69 ventilation	1.5	.00273
25% LFL release, NFPA 69 ventilation	6.7	.00273
String gas release, NFPA 69 ventilation	1.5	.0030
String gas release, NFPA 69 ventilation	6.7	.0030
Unit gas release, NFPA 69 ventilation	1.5	.0060
Unit gas release, NFPA 69 ventilation	6.7	.0060

For modeling purposes, the most significant components which account for more than 95% of the gas are modeled in the non-fire gas release mixture, while minor hydrocarbon elements are approximated as propane. The volume percents used in the model can be found in column four of Table 3.

6.1 Model Setup

Computational fluid dynamics (CFD) models of possible toxic and flammable plumes were created using Fire Dynamics Simulator (FDS) version 6.9.1. Fire Dynamics Simulator is a CFD software developed by the National Institute of Standards and Technology (NIST) for fire modeling. The code solves the Navier-Stokes equations using a large-eddy-simulation (LES) approach and is mainly intended for low-speed flows with an emphasis on smoke and heat transport from fires. The code has been extensively validated for a variety of scenarios involving fire, smoke, gas dispersion, and other transport phenomenon. For toxic plume modeling, the model uses grid sizes ranging from 0.25 m (9.8 in) to 2 m (6.6 ft) to capture both the flow near the source (starting 2 m from the enclosure) as well as the dispersion over a large flat downwind area up to 320 m (1050 ft) away from the source as shown in Figure 16. For flammable plume modeling, a smaller, more refined mesh was used, as the flammable region is expected to impact only the near-field region immediately around the BESS enclosure. The refined mesh for these models extends 5 m (16.4 ft) from the enclosure and uses a 0.1 m grid size.

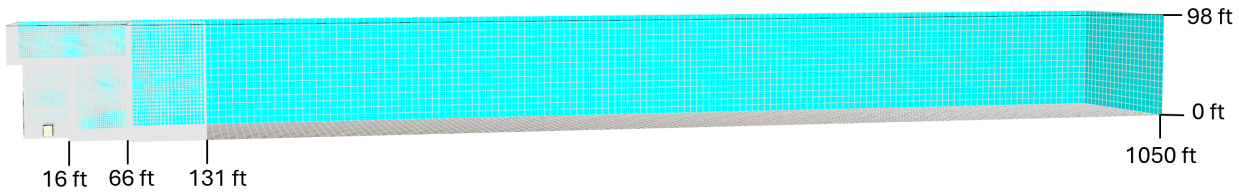

Figure 16: The toxic plume model with the grid displayed. The grid varies in size from 0.25 m near the unit to 2 m starting 40 m away from the unit. The model for flammable plume modeling only includes the portion of the model immediately around the enclosure with a mesh size of 0.1 m.

The EPA Risk Management Program recommends using a wind speed of 1.5 m/s (3.4 mph) and atmospheric stability class F conditions (stable atmosphere) for worst-case plume analysis for accidental chemical releases [15]. This wind speed was used in the model as well as the 99th percentile wind speed for the Marici site, which is roughly 6.7 m/s or 15 mph (see Figure 3). High wind speeds may act to partially overcome the upward tendency of a fire plume. The results presented here approximate worst-case results based on the wind speeds modeled and using stable atmospheric conditions with an Obukhov length of 350 meters. Because the Marici site is in a suburban area, a closed Davenport-Wieringa roughness length of 1.0 m was used.

The wind speeds used in the models are intended to be worst-case. Therefore, results from other wind speeds are expected to be bounded by the wind speeds used. Likewise, modeling a stable atmosphere, in which released gases would tend to stay near ground-level, is considered worst-case. Stable conditions may include fog, because the stability prevents vertical movement of the moist air near the ground. The moisture in fog conditions is not expected to make a plume resulting from battery vent gas release or a fire any worse. Rain during a BESS failure incident is expected to result in a less severe plume than modeled because the falling water could encourage mixing and dispersion over a wider area.

6.2 Plume Toxicity Results

Results were collected for battery vent gas concentrations (non-fire scenarios) and combustion product concentrations (fire scenarios). The gas concentration of interest was the concentration at 2 m (6.6 ft) above ground level. This corresponds to the concentration that people would experience when standing on level ground near an incident. Figure 17 shows the average vent gas concentrations, and Figure 18 shows the average combustion product gas concentrations

at 2 m (6.6 ft) above ground level at different distances downwind of the unit. Figure 17 shows that vent gas concentrations remain relatively low even near the enclosure and diminish significantly away from the enclosure in scenarios without fire. For the scenarios with fire, overall combustion product concentrations at 2 m (6.6 ft) above ground level remain low with wind speeds of 1.5 m/s (3.4 mph). However, the fire scenarios with high winds speeds result in high combustion product concentrations near the enclosure. These concentrations drop quickly away from the burning enclosure. The modeled high wind speed was 6.7 m/s (15 mph), which is the 99th percentile wind speed at the Marici site. However, since toxic gases are only a fraction of the total battery vent gas or combustion products, toxic gas concentrations would be a fraction of these values.

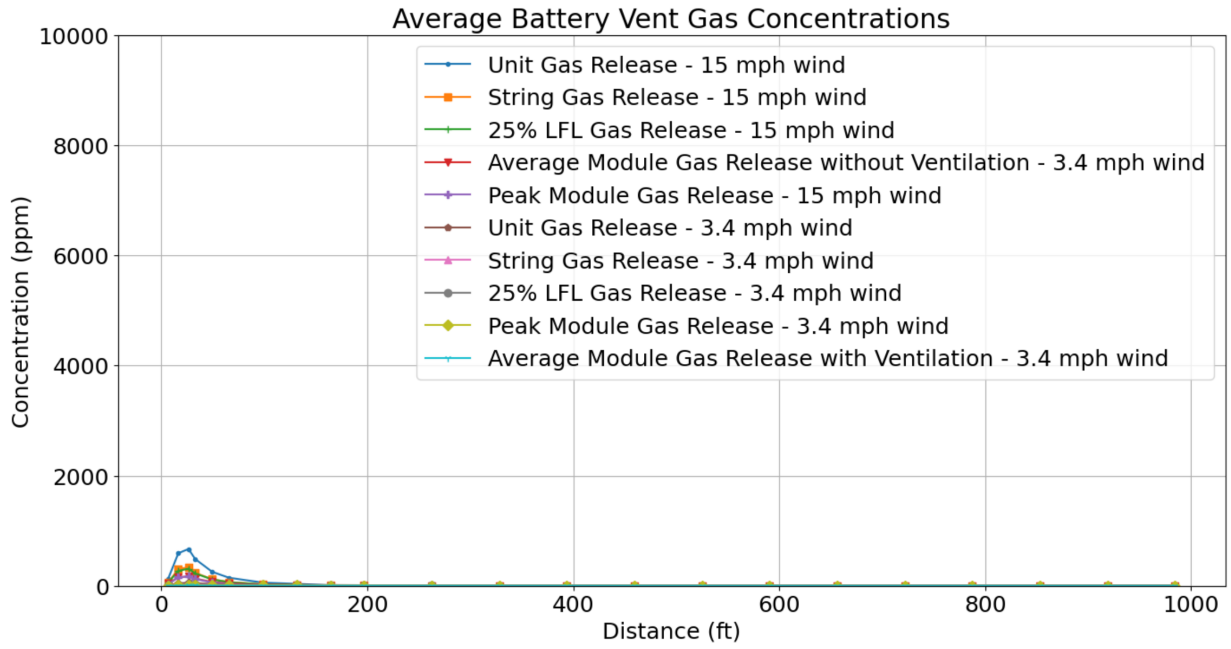

Figure 17: The average battery vent gas concentration versus the downwind distance for different gas release model scenarios.

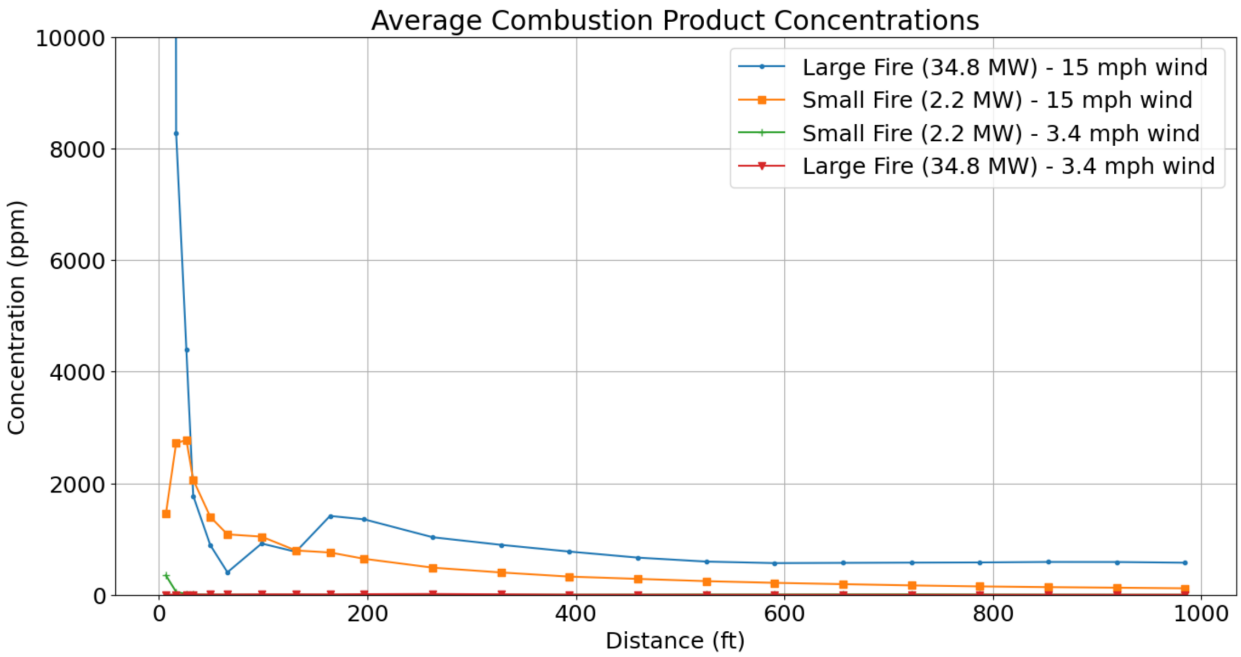

Figure 18: The average combustion products concentration versus the downwind distance for different fire model scenarios.

The trajectory of the battery vent gas coming out of the enclosure in scenarios without burning depends on the size of gas release, whether the ventilation system is active, and the wind speed. Figure 19 shows an average module gas release with no ventilation, while Figure 20 shows an average module gas release with ventilation. Because the exhaust fan is on top of the enclosure, it lofts the battery gas upward when activated. This results in much of the battery gas being above the 2 m (6.6 ft) level and more rapid mixing of the battery gas with the surrounding air.

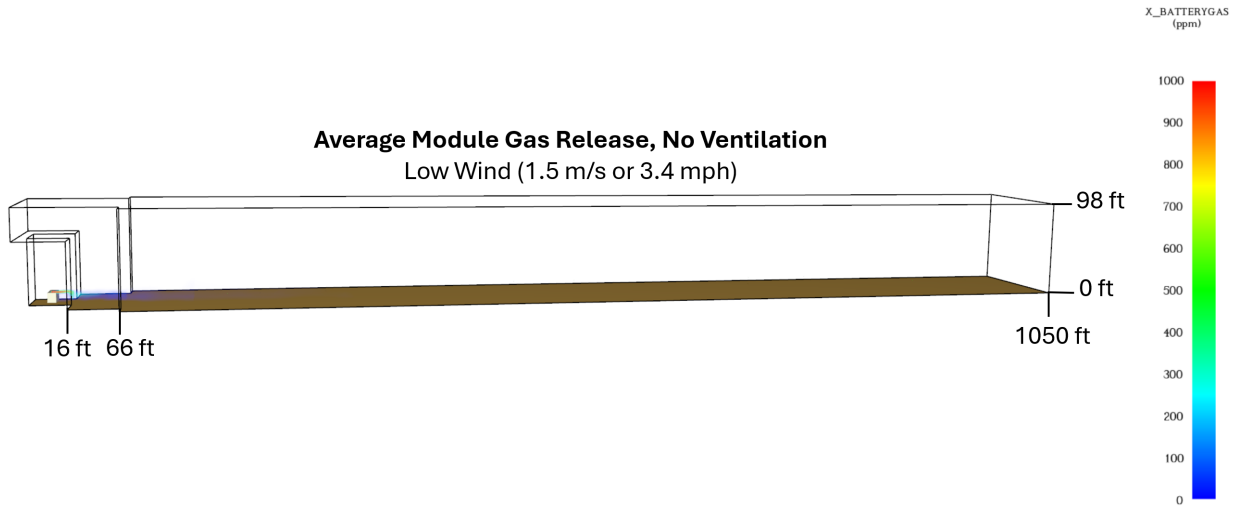

Figure 19: The model for an average module gas release scenario with no ventilation and low wind speeds. X_BATTERYGAS is the concentration of battery vent gas in ppm. The distances shown are measured from the front of the enclosure.

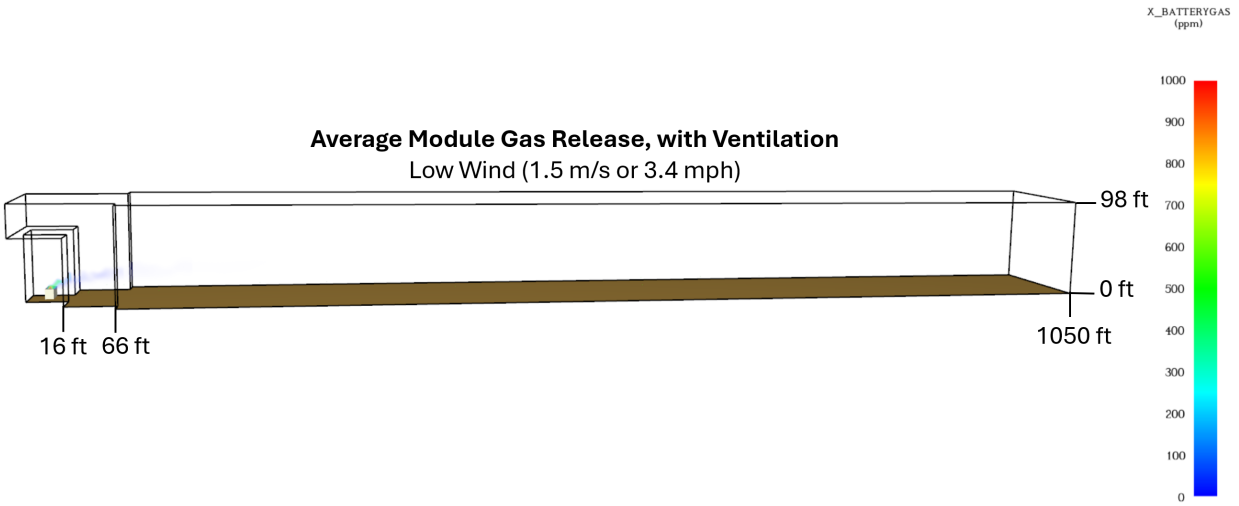

Figure 20: The model for an average module gas release scenario with ventilation and low wind speeds. X_BATTERYGAS is the concentration of battery vent gas in ppm. The distances shown are measured from the front of the enclosure.

The speed of the wind also affects the path and mixing of the battery vent gas expelled from the enclosure. Figure 21 shows a unit gas release under high wind conditions. In this scenario, the vent gas is lower to the ground and disperses more quickly than the low wind unit gas release scenario shown in Figure 22.

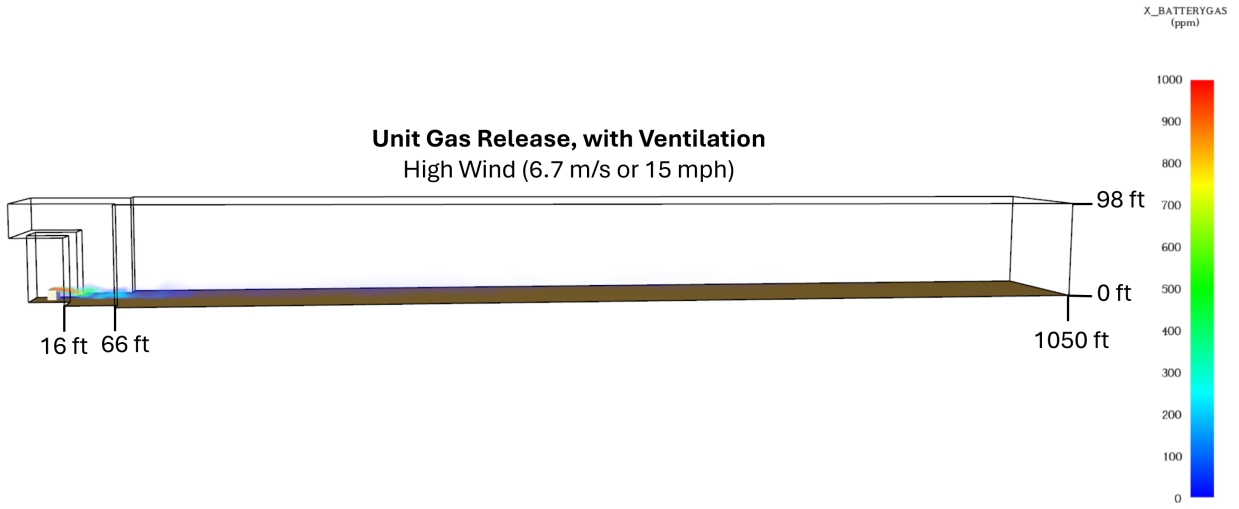

Figure 21: The model for a unit gas release scenario with ventilation and high wind speeds. X_BATTERYGAS is the concentration of battery vent gas in ppm. The distances shown are measured from the front of the enclosure.

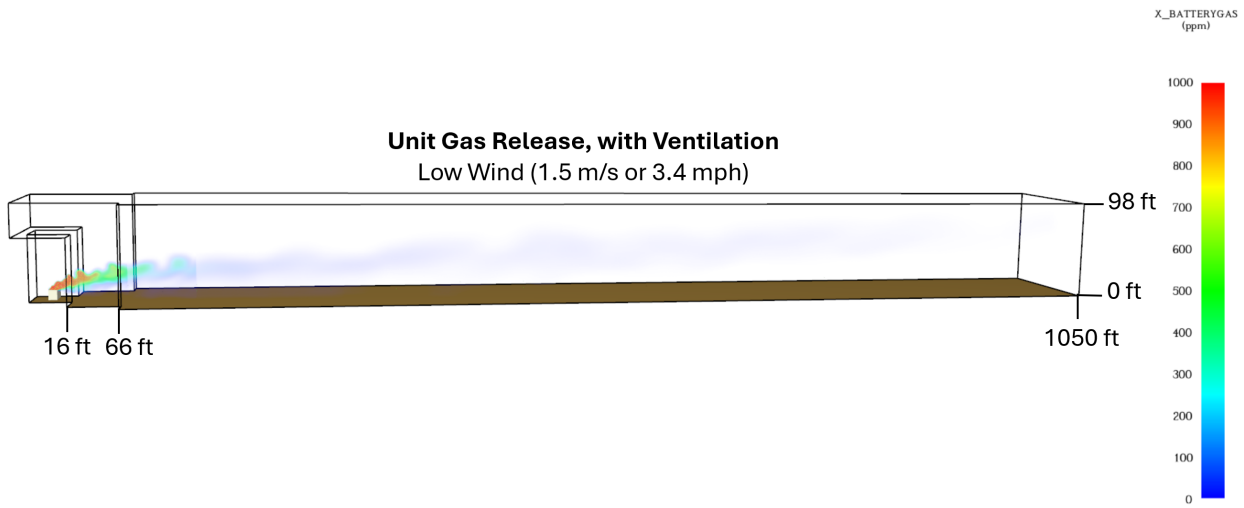

Figure 22: The model for a unit gas release scenario with ventilation and low wind speeds. X_BATTERYGAS is the concentration of battery vent gas in ppm. The distances shown are measured from the front of the enclosure.

The fire scenarios with greater wind speeds resulted in higher concentrations of combustion products 2 m (6.6 ft) above ground level. The heat from fire conditions makes gases more buoyant such that they rise away from the ground. In most common wind conditions, fire product concentrations are low at ground level. However, under conditions of high wind, this buoyant effect may be partially overcome. The scenarios with both fire and high winds yielded the highest gas concentrations at the greatest distances. Figure 23 shows the model with a full unit fire at high wind speeds. This figure shows that the hot combustion products do not rise immediately due to high wind conditions, but they do rise gradually. Additionally, mixing occurs as the combustion products move away from the enclosure. In contrast, Figure 24 shows that the combustion products rise immediately under low wind conditions.

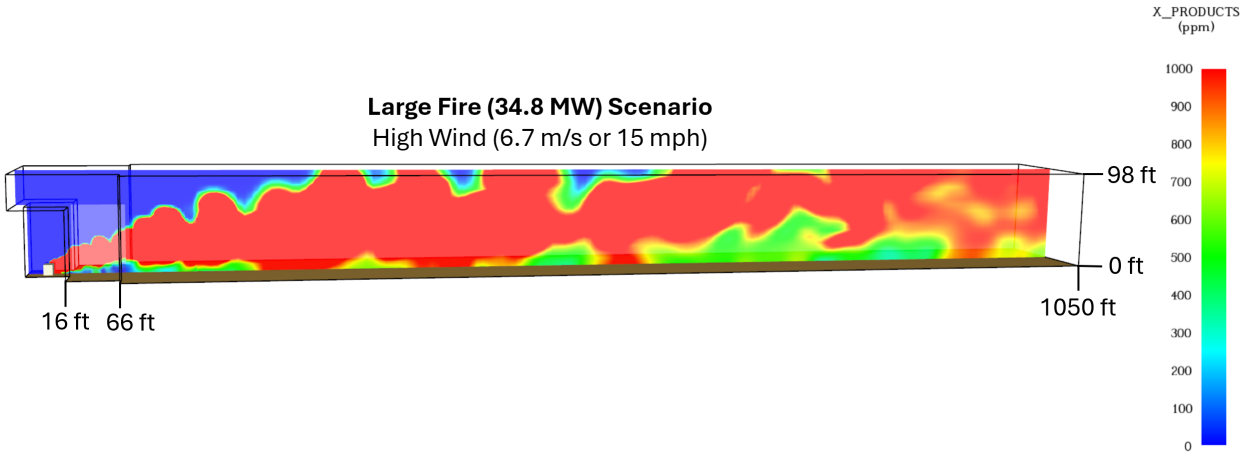

Figure 23: The model of a full unit fire with high wind conditions. In this scenario, the combustion products do not rise immediately due to high wind conditions, but they do rise over time while also mixing with air. X_PRODUCTS is the concentration of combustion products in ppm. The distances shown are measured from the front of the enclosure.

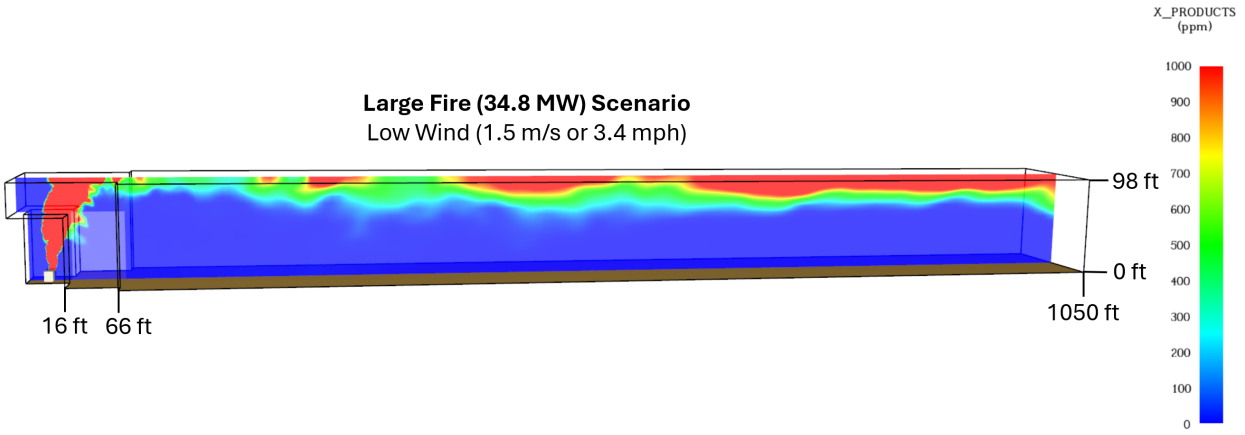

Figure 24: The model of a full unit fire with low wind conditions. In this scenario, the combustion products rise immediately and stay elevated for long distances. X_PRODUCTS is the concentration of combustion products in ppm. The distances shown are measured from the front of the enclosure.

Figure 25 shows that for a smaller fire with high winds, the combustion products stay near ground level for some distance before mixing occurs. In low wind conditions, combustion products for a small fire also rise but to a lesser degree than for a large fire scenario as shown in Figure 26.

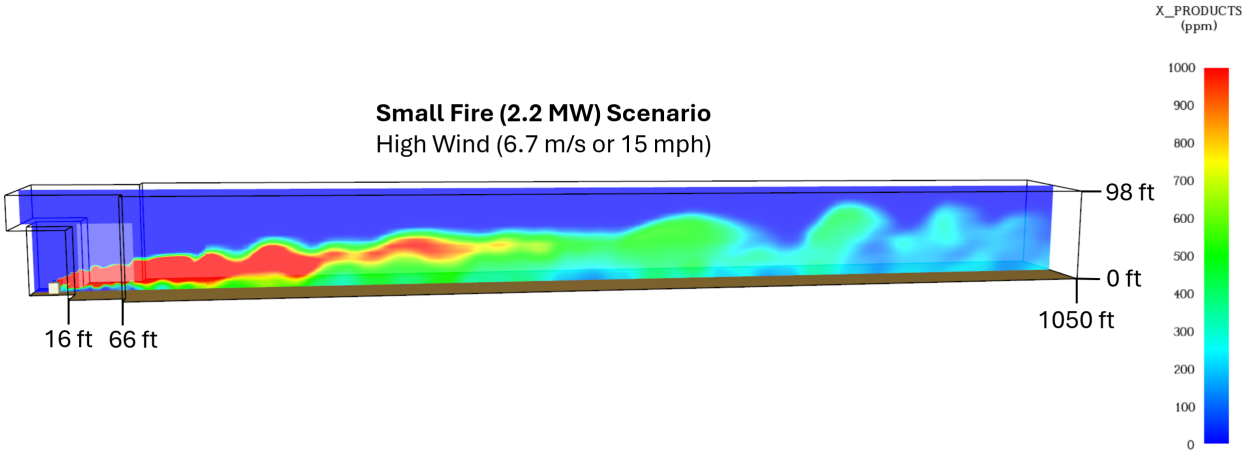

Figure 25: The model of a small fire with high wind conditions. In this scenario, the buoyant effects of the hot gas are partially overcome by the high wind such that the combustion products stay near ground level until mixing occurs. X_PRODUCTS is the concentration of combustion products in ppm. The distances shown are measured from the front of the enclosure.

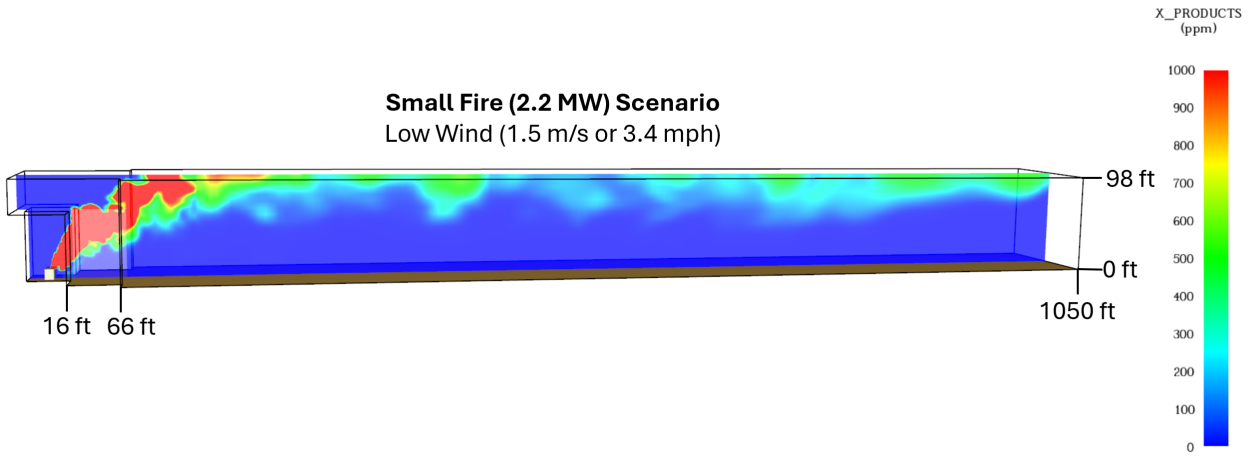

Figure 26: The model of a small fire with low wind conditions. In this scenario, combustion products rise to a lesser degree than in the large fire scenario. X_PRODUCTS is the concentration of combustion products in ppm. The distances shown are measured from the front of the enclosure.

Although multiple toxic gases may be components of battery vent gas, carbon monoxide (CO) is generally the most abundant toxic gas of concern that is regularly reported as part of UL 9540A testing. The UL 9540A cell test report for the PowerTitan 2.0 listed the carbon monoxide concentration as being 13.924%. This value was used to quantify the amount of carbon monoxide in the non-fire scenario. However, it is unclear what concentration of carbon monoxide may persist through a fire. Carbon monoxide concentration in burned gas is likely to be much lower than in the battery gas, as CO is flammable. Carbon monoxide due to incomplete combustion from the fire can also vary depending on the burning environment. Consequently, Hazard Dynamics estimated what amount of carbon monoxide might be present during a fire event using knowledge from work with many battery systems. The CO production was assumed to be 2% of the combustion products. This estimation was based on the measured combustion product concentration from the FDS models. The average carbon monoxide concentration over the 300 m (984 ft) model domain for the gas release scenarios and the fire scenarios are shown in Figure 27 and Figure 28, respectively.

Many different toxicity levels exist for carbon monoxide. The IDLH (Immediately Dangerous to Life and Health) level, the AEGL-3 (life-threatening health effects) level, and the AEGL-2 (serious health effects) level for a 30-minute exposure were discussed in Section 3.2. The EPA does not provide an AEGL-1 (temporary irritation) concentration for carbon monoxide. The IDLH and AEGL levels were created for short-term exposure to chemicals. Other toxicity levels were created to address long-term exposure. The OSHA Permissible Exposure Limits (PELs) were created to protect workers against health effects resulting from exposure to hazardous chemicals. Additionally, the EPA National Ambient Air Quality Standards (NAAQs) were created to protect public health from chemical exposure. Table 6 shows the concentration levels for various carbon monoxide toxicity levels as well as the worst-case distance modeled above the toxicity level. The large fire, high wind scenario was the only scenario with carbon monoxide concentrations that exceeded the IDLH and AEGL levels at 2 m (6.6 ft) above ground level. The unit gas release scenario with high winds resulted in the worst-case distances for the OSHA PEL and EPA NAAQ (1-hr) levels at 2 m (6.6 ft) above ground level. The fire scenarios with low wind remained below all reported toxicity levels at 2 m (6.6 ft) above ground level at all modeled distances.

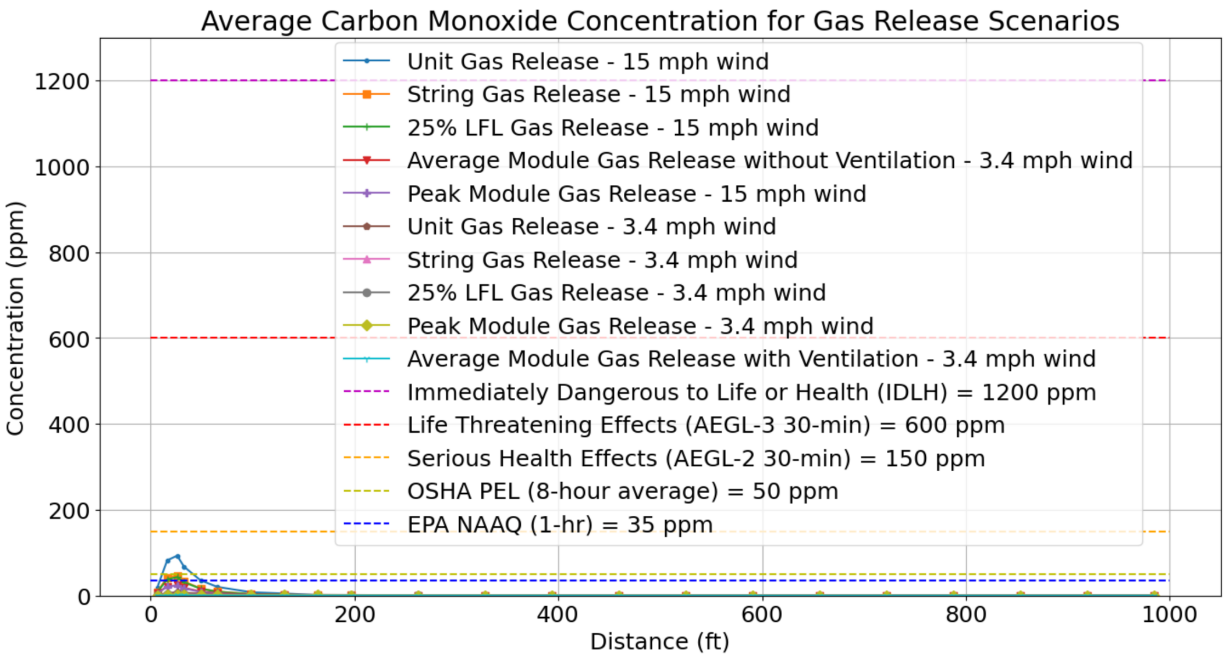

Figure 27: Average carbon monoxide concentrations as a function of distance for different battery vent gas release scenarios. The high wind speed modeled was 6.7 m/s (15 mph), which is the 99th percentile wind speed for the Marici site.

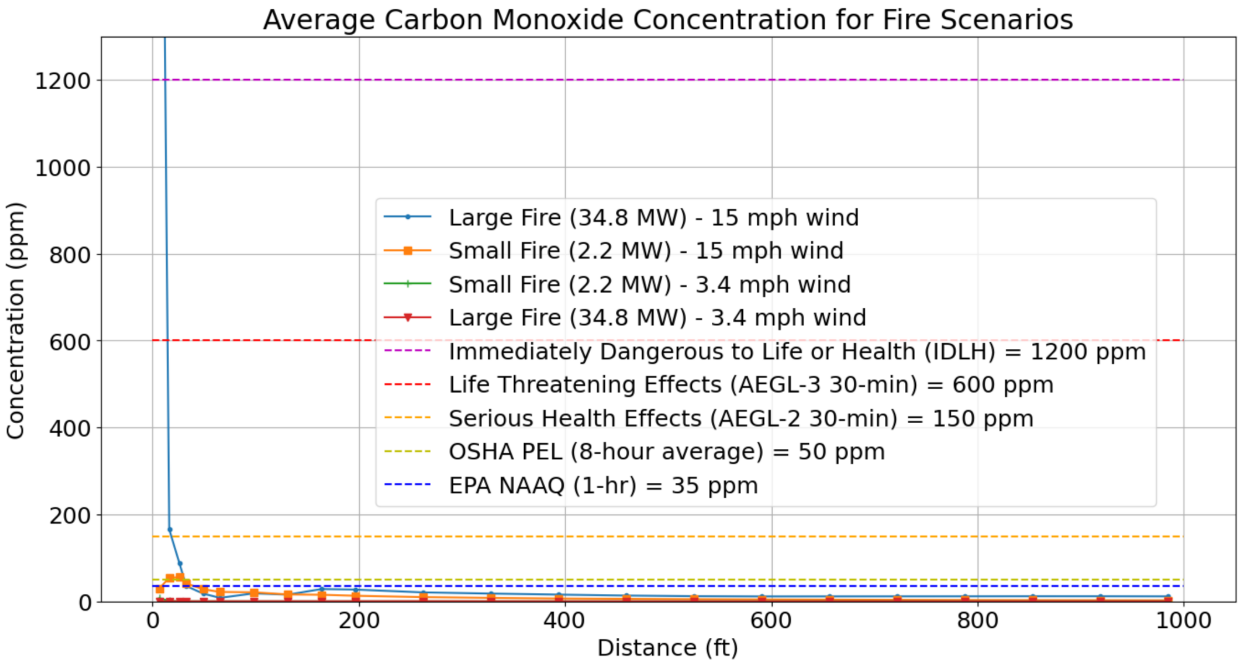

Figure 28: Average carbon monoxide concentrations as a function of distance for different combustion product release scenarios. The high wind speed modeled was 6.7 m/s (15 mph), which is the 99th percentile wind speed for the Marici site.

Table 6: Toxicity levels and worst-case modeled distances for carbon monoxide at 2 m (6.6 ft) above ground level.

Toxicity Level for CO	Concentration (ppm)	Worst-Case Modeled Distance
IDLH	1200	13 ft
AEGL-3 (30-minute)	600	15 ft
AEGL-2 (30-minute)	150	19 ft
OSHA PEL (8-hour average)	50	42 ft
EPA NAAQ (1-hour)	35	50 ft

Hydrogen fluoride (HF) is an acutely toxic gas species whose presence has been reported in some battery failure cases. Due to the high toxicity of hydrogen fluoride at quite low concentrations, it is of growing concern for safety analyses of lithium-ion battery systems. It is well accepted by researchers that a lithium-ion cell can generate HF during thermal runaway. However, HF measurements from large-scale fire tests of ESS are not publicly available. In large-scale ESS fires, hydrogen fluoride production is most likely dominated by the burning of fire-retardant plastics in battery systems rather than by the actual cells. HF generated from the cells can also react with other components such as the module casing or rack structure. In general, the publicly available data on hydrogen fluoride in battery failures remains limited, and the reported quantities vary widely. Amounts of hydrogen fluoride between 0 L/Wh and 0.24 L/Wh have been reported [8]. This indicates that HF could represent a significant percentage of the produced gas or not be present in significant amounts. The manner in which this value depends on cell chemistry, state of charge, or other factors is not well understood. Hydrogen fluoride is highly reactive with a range of materials including metals and various organic compounds. It is unclear whether substantial HF concentrations persist at a distance away from larger module, rack, and ESS scales. Hydrogen fluoride can be emitted from combustion of plastic components in the ESS, such as wiring insulation and module or rack enclosure casings. Although these plastics are commonly fire-retarded, fire-retardant plastics can be overwhelmed if the severity of the fire is sufficiently large. Such fire-retardant plastics are commonly found in non-battery applications and may pose similar emission hazards during fire conditions. While some testing laboratories will provide HF data, it is not currently required by UL 9540A or other standards currently in use in the United States. Hydrogen fluoride data was not provided for the PowerTitan 2.0 system. It is recommended that additional fire testing be performed in order to quantify what levels of hydrogen fluoride may exist for the PowerTitan 2.0.

Typically, hydrocarbons such as benzene and toluene are the only toxic gas concentrations other than carbon monoxide that are measured as part of the UL 9540A testing process. These do not present significant toxicity hazards compared to carbon monoxide and hydrogen fluoride, as their concentrations in battery gas are usually orders of magnitude less while having generally higher AEGL concentrations than CO and HF. For the CALB Group Co., Ltd. cells, the benzene and toluene concentrations were not reported.

6.3 Flammable Gas Plume

Several thermal runaway (TR) scenarios were considered for the flammable gas plume analysis: (1) Average TR of a single module, (2) Peak TR of a single module, (3) TR of a string of modules, and (4) TR of a BESS unit. The details of the scenarios can be found in Table 5. The average module thermal runaway scenario without ventilation resulted in a flammable region (battery vent gas concentration above LFL) that extended less than .1 m (4 in) vertically only directly over the exhaust fan (see Figure 29). The same gas release with ventilation did not result in a flammable region due to the dilution of battery gas resulting from air being mixed in by the exhaust fan. Next, the unit gas release cases were run as bounding scenarios. Neither the low wind nor the high wind unit gas release scenario resulted in the formation of a flammable cloud outside of the enclosure. Again, the battery gas was sufficiently diluted by the NFPA 69 ventilation system

such that the concentration of battery vent gas did not exceed LFL outside of the enclosure. Because the unit gas release scenarios did not result in a flammable cloud outside of the enclosure due to the active ventilation system diluting the gas, the active ventilation system will also prevent formation of flammable gas clouds during module and string release scenarios. However, steady-state analyses, as considered here, are unable to quantify formation of smaller regions of flammable gas that can form due to intermittent or unsteady flow conditions. To qualitatively evaluate formation of these types of flammable gas clouds, battery gas concentrations at 1/2-LFL and 1/4-LFL were also evaluated. The worst-case regions for the unit gas release scenarios are shown in Figure 30. These results are also shown in Table 7. Since the flammable gas cloud is less far reaching than the toxic gas cloud, appropriate setbacks will be dictated by toxic gas plume results.

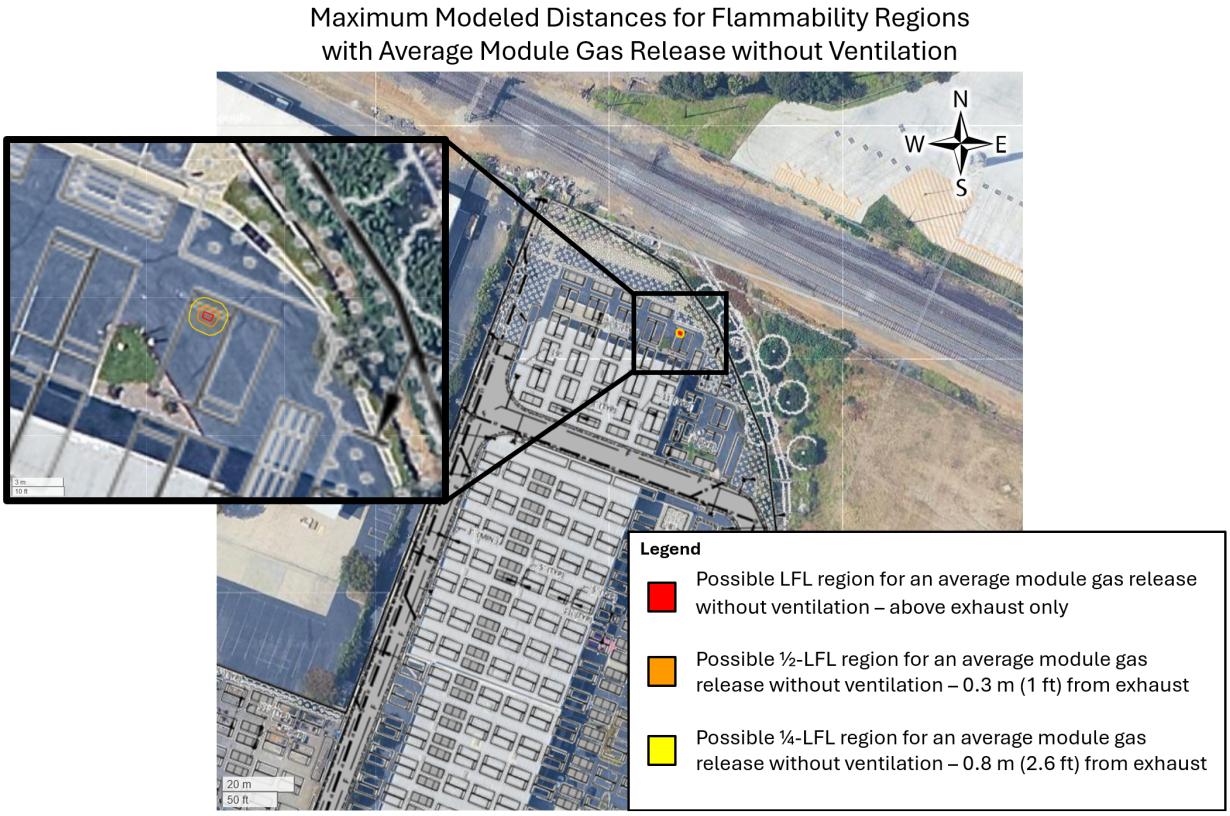

Figure 29: The worst-case battery vent gas regions for LFL, 1/2-LFL, and 1/4-LFL for an average module gas release without ventilation.

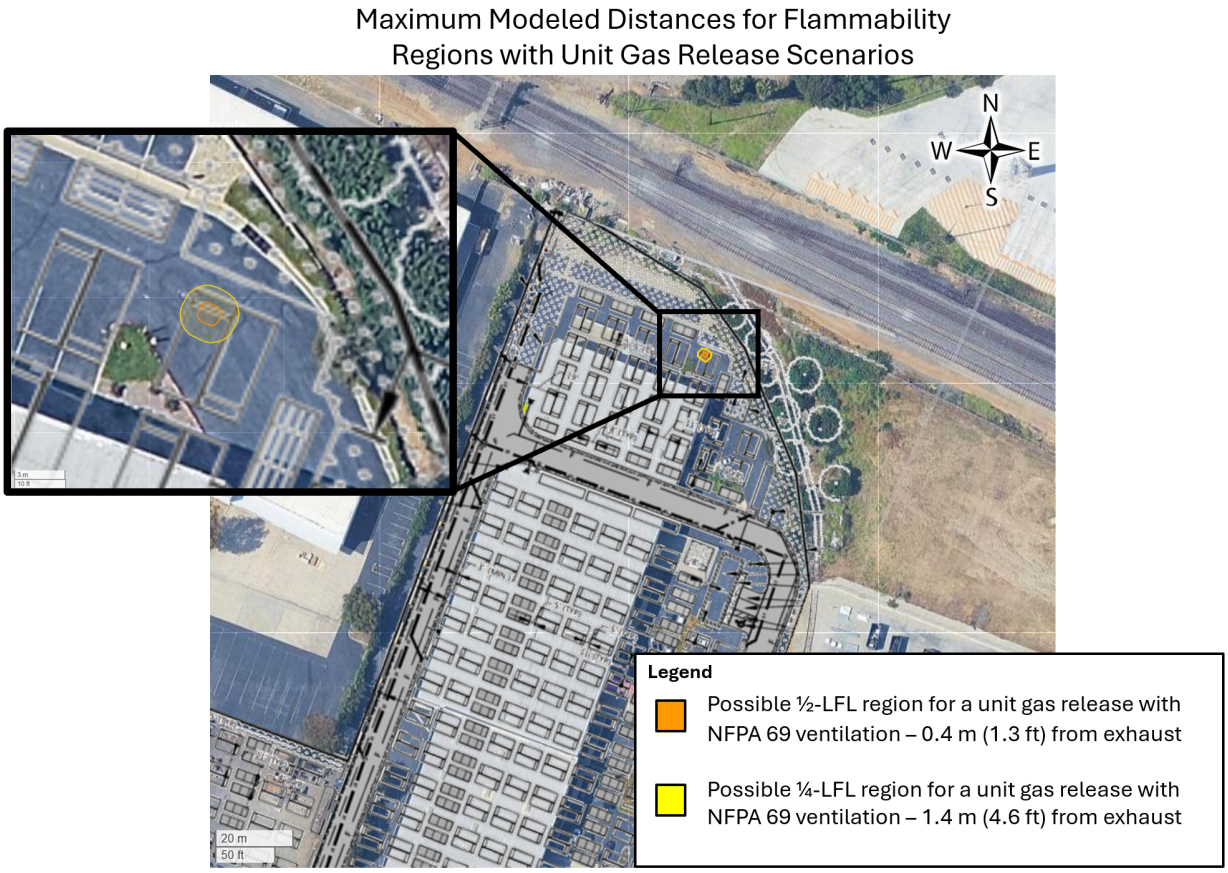

Figure 30: The worst-case battery vent gas regions for 1/2-LFL and 1/4-LFL for the unit gas release scenarios. Note that the battery vent gas concentrations did not reach LFL anywhere outside of the enclosure due to dilution resulting from the NFPA 69 ventilation system.

Table 7: The worst-case modeled distances for flammable regions outside of the enclosure

Scenario	LFL	1/2-LFL	1/4-LFL
Average Module Gas Release, No Ventilation, Low Wind	Above exhaust only	0.3 m (1 ft) from exhaust	0.8 m (2.6 ft) from exhaust
Average Module Gas Release, NFPA 69 Ventilation, Low Wind	NA	NA	NA
Unit Gas Release, NFPA 69 Ventilation, Low Wind	NA	0.4 m (1.3 ft) from exhaust	1.4 m (4.6 ft)t from exhaust
Unit Gas Release, NFPA 69 Ventilation, High Wind	NA	0.3 m (1 ft) from exhaust	1.1 m (3.6 ft) from exhaust

7 Emergency Response Considerations

This section provides emergency response considerations based on the plume modeling results. These considerations are based on CO toxicity hazards. A more complete discussion of emergency response considerations is typically included in separate Emergency Response Plan

or Guideline (ERP/ERG) documents. As discussed above, UL 9540A does not require measurement of hydrogen fluoride (HF) during testing, and HF data was not provided for the PowerTitan 2.0 system. As such, HF concentrations were not evaluated. Responders should be aware that smoke plumes may contain HF and other common toxic combustion products and, at a minimum, should follow procedures for protection against toxic combustion products in smoke.

- For a single involved unit in worst-case modeled conditions, concentrations at 2 m (6.6 ft) above ground level are not expected to exceed AEGL-2 for CO (150 ppm) beyond 19 ft from the enclosure. Evacuation of personnel and people within the facility property lines is recommended. Personnel should be evacuated to locations upwind of the facility. Concentrations 2 m (6.6 ft) above ground level that exceed EPA NAAQ (1-hour) limits (35 ppm) are not expected to extend more than 50 ft from the enclosure. This concentration may extend into neighboring parking lots and public ways. During a failure event, evacuation of buildings immediately adjacent to the site and limiting use of public ways adjacent to the site should be considered.
- CO concentrations may exceed IDLH up to 13 ft from the involved container. All personnel engaged in fire suppression and rescue operations near the involved container should use appropriate PPE such as SCBA and bunker gear.
- CO concentrations may exceed 8-hr OSHA PEL limits up to 42 ft away from an involved unit. It is recommended that support personnel without breathing apparatus and the command post be located at least this distance from involved units.
- Flammable gas clouds are not expected to be present outside of the container if the NFPA 69 ventilation fan is active.
- Although flammable gas hazards do not extend beyond the property line and toxicity hazards over a 30-minute exposure period are likely near the site boundary only during high wind conditions, monitoring of toxic and flammable gas species downwind from the property line may be considered. If toxic and flammable gas species are measured to exceed permissible levels, evacuation or shelter-in-place of downwind areas may be required. Evacuation distances can be informed by Table 6.
- Although the scope of the plume modeling conducted in this study is to address airborne species, water run-off from fire fighting activities may also include metal contaminants and other toxic pollutants. Data on water pollutants was not provided for this specific system. If there is a concern about water pollution, water containment barriers or discontinuation of water use may be considered.
- An offensive attack to extinguish a BESS creates unnecessary risk and is unlikely to be successful. Emergency responders to a BESS failure often deploy a defensive strategy, when possible. When using this strategy, firefighters take up a defensive position to protect neighboring infrastructure rather than attacking the BESS fire itself. The plume modeling conducted in this study considers this scenario as a worst-case bounding condition and models the plume as a steady-state release. If a long duration scenario is expected, common interventions include shelter-in-place and evacuation orders for the surrounding area. The exposure distances discussed above may be used to establish shelter-in-place or evacuation distances. If abnormally high wind conditions beyond the 99% wind speed (15 mph) occur or more than one enclosure fails, toxic gas concentrations may extend beyond the estimated distances. In this case, it may be appropriate to increase evacuation distances beyond the exposure distances discussed above. Air quality monitoring may be helpful in determining evacuation distances.
- The expected duration of a BESS failure event will depend on a range of factors. If a defensive firefighting strategy is used and the fire is limited to a single container, an active fire may last between 2-8 hours based on previous incidents and BESS unit fire testing. If fire does propagate to adjacent containers, the duration of the event could last longer

depending on the number of containers that catch fire as each may burn for 2 to 8 hours. However, several mitigation strategies are commonly deployed to prevent fire propagation from container to container, including appropriate separation between BESS units, use of fire or thermal barriers between units, or hardening of BESS enclosures. Evaluation of fire spread is beyond the scope of this plume study and is more appropriately addressed by the Fire Modeling Analysis.

8 Conclusion

Of the measured toxic gas species for which test data is available, carbon monoxide is of primary concern due to its comparatively high concentrations and toxicity. Carbon monoxide has an IDLH level of 1200 ppm, an AEGL-3 (life-threatening health effects) level for a 30-minute exposure of 600 ppm, and an AEGL-2 (serious health effects) level for a 30-minute exposure of 150 ppm. No AEGL-1 level is provided for CO. Carbon monoxide may constitute up to 13.924% of the unburned battery vent gas based upon the provided UL 9540A cell-level report. Carbon monoxide concentrations 2 m (6.6 ft) from ground level were measured by FDS for the non-fire scenarios and calculated using modeled fire product concentrations and typical carbon monoxide levels present during lithium-ion battery fires for the fire scenarios. The modeled average carbon monoxide concentrations may be immediately dangerous to life and health up to 13 ft, cause life-threatening health effects (exceed the AEGL-3 level) up to 15 ft, and cause serious health effects (exceed the AEGL-2 level) up to approximately 19 ft from the unit in a large fire scenario with high winds. The modeled average carbon monoxide concentrations may exceed EPA NAAQ 1-hr levels and cause physical symptoms up to approximately 50 ft from the unit during a unit thermal runaway gas release scenario with high winds. The modeled high wind speed was 6.7 m/s (15 mph), which is the 99th percentile wind speed at the Marici site. No toxicity consequences were present for the modeled scenarios with low wind conditions. Hydrogen fluoride was not measured during the UL 9540A testing for this system. However, it is has been reported in some battery failure cases. Thus, hydrogen fluoride is a risk, but the exact magnitude of this risk is unknown. If quantification of HF levels are desired, it is recommended that additional fire testing beyond the scope of the UL 9540A testing be performed in order to quantify what levels of hydrogen fluoride may exist for the PowerTitan 2.0. Other measured toxic gases make up only trace amounts of the battery vent gas. Hydrocarbon release quantities are too small to exceed IDLH or AEGL levels at any distance from the unit.

Provided planning documents [1] and publicly available maps indicate that the Marici site is located in an area with residential neighborhoods and commercial buildings. Over 600 houses are located within a half-mile of the Marici site. The nearest residential property is 111 ft away from the BESS enclosure at the edge of the site (see Figure 2). Based on the model results and the prevailing wind direction at the site (from the south-southwest), it is unlikely that toxic levels of carbon monoxide that may result in irreversible or serious health effects would reach populated areas in the event of a single BESS unit experiencing a failure event. Based on worst-case modeled carbon monoxide concentrations that could reach AEGL-2 (irreversible or serious health effects), BESS enclosure setbacks from the property line should either exceed 19 ft or a sufficient and reliable means of notification should be provided for areas where the property line is less than 19 ft from the nearest BESS enclosure. Sufficient and reliable means of notification could include, but are not limited to, visual and audible alarms to alert people who may be in the vicinity of the site or providing procedures requiring site personnel to secure the area in the event of a BESS failure. A larger setback of 50 ft may be considered for sensitive receptors to reduce possible physical symptoms that could result from long-term exposure to low concentrations of carbon monoxide.

Given the uncertainties inherent in modeling and the diversity of possible outcomes, it is recommended that all non-essential personnel evacuate the immediate area and that emergency

response personnel wear SCBA when operating in the vicinity of a unit that is in thermal runaway.

Given the potential risk of toxicity hazards during failure scenarios of the BESS, appropriate emergency response protocols should be considered and developed in collaboration with local emergency personnel. Due to the suburban location of the site, officials may want to consider protective action guidance, especially during high wind conditions. This may include shelter and evacuation actions. These protective actions could be informed by carbon monoxide measurements, HF measurements, or observation of irritating smoke particulates. Evacuation during an event can allow occupants to remove themselves from the incident but poses the risk of exposure during a brief period of evacuation. Evacuation is often a better option for a prolonged event. Based on the model results, evacuation for occupants during an evacuation in proximity to the involved battery system is not likely to cause exposure to IDLH, AEGL-3, or AEGL-2 levels of toxic gases which could cause permanent injury or impede evacuation. Shelter-in-place actions include staying inside and closing windows and doors such that toxic materials do not enter the building. Shelter-in-place may expose people to smaller concentrations of material for a longer period of time and can be a good option for short incidents but becomes unreasonable for long incidents. Figure 31 shows the areas that could have toxic gas concentrations exceeding IDLH (immediately dangerous to life or health), AEGL-3 (life-threatening health effects), and AEGL-2 (serious health effects) based on the worst-case modeled scenarios for high winds at the Marici project site. Areas that could have toxic gas concentrations that exceed OSHA PEL and EPA NAAQ (physical symptoms) are also shown. These distances were measured from the outermost BESS enclosures. Note that this figure does not consider possible hydrogen fluoride concentrations.

Maximum Distances for Toxicity Consequences with
99th Percentile 15 mph High Wind

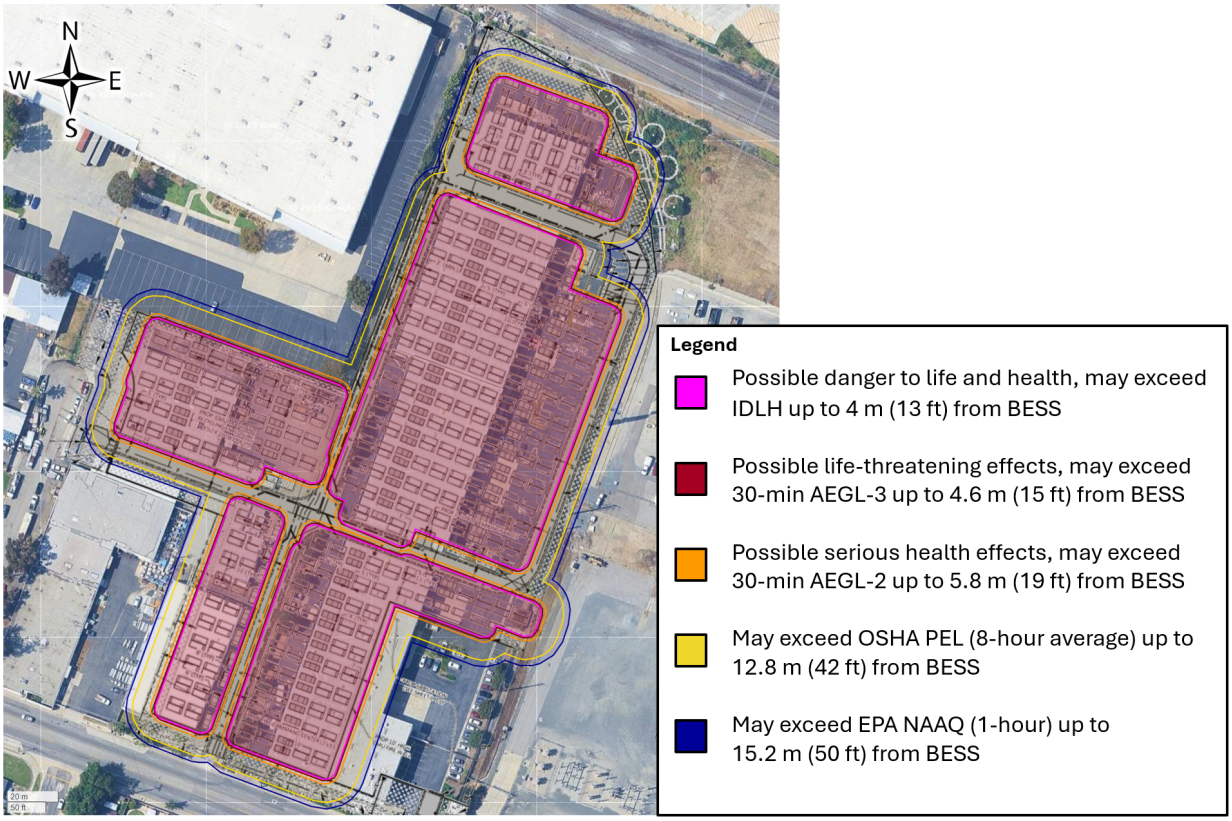

Figure 31: Satellite imagery of the immediate site surroundings with overlaid areas containing possible levels of toxic gases with steady 6.7 m/s (15 mph) wind, which is the 99th percentile wind speed at the Marici site. The buffer colors correspond with the toxicity levels shown in Figures 27 and 28. No toxicity consequences were present for the modeled scenarios with low wind conditions. Note that these buffers do not account for possible hydrogen fluoride concentrations. This image was produced using Open Street Map and Google Maps.

The buffers in Figure 31 show the maximum modeled distances for critical concentrations in all possible wind conditions. In reality, the wind will only come from one direction at a time, so a plume resulting from BESS failure will travel predominantly in one direction. Figure 32 shows a modeled plume for a high wind coming from the prevailing wind direction, which is south-southwest for the Marici site.

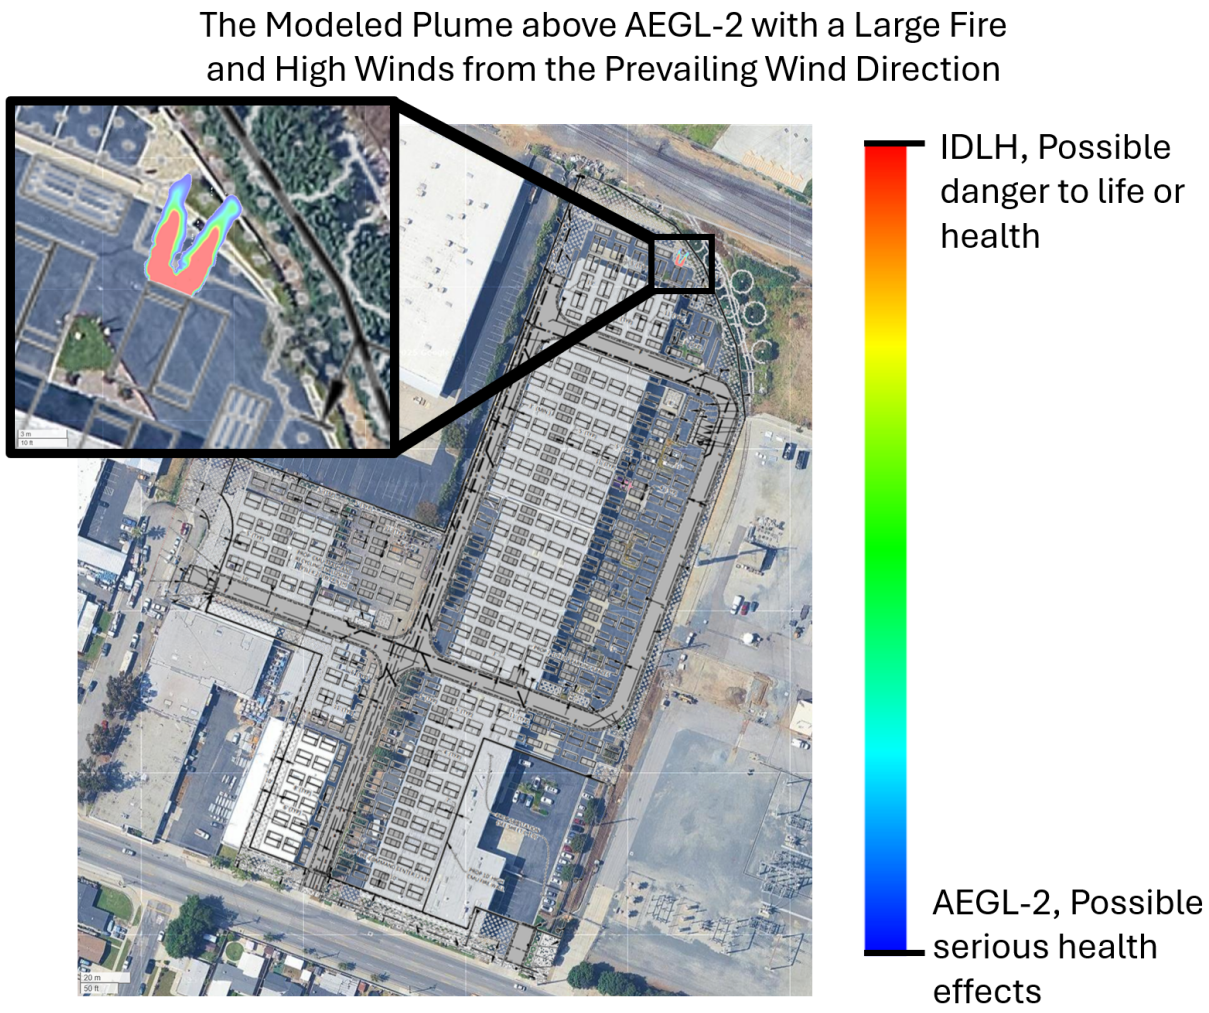

Figure 32: Satellite imagery of the immediate site surroundings with an overlaid plume that was modeled with 15 mph wind from the south-southwest. Note that this plume does not consider possible hydrogen fluoride levels. This image was produced using Open Street Map and Google Maps.

The analysis in this report assumes that only one battery unit fails or burns at a time and that gas release scenarios are consistent with UL 9540A testing. There are several conditions that may lead to worse consequences than those predicted by this model. These conditions include, but are not limited to, thermal runaway propagation exceeding the measured release rate and involvement of multiple units.

9 Limitations

- The study presented in this report is intended for use by client to assist with their decision making related to toxicity risks due to plume transport and evolution from Lithium-ion Battery Energy Storage Systems (BESS). This study specifically does not address other energy storage designs, feasibility of other toxic gas mitigation methods, or compliance to local codes and standards. The scope of the analysis was strictly limited to collection of data relevant to scope.

- The scope of services performed may not adequately address the needs of other users of this report, and any re-use of this report is at the sole risk of the user. This study is based on observations and information available at the time of the analysis. No guarantee or warranty as to future life or performance of any reviewed condition is expressed or implied.
- In the analysis, we have relied on documentation, including but not limited to facility design, BESS design, and other siting documents provided by the client. We cannot verify the correctness of this data and rely on the client for their accuracy. Although we have exercised usual and customary care in the conduct of this analysis, the responsibility for the design and manufacture of the product remains fully with the client.
- The methodology forming the basis of the results presented in this report is based on mathematical modeling of physical systems and data from third parties. Given the nature of these evaluations, significant uncertainties are associated with the various computations. These uncertainties are inherent in the methodology and subsequently in the generated results. Furthermore, the assumptions adopted do not constitute the exclusive set of reasonable assumptions, and use of a different set of assumptions or methodology could produce materially different results.

Executive Summary

Quanta Technology has performed the electromagnetic field, radio interference, audible noise, and corona loss study for the Marici 230 kV Gen-Tie Line using Bonneville Power Administration (BPA) modeling software.

The project involves a single-circuit 230 kV transmission line in Los Angeles, California, extending approximately 22 meters.

This report presents the findings of the study conducted for the 230 kV single-circuit transmission line operating at the maximum voltages (1.05 pu). The study evaluates the electric field, magnetic field, radio interference, audible noise, and corona loss of the transmission line.

1 Introduction

Quanta Technology has performed the electromagnetic field (EMF), radio interference (RI), audible noise (AN), and corona loss study for the Marici 230 kV Gen-Tie Line using Bonneville Power Administration (BPA) modeling software.

The project involves a single-circuit 230 kV transmission line in Los Angeles, California, extending approximately 22 meters. The consists of double-bundle ACSR Mockingbird phase conductor (2034.5 kcmil) and is equipped with dual 48-fiber CentraCore OPGW shield wires and 7 No.7 Alumoweld overhead ground wire.

The modeled segment includes two dead-end steel monopole structures (POCO and POLE1) with an estimated span of 22 meters between poles and pole heights of 105 ft and 140 ft, respectively. Mid-span conductor sag was estimated using standard tension assumptions for ACSR Mockingbird.

The east property line shared with the Walnut Substation is 11 feet 2 inches from the nearest portion of the gen-tie line, and the southern public facing property line is 55 feet 11 inches from the nearest portion of the gen-tie line. The site plan is included in Appendix C.

The analysis was performed under conditions outlined in Section 2.1.1. This report presents the findings of the study conducted for the 230 kV single-circuit transmission line operating at the maximum voltages (1.05 pu). The study evaluates the electric field (EF), magnetic field (MF), radio interference (RI), audible noise (AN), and corona loss of the transmission line.

This report summarizes the results of the study conducted for the proposed 230 kV line operating at its maximum rated voltage. The assessment includes the evaluation of EF, MF, RI, and AN level at the edge of the ROW.

2 Modeling and Methodology

2.1 Gen-Tie Line Modeling

This study models a 230 kV single-circuit transmission line located in Los Angeles, California, with a total line length of approximately 22 meters. These specifications reflect actual site parameters provided by the project engineer and ensure realistic modeling in the BPA software environment.

Figure 1 and Figure 2 show the tower geometry of the transmission line for “Pole 1” and “POCO” tower, respectively. Figure 3 shows the poles and gen-tie line via Google Earth. Figure 4 shows the Tower’s engineering drawings provide by Dashiell.

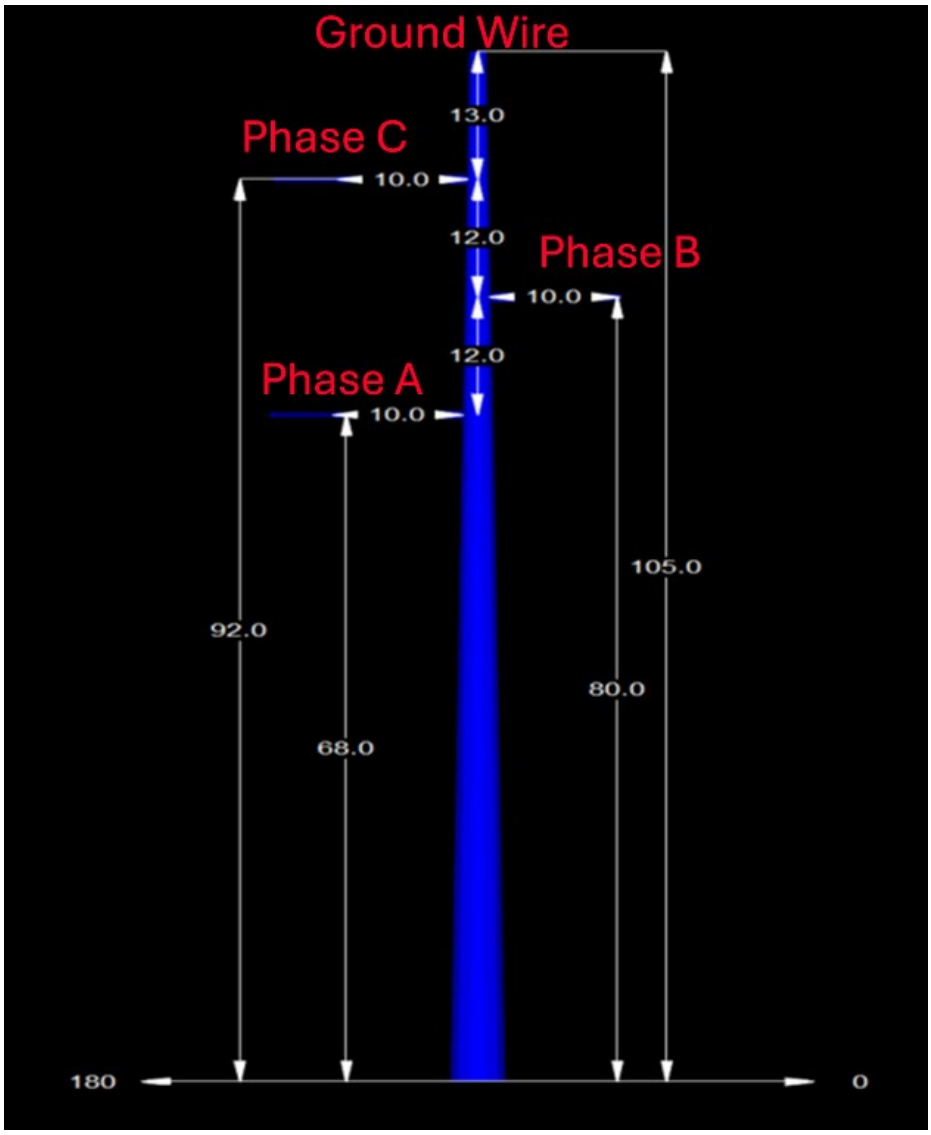

Figure 1. Pole 1 Dimensions

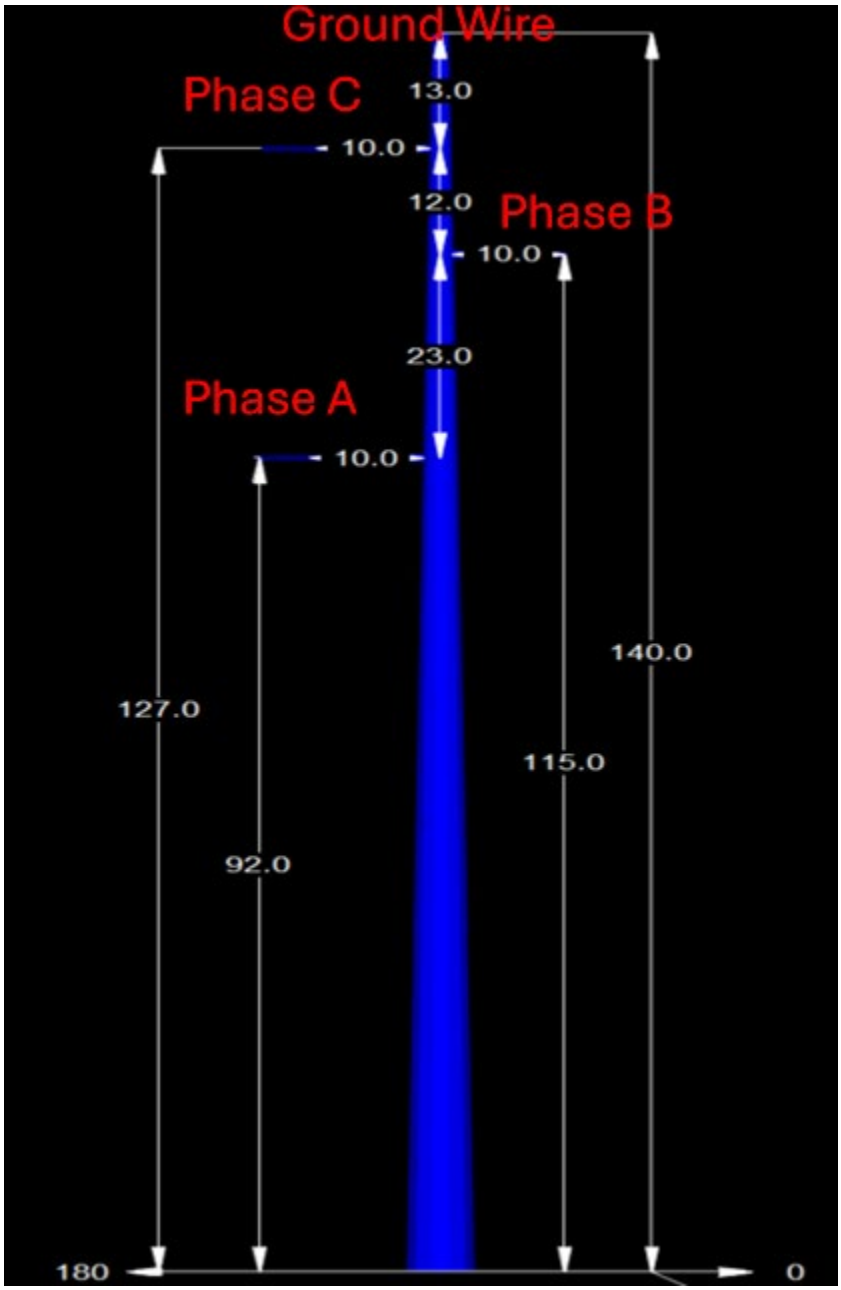

Figure 2.POCO Dimensions

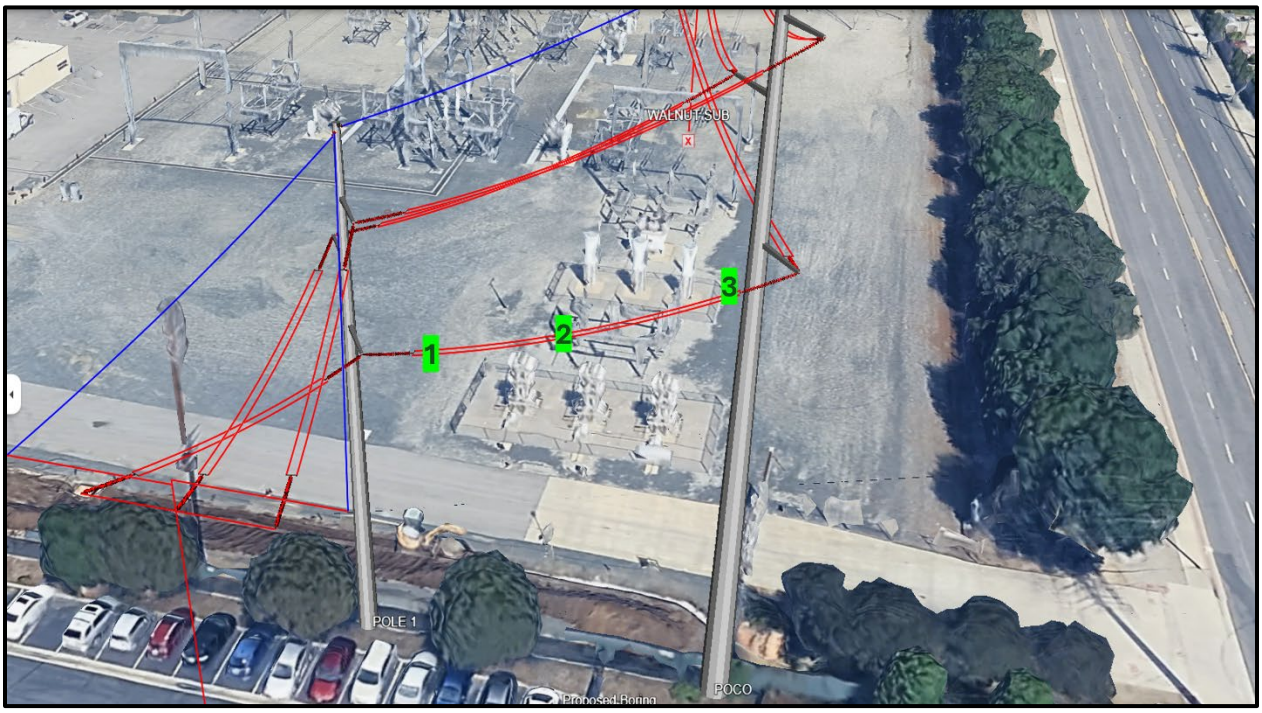

Figure 3. Google Earth Image of the Marici Gen-Tie Line

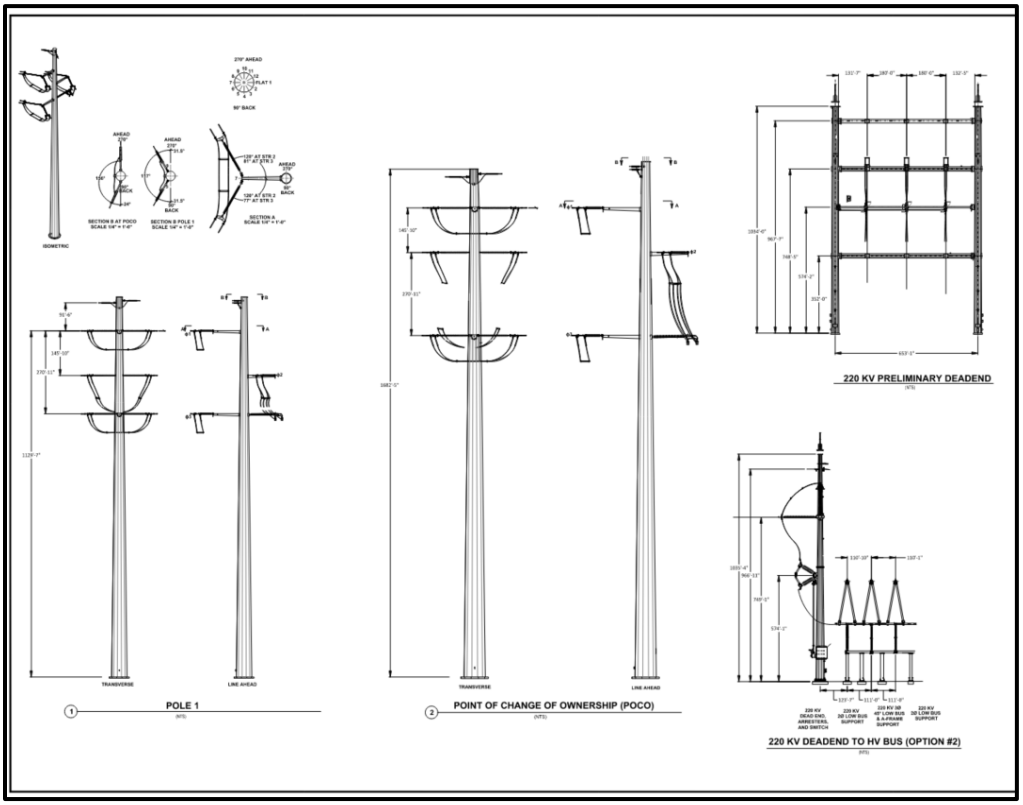

Figure 4. 230 kV Marici Tower Dimensions

These structural and geometric parameters were extracted from Dashiell engineering documentation and validated via geospatial analysis using Google Earth, as illustrated in Figure 3**Error! Reference source not found.**. It is important to note that while the BPA Corona and Field Effects Program inherently assumes symmetric pole heights and therefore applies mid-span sag at the geometric center of the span, the actual installation features asymmetrical pole elevations. Based on the verified site-specific data, Figure 3 confirms that the vertical heights of the phases differ significantly across the two structures, thereby invalidating the assumption of symmetric mid-span clearance. Accordingly, to ensure conservative and realistic modeling, this study adopts the lowest vertical conductor clearance—68 feet (Phase A)—as the reference height for electromagnetic field, audible noise, and radio interference analyses. This approach aligns with industry best practices for worst-case exposure modeling under adverse weather conditions, as stated in Section 2.1.1, in full compliance with BPA simulation standards.

Three locations are modeled across the gen-tie line and are named Point 1, 2, and 3, which are displayed in Figure 3. However, only the worst-case results are displayed in Section 3. All the results are included in Appendix B.

Ground wire	NA	0	140	1	NA	0	No.7 Alumoweld

2.1.1 Assumptions

The following assumptions are used for the study.

- Wind speed: 11.7 ft/s = 8 mph
- Ground conductivity: 1 mmhos/m
- Rain rate: 0.3 in/hour
- Altitude: 305 ft
- Electric field sensor height: 2 meters (6.56 ft)
- Right of Way (ROW): 180 ft
- Phase max current: 1,005 Amp
- Phase voltage: 1.05 PU (241.5kV L-L)

2.2 Methodology

The information below summaries the theory and limits for each calculated value along with further assumptions for these calculations.

1. **Electric Field:** The intensity of the EF is measured 2 meters above the ground [1]. In the study, the conductor height is assumed to be the minimum clearance to the ground. According to the Institute of Electrical and Electronics Engineers (IEEE) Standard C95.6, under normal load conditions, for the public, the maximum permissible exposure (MPE) to electric fields is 10 kV/m, and MPE outside the line right of way (ROW) is 5 kV/m [2].
2. **Magnetic Field:** The intensity of the MF is measured 2 meters above the ground [1]. In the study, the conductor height is assumed to be the minimum clearance to the ground. Based upon the technical research, the International Commission on Non-Ionizing Radiation Protection (ICNIRP) has made a series of recommendations for limiting EMF exposure to human beings: public exposure to magnetic fields should be limited to 2,000 mG (200 mT) (ICNIRP 2010). The International Commission on Non-ionizing Radiation Protection (INIRC-IRPA) recommends a public exposure MF guideline of 1 gauss [3].
3. **Audible Noise:** The audible noise is measured 2 m above the ground. In the study, the conductor height is assumed to be the minimum clearance to the ground [1]. The U.S. Department of Housing and Urban Development Noise Guidebook Chapter 2 (24 CFR Section 51.101(a)(8)) recommends that exterior areas of frequent human use follow the EPA guideline of 55 dBA L_{dn}. However, the same Section 51.101(a)(8) indicates that a noise level of up to 65 dBA L_{dn} could be considered acceptable [4].
4. **Radio Interference:** The RI antenna is placed 2 m above the ground. In this study, the conductor height is assumed to be the minimum clearance to the ground. There is no specific RI environmental limit applicable to this study.[1]

3 EMF Study Results

3.1 Electric Field

The electric field at the sensor height (2 meters) is displayed as a function of lateral distance from the center of the lines.

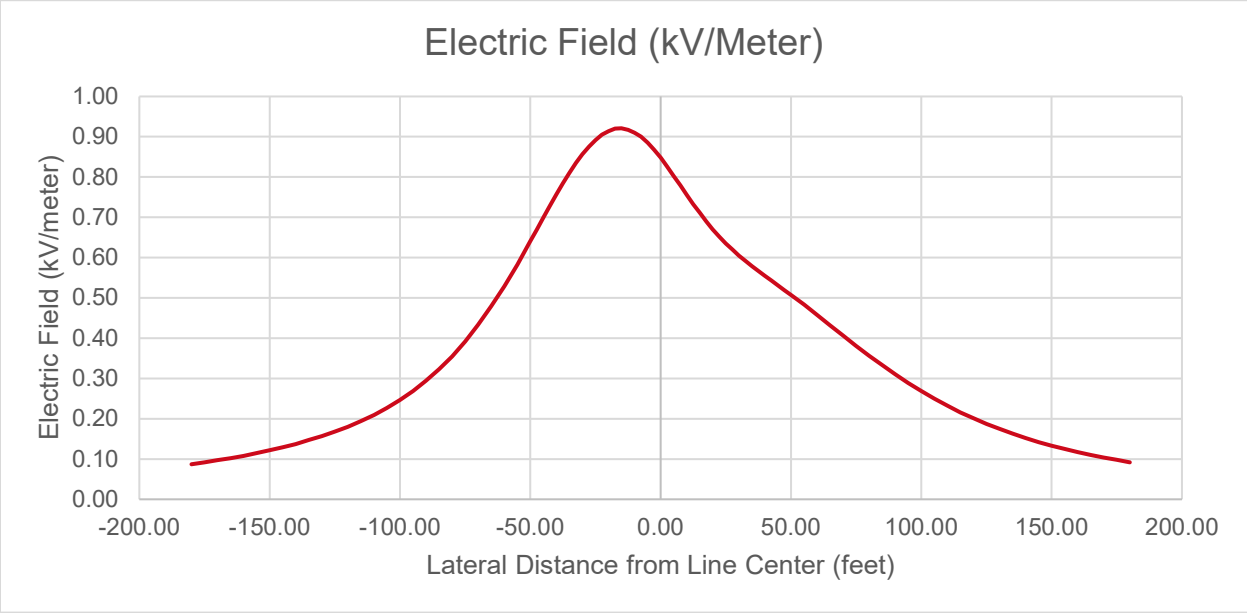

Figure 5. Electric Field Results

3.2 Magnetic Field

The magnetic field at the sensor height (2 meters) is displayed as a function of lateral distance from the center of the lines.

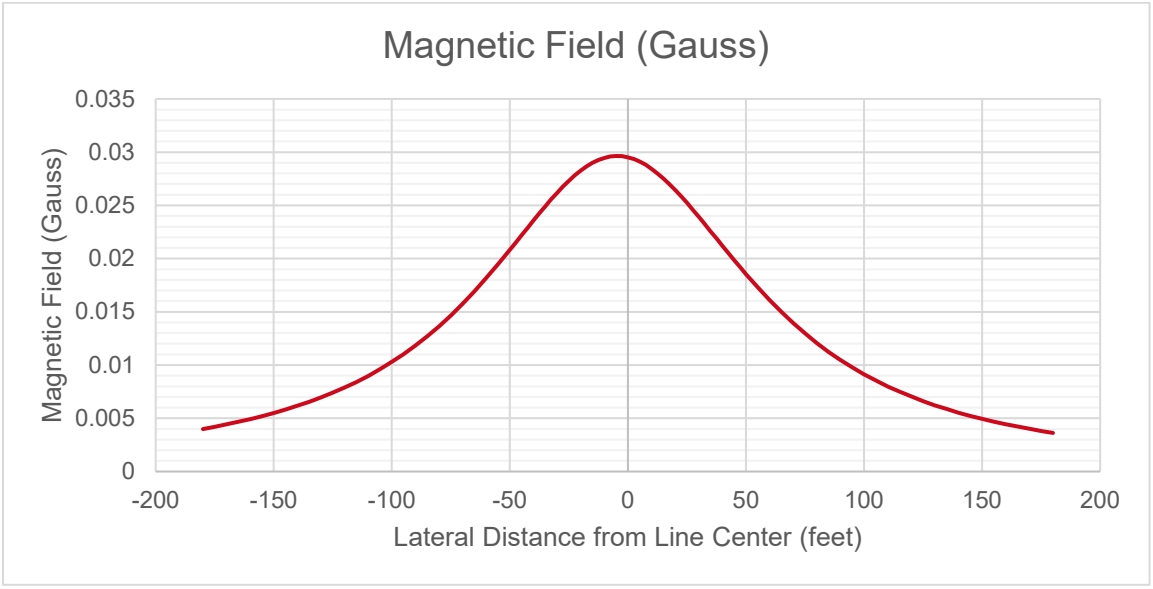

Figure 6. Magnetic Field Results

3.3 Audible Noise

The audible noise at the sensor height (2 meters) is displayed as a function of lateral distance from the center of the lines.

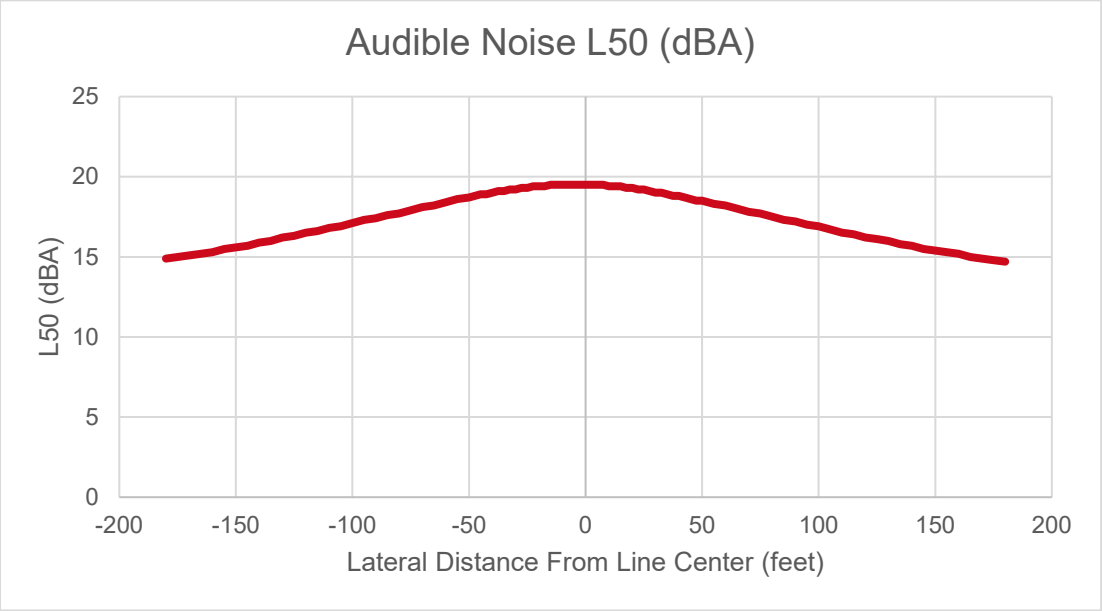

Figure 7. Audible Noise Results

3.4 Radio Interference

The Radio Interference at the sensor height (2 meters) is displayed as a function of lateral distance from the center of the lines.

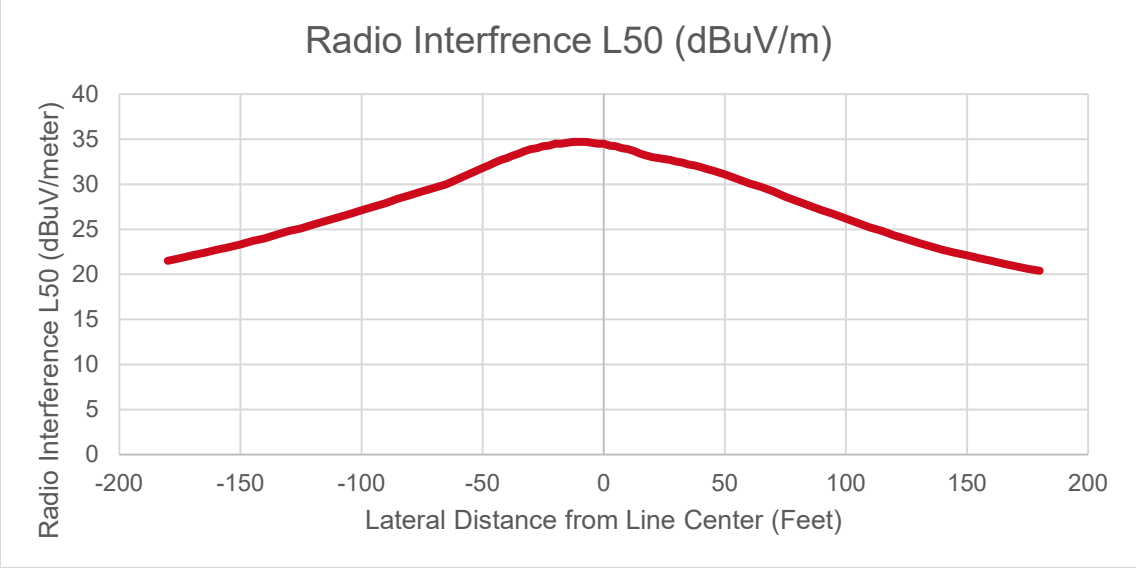

Figure 8. Radio Interference Results

3.5 Corona Loss

The conductor surface gradient and corona loss of the transmission line are calculated and summarized in Table 5.

Table 5. The Conductor Surface Gradient and Corona Loss

LINE PARAMETERS	VOLTAGE (KV)	MAXIMUM GRADIENT (KV/CM)	CORONA LOSSES (KW/MI)
Phase A	139.4	8.38	0.835
Phase B	139.4	8.36	0.824
Phase C	139.4	8.47	0.895

4 Conclusion

The results displayed in Section 3 of the report provide the electric field, magnetic field, audible noise, radio interference, and corona loss values at distances respective of the center of the line and 2 meters above the ground level. These results show that the limits described in Section 2.2 are not exceeded for the Marici Gen-Tie Line.

1. Introduction

The proposed project involves the construction and operation of an approximately 400-megawatt (MW) battery energy storage system (BESS). The proposed project would provide service to the City of Industry and reliability to the regional electric grid by receiving energy (charging) from the Southern California Edison (SCE) Walnut Substation, storing energy on-site, and then delivering energy (discharging) back to the SCE Substation, which is located at 16398 Gale Avenue in the City of Industry (adjacent to the Project Site's east property line) via an overhead tie-line.

In the past, BESS facilities primarily used lithium-ion battery packs, which were susceptible to thermal runaway reactions resulting in toxic air emissions, fires, and explosions. The proposed project would use lithium iron phosphate (LFP) battery packs, which have better thermal stability, longer lifespan, and less air toxic emissions compared to lithium-ion battery packs (i.e., nickel-manganese-cobalt [NMC] lithium-ion batteries) used at older BESS facilities.

This evaluation is intended to supplement the environmental analysis being conducted for the proposed project pursuant to the California Environmental Quality Act (CEQA). It focuses on the potential air emissions that could result in the event of a thermal runaway reaction and the impacts on the surrounding environment. The following reports were reviewed and included as part of the analysis and discussion contained herein:

1.1 PROJECT LOCATION

The 9.2-acre site (Project Site) is in the western end of the City of Industry, which is within Los Angeles County, California. The Project Site is generally bound by Gale Avenue to the south; Ward Way and warehouses and commercial properties to the west; Union Pacific Railroad (UPRR)/Metro rail lines and a rail yard to the north; and the Southern California Edison (SCE) Walnut Substation to the east. The Project Site has addresses of 16233, 16207, and 16253 Gale Avenue, and consists of five contiguous parcels (Assessor's Parcel Numbers 8242-016-033, -034, -036, -044, and -061).

The Project Site is surrounded by a mix of land uses, including industrial and warehouse uses to the north and west, the SCE Walnut Substation to the east, and residential uses to the south beyond Gale Avenue in the unincorporated Los Angeles County community of Hacienda Heights. The nearest sensitive receptors to the project are single-family residences approximately 85 feet south of the Project Site and approximately 110 feet south from the closest proposed battery enclosure.

2. BESS Evaluation

2.1 PROJECT DESCRIPTION

The selected battery cells and components for the proposed project are the Sungrow PowerTitan 2.0 (ST5015kWh-2H-US), which consist of containerized battery energy storage units. The BESS would be housed in 480 outdoor battery enclosures, each containing 48 battery modules consisting of 104 battery cells (i.e., 4,992 battery cells per enclosure). The battery enclosures are 8 ft long, 9.5 ft high, and 19.9 ft wide. The proposed container and battery cells are depicted in Figure 1.

Figure 1 – Sungrow PowerTitan 2.0 Components

Source: Hazard Dynamics 2025.

The PowerTitan 2.0 battery type are LFP cells. No toxic air contaminants (TACs) are emitted during normal operation of a BESS. However, there is the potential for TAC emissions to be released during a thermal runaway event if a fire occurs within a container due to battery malfunction, elevated temperatures, and battery combustion. The *Marici Plume Study* conducted by Hazard Dynamics included an evaluation of potential air toxics that could be released from a PowerTitan 2.0 in the scenario of a thermal runaway reaction that consumed all battery cells in a single enclosure (Hazard Dynamics 2025). This is considered a worst-case scenario as battery combustion testing shows that it is not likely for the runaway reaction to propagate between modules (Hazard Dynamics 2025). The results of the *Marici Plume Study* concluded that the concentrations of battery vent gas (such as carbon monoxide) would not result in a significant risk to off-site receptors for any modeled scenario (Hazard Dynamics 2025). The *Marici Plume Study* also conducted flammable gas modeling and found that the flammable region, defined as the lower flammable limit (LFL) was only present above the exhaust vents and the flammable footprint for the ½ LFL and the ¼ LFL extended a distance of only 1.4 meters from the exhaust vent.

2.2 LOS ANGELES COUNTY FIRE DEPARTMENT REQUIREMENTS FOR BESS

BESS facilities must meet the requirements of the National Fire Protection Association (NFPA), which issues standards for addressing energy storage systems (NFPA 2022). The proposed BESS battery enclosures would be equipped with fire monitoring systems, controls, and liquid cooling units to keep the batteries at optimal operating temperatures. The fire monitoring systems consist of smoke and heat sensors, gas detectors, alarms, remote monitoring, and an NFPA 69-compliant ventilation system to prevent an explosive atmosphere. The fire protection system would have an alarm that would trigger core power shutdown during a fire, smoke, overheating, overpressure, or other issues. Also, once the concentration of combustible gas reaches 10 percent LEL, the combustible gas detector will activate the exhaust system to turn on. The entire project power shutdown would occur automatically during electrical fault conditions (e.g., high-voltage, high-frequency, ground fault). In addition, the proposed BESS would be equipped with breakers that could be opened manually to power down different equipment at the proposed project.

LACoFD has experience in the permitting of BESS projects and will be responsible for plan checking and approvals. LACoFD has implemented additional permitting requirements to ensure fire safety related to the BESS, as follows:

- Fire Hydrants: Per LACoFD regulations, the project design must include internal hydrants at distances that will ensure a maximum hose pull of 150 feet. This is a shorter distance than is typical for a warehouse building and allows for faster response times for defensive firefighting.
- Training: The BESS facility will include one or two days of fire department training with a qualified fire and battery safety engineer.
- Hazard Mitigation Plan / Emergency Response Plan: The BESS facility will include a formal hazard mitigation analysis and site-level emergency response plan generated by a qualified fire safety engineer for the specific design of the project. This will be reviewed and approved by LACoFD during the building permit process.

» **Fire Suppression Systems:** Current standards require a dry standpipe connection to the BESS containers. A standpipe is a port in the BESS container that allows a fire hose to be connected to the container. With the provision of a dry standpipe, the local fire department can contain the fire by flooding the system with water, if determined to be the best firefighting option.
» **Installation:** Each module is tested at the manufacturer's facility and inspected for damage at the Project Site. Once installed and in operational mode, the battery management system (BMS) is calibrated for specific use at the site. The BMS protects the battery cells, modules, and racks from current, voltage and temperature design limit deviations by performing an emergency shutdown, when needed.

2.3 SUPPLEMENTAL EVALUATION

This evaluation is intended to supplement the results of the *Marici Plume Study* prepared for the Sungrow PowerTitan 2.0 battery modules and units. The *Marici Plume Study* evaluated the distance at which hazardous conditions would occur for incidents involving toxic gas plumes, flammable vapor clouds, fires, and the release of carbon monoxide. The study used a computer program called Fire Dynamics Simulator, which is a computational fluid dynamics (CFD) software developed for modeling fires and smoke plumes. The results determined that the potential toxic concentrations of carbon monoxide and flammable gas concentrations during a thermal runaway scenario would not extend beyond the boundaries of the Project Site and therefore would not impact off-site receptors (Hazard Dynamics 2025).

To supplement this information, PlaceWorks prepared additional air dispersion modeling and risk determinations for pollutants not evaluated in the *Marici Plume Study*. The smoke generated during a BESS fire may result in fine particulate matter ($PM_{2.5}$) emissions.

It has been previously reported that acidic gases, such as hydrogen fluoride, hydrogen cyanide, and hydrogen chloride, can be released during a thermal runaway event involving lithium-ion battery systems (Consolidated Edison 2017; Claasen 2024). However, the Sungrow PowerTitan 2.0 are LFP batteries, which are a newer battery technology than the nickel-manganese-cobalt (NMC) lithium-ion batteries that had been primarily used over the previous decade. The Sungrow PowerTitan 2.0 battery cells were laboratory-tested to determine the gas composition of the vent gases emitted during a combustion event (Hazard Dynamics 2025).

The only reported TAC emitted from the Sungrow PowerTitan 2.0 battery cells during thermal runaway testing was carbon monoxide (CO) (Hazard Dynamics 2025). Although other gases were released during the testing, such as carbon dioxide, hydrogen, methane, ethylene, ethane, and propane, these gases are not classified as TACs. They are primarily flammable gases and were evaluated further in the Hazard Dynamics report as part of the flammable plume modeling. Although the testing protocol did not specifically evaluate the presence of acidic gases, such as hydrofluoric acid (HF), hydrogen cyanide (HCN) or hydrogen chloride (HCl), studies conducted for similar LFP batteries did not detect these acidic gases during module level testing (Fisher 2023). The emission rate and chemical weight fraction in the cell vent gas for CO was determined from the *Marici Plume Study* (Hazard Dynamics 2025). The calculations are provided in Attachment A.

There is also the potential for hazardous $PM_{2.5}$ emissions (i.e., smoke) from an emergency fire scenario. For due diligence, $PM_{2.5}$ emissions were also evaluated from a potential thermal runaway reaction. The $PM_{2.5}$ emission factor was determined from lithium-ion batteries tested for thermal runaway reactions (Claasen 2024). The calculations are provided in Attachment A.

2.4 METHODOLOGY

The modeling evaluated TAC and $PM_{2.5}$ emissions from a thermal runaway event resulting from the failure and combustion of all 48 modules within a single battery enclosure and for a 4-hour release period. This is a more conservative assumption than was used in the *Marici Plume Study*, which assumed a fire duration of two hours. The Consolidated Edison study assumed a 30-minute release period to indicate how long a fire event would burn uncontrolled before first responders would arrive (Consolidated Edison 2017). As previously stated, the BESS would not emit TACs during normal operations and a full health risk assessment (HRA) is not required. However, as a precautionary measure, potential acute risks were determined for nearby sensitive receptors in the case of a battery cell malfunction and thermal runaway event.

The Consolidated Edison study also notes that the failure probability of multiple battery racks (or modules) from a thermal runaway event is low due to fire detection and venting systems and recommends limiting TAC emission estimates to the failure of 1.5 modules. Therefore, the use of a 4-hour release period and the involvement of all 48 modules is conservative. The emission rate calculations are provided in Attachment A.

Air dispersion modeling was performed using the AERMOD atmospheric dispersion model (Lakes AERMOD View, version 13.0). The model is a steady-state Gaussian plume model and is approved by South Coast Air Quality Management District (South Coast AQMD) for estimating ground-level impacts from point and fugitive sources in simple and complex terrain. The model's hour-of-day variable emissions option was invoked to predict ground-level concentrations for a 4-hour release. A unit emission rate of 1 gram per second (g/s) was used for modeling. The battery enclosures were modeled as point sources with the following parameters:

- Stack Release Height = Height of enclosure = 9.5 feet
- Effective Stack Diameter = 14.23 ft (rectangular area of battery enclosure roof, converted to an effective diameter)
- Stack Temperature = 240 Celsius (Fisher Engineering 2023)
- Flow Rate = 2.5 m/s (Tetra Tech 2023)

Two stacks were modeled, with one placed at the southwest corner of the Project Site and one placed at the southeast corner, nearest to the residential area to the south of the Project Site. A 25-meter by 25-meter receptor grid was used to determine potential impacts to residential receptors to the south. The results confirmed that the maximum exposed individual resident (MEIR) was located at a residence approximately 120 feet south of the Project Site.

Short-term (1-hour and 24-hour) ground-level concentrations were determined using AERMOD. The maximum AERMOD concentrations from the output files were then multiplied by the calculated pollutant emission rates to obtain the maximum ground-level concentrations at the MEIR. The AERMOD

model output is presented in Attachment B. The maximum ground-level concentrations at the MEIR are provided in Attachment A.

To determine the significance of air emissions, the 1-hour and 24-hour pollutant concentrations were compared to the Acute Emergency Guideline Levels (AEGLs) for CO. The United States Environmental Protection Agency (USEPA) promulgates AEGLs to be used by emergency planners and responders as guidance for accidental releases of chemicals into the air (USEPA 2024a). AEGLs represent threshold values for the general public and are determined for short exposure periods (e.g., 10 min, 30 min, 1 hour, 4 hours, 8 hours) and are presented in parts per millions (ppm) for 3 levels based on severity of the chemical in air:

» AEGL Level 1. This concentration level shows notable discomfort and irritation but is not disabling.
» AEGL Level 2. This concentration level shows irreversible or serious, long-lasting adverse health effects.
» AEGL Level 3. This concentration level shows life-threatening health effects or death.

Concentrations below AEGL-1 represent exposure levels that could produce mild and non-disabling irritation, or asymptomatic, non-sensory effects.

Potential hazardous $PM_{2.5}$ emissions would only occur for a limited period-of-time from an emergency event. Therefore, for $PM_{2.5}$, the 24-hour $PM_{2.5}$ ground-level concentrations were compared to the corresponding Air Quality Index (AQI) value.

2.5 RESULTS AND CONCLUSIONS

The results of the emergency air toxics evaluation are provided in Table 1, *Emergency Air Toxics Analysis Results – Maximum Exposed Individual Resident*. Based on the AERMOD receptor grid, the MEIR was determined to be a single-family residence approximately 120 feet south of the Project Site. As demonstrated in Table 1, the maximum 1-hour ground-level concentration for CO did not exceed the AEGL levels for any of the averaging times (i.e., 10 minutes to 8 hours). The maximum 24-hour $PM_{2.5}$ concentration was calculated to be 145 µg/m^3 at the MEIR. The resulting AQI for a concentration of 145 µg/m^3 would be 220, which is between 201 and 300, and the air would be categorized as very unhealthy (USEPA 2024b). For this AQI category, USEPA recommends that children, active adults, and people with respiratory diseases, such as asthma, should avoid outdoor exertion and all others should limit prolonged outdoor exertion.

The AQI is a measure of ambient outdoor air concentrations. Studies conducted during wildfire events in California with high $PM_{2.5}$ concentrations showed that indoor air concentrations were 73 percent lower than outdoor air concentrations due to measures taken to reduce infiltration, such as closing doors and windows, reducing ventilation, and active air filtration (Liang et al 2021). In the unlikely event of a thermal runaway, precautions should be taken to limit outdoor activities and stay inside.

TABLE 1 EMERGENCY AIR TOXICS ANALYSIS RESULTS – MAXIMUM EXPOSED INDIVIDUAL RESIDENT

Air Pollutant	Emission Rate for Enclosure (g/s)	1-Hour Ground-Level Concentration (ppm)	Threshold: 1-hr AEGL (ppm)	Exceeds Threshold?
Carbon Monoxide	269.0	7.2	AEGL-1: n/r AEGL-2: 83 AEGL-3: 330	No, it does not exceed AEGL-2 or 3 for any averaging time

Notes: n/r = not recommended due to insufficient data (USEPA 2024a).

It should also be noted that this evaluation is a worst-case emergency scenario. There are no reported failures that would cause thermal runaway to occur in all 4,992 cells that make up a battery enclosure (Hazard Dynamics 2025). Also, there have been no reported incidents for fires associated with Sungrow PowerTitan 2.0 battery enclosures (North American Clean Energy 2025; EPRI 2025). The PowerTitan 2.0 also uses a closed-loop liquid cooling system to maintain optimal operating temperatures. Impacts associated with $PM_{2.5}$ emissions resulting from smoke would be transient in nature and not likely to last more than 24 hours.

3. Conclusions

In summary, PlaceWorks conducted a supplementary evaluation of air toxics and fine particulate matter ($PM_{2.5}$) emissions from a worst-case thermal runway scenario associated with the proposed BESS facility. The results indicate that the BESS facility would not expose nearby sensitive receptors (i.e., residents) nor adjacent industrial land uses to TAC concentrations in the event of a thermal runaway event and impacts are considered less than significant.

However, there is potential for nearby sensitive receptors and adjacent industrial land uses to be exposed to hazardous $PM_{2.5}$ emissions for this emergency scenario. Short-term smoke emissions in the

immediate vicinity of a potential fire are predicted to result in an AQI between 201 and 300. USEPA's main recommendation for very unhealthy hazardous smoke events is to avoid or limit outdoor activities. Additionally, the Project Site is within 0.15-mile of LACoFD Station No. 43, which would ensure a prompt response in the event of a fire at the Project Site.

In recent years, public concern for BESS facilities has increased due to catastrophic fires such as the Moss Landing, CA BESS fire in January 2025. However, it should be noted that the Moss Landing BESS differs from the proposed project in several ways. First, the Moss Landing BESS placed large numbers of battery racks in a single enclosed indoor space, which is conducive to the rapid spread of flames (Battery Technology 2025). Second, the Moss Landing BESS used the older NMC lithium-ion cells, which have a higher risk of overheating and combustion when compared to LFP cells. LACoFD's recent expanded requirements for BESS facilities have reduced the likelihood of thermal runaway and fire scenarios. Finally, each Sungrow PowerTitan 2.0 battery enclosure includes a liquid coolant system which provides superior temperature control and extended battery life as compared to air cooled systems. Each enclosure also contains a ventilation system to exhaust vent gases in case of cell failure, heat and smoke detectors, and flammable gas detectors. The battery enclosures will be located outdoors and properly spaced to reduce the potential for thermal runaway scenarios by dissipating any generated heat. Therefore, the design of the proposed project would result in a reduction in the potential for fire propagation as compared to older BESS facilities.

Respectfully submitted,

PlaceWorks

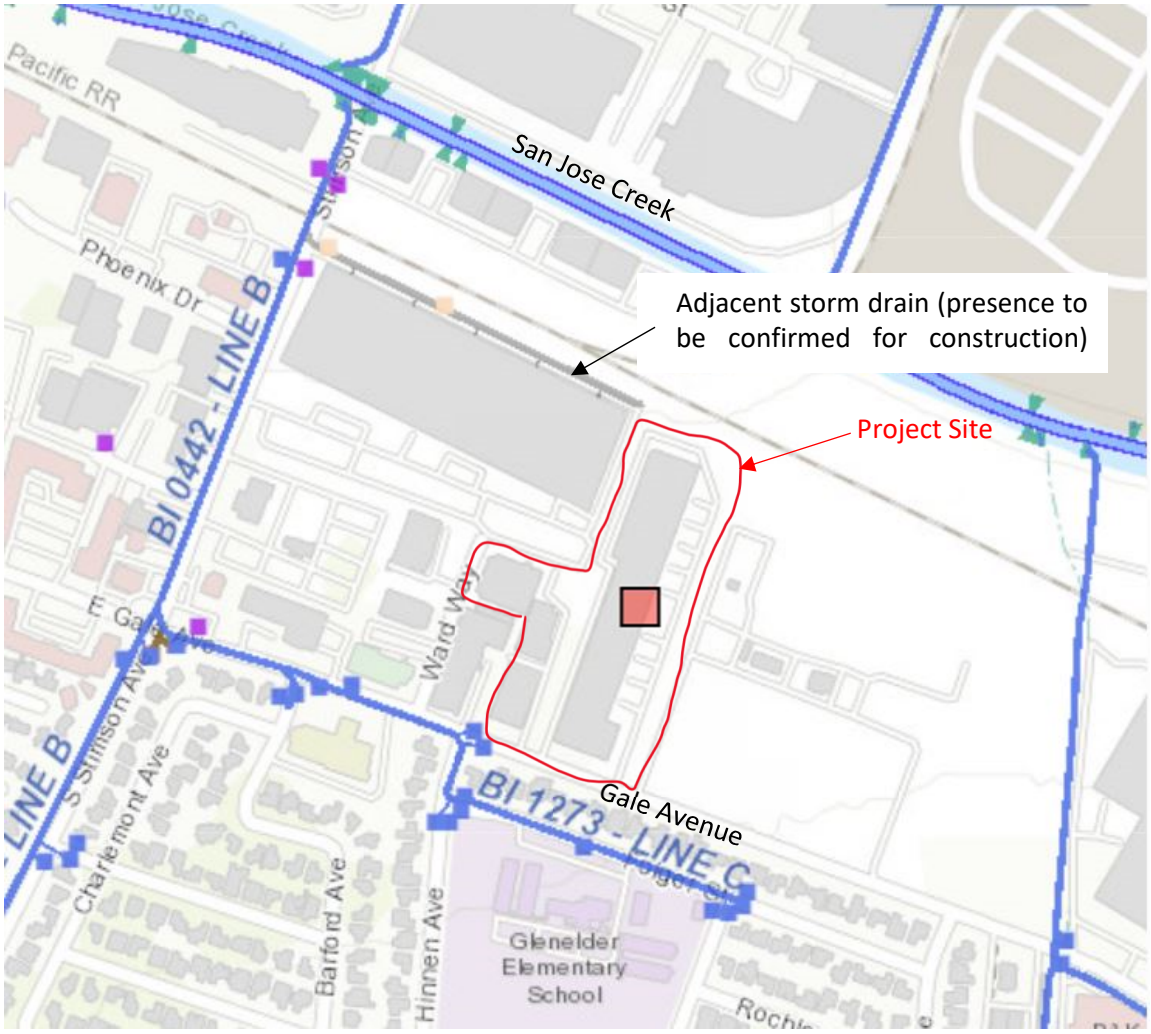
1.0 Project Description

Five (5) Parcels will be merged into one and contain a Battery Energy Storage System (BESS) after redevelopment. These parcels (APNs 8242-016-061, 8242-016-033, 8242-016-034, 8242-016-036 and 8242-016-044) total approximately 9.21 acres. The merged lot will have batteries, control equipment, and ancillary facilities. Batteries will be contained in purpose-built free-standing enclosures. Ancillary facilities include access roads designed to fire department standards, fire water system, exterior lighting, inverters, transformers, an onsite electric substation, stormwater conveyance systems (discussed later in this report), a building with work stations, break area, sanitary facilities and a perimeter reinforced concrete wall around the entire facility designed for safety and aesthetics of the surrounding area. The onsite substation will be connected to the adjacent Southern California Edison walnut substation by an overhead 220 kv electric line.

The Site is located at 16207, 16233 and 16285 Gale Avenue, Industry, California, within the San Gabirel Watershed in Los Angelas (LA) County.

The purpose of this report is to provide a preliminary stormwater analysis of this redevelopment and to ensure it complies with stormwater requirements set forth by the City of Industry and LA county.

1.1 Proposed Stormwater Conditions



The proposed stormwater design consists of an underground storm drain system, curb and gutters and open vegetated ditches. The proposed storm drain will connect to an existing curb inlet that is to remain on the property. Calculations shown herein will prove there is no increase of stormwater runoff to this existing inlet and anywhere else on site after development.

2.0 Existing Site Conditions

The five existing parcels contain a few different commercial stores, services and storage buildings. The parcels are almost entirely covered by impervious cover (pavement, buildings and loading docks). Total existing impervious cover is approximately 8.43 acres, which makes up approximately 92% of the total merged lot (Site). FEMA flood zone mapping shows the Site lies in a minimal flood hazard area (Zone X) as shown in **Appendix A**.

Stormwater on these parcels make their way to an existing underground system by means of sheet flow, roof drains, gutters and into grate and curb inlets. A small area discharges to the underground system along Gale Ave, while most of the area is conveyed through an independent stormwater system. It is assumed for this report, the independent system connects to an adjacent storm drain. It is clear both systems eventually make their way to San Jose Creek, a concrete lined channel approximately 1300 ft northwest of the Sites northwest lot corner. **Figure 1** below depicts the existing storm drain system along Gale Ave that leads into San Jose Creek. The Image was captured from the LA county public works website. This report analyzes four (4) discharge points; Discharge (DP) A, DP B, DP C and DP G. The discharge points, existing surface flow and drainage areas are depicted in the Existing Drainage Area Map found in **Appendix B.**

Figure 1 – Public Works LA County Storm Drain System

3.0 Stormwater Calculations

The project will develop a total of 3.89 acres (42%) of impervious surface on approximately 9.21 acre site. This 3.89 acres make up the asphalt access roads, concrete curb and gutters, substation area, buildings, storage units as well as concrete pads and foundations for equipment.

3.1 Methodology

The modified rational method (MODRAT) was used to calculate existing and proposed development runoff. Proposed equations for this method can be found in Chapter 6.3 and 7.3 of the *Hydrology Manual.*

3.2 Soil Characteristics and Design Rainfall

The soil types in the proposed site are 017 and 003 based on USGS Quadrangle as shown in the index Isohyetal Map in **Appendix D**. From this map, 6.36 inches was used for the 50-year 24-hour storm analysis. For the 100-year 24-hour storm, 6.86 inches was used, and was taken from NOAA Atlas 14, Volume 6 Version 2.

3.3 Runoff Coefficient and Time of Concentration

Although only 42% of the BESS site is impervious, 91% impervious was used to find the Developed Runoff Coefficient (C_D) in equation 6.3.2 of the *Hydrology Manual.* This 91% is based on a mixed commercial and industrial land use type per the table in Appendix D in the *Hydrology Manual*. This is a conservative approach to the stormwater design and is appropriate for this design stage. The steps outlined in section 7.3 of the *Hydrology Manual* were followed to find the Time of Concentration for each drainage area. **Appendix E** shows these results, along with the runoff coefficient curves for each soil type. Where times of concentration were below 5 minutes, 5 minutes was used per section 11.1 of the *Hydrology Manual.*

3.4 Results

Both existing and proposed development for the 50-year, 24-hour storm event is calculated to compare the discharge rates before and after. The results are summarized below in **Table 1**. The drainage areas that correspond to these flow rates are shown in **Appendix B and C.**

Table 1 – 50-year Peak Flow Summary

Discharge Point	Existing Flow (cfs)	Proposed Flow (cfs)	Difference (cfs)
A	**21.15**	**21.11**	**-0.04**
B	**0.24**	**0.24**	**0.00**
C1	**5.43**	**0.00**	**-5.43**
C2	**13.32**	**11.59**	**-1.73**
G	**0.69**	**0.69**	**0.00**

3.4.1 Underground Stormwater System

The rational method, along with Manning's equation was used to calculate the flows, velocities, and other hydraulic information for the underground storm drain system. In order to size the inlets and underground storm drain, the 100-year, 24-hour storm was used. The results for the 100-year peak flow rates are summarized below in **Table 2**. Note the proposed flow rate for discharge point A comes from **Appendix G**, column 15, at the end of Storm line A1.

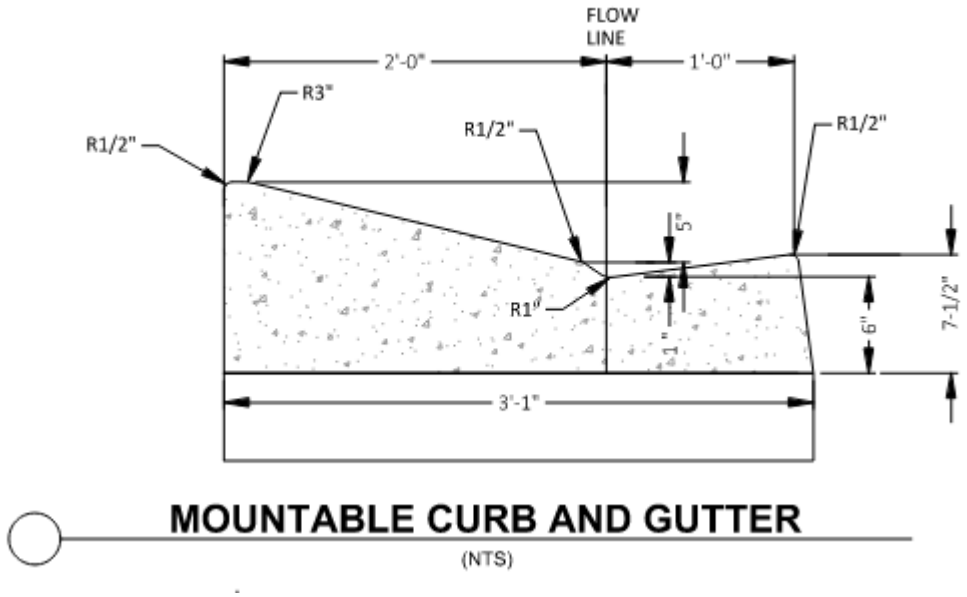


Table 2 –100-year Peak Flow Summary

Discharge Point	Existing Flow (cfs)	Proposed Flow (cfs)	Difference (cfs)
A	27.72	21.55	-6.17
B	0.26	0.26	0.00
C1	1.07	0.00	-1.07
C2	14.41	12.58	-1.83
G	0.75	0.75	0.00

3.4.2 Inlet sizing

Inlet sizing is based on multiple parameters, including gutter type, curb type, road slope and spread of water (T) in the road. FlowMaster version 10.03.00.03 was used to find the depth of water and spread within the road at each inlet location. This Site utilizes mountable curb and gutter. **Figure 2** shows a detail of the curb type**. Appendix F** shows the flow to the inlets, size and type of inlet at each location as well as the worksheets printed from FlowMaster.

Figure 2 – Mountable Curb and Gutter

3.5 Stormwater Quality

Stormwater Quality will be met for drainage area A by installing a proprietary stormwater quality device. This device shall be selected and sized prior to construction plans. The device will be located on the northwest corner of the Site along the storm drain line that discharges to the existing storm drain system. Once the device is selected and sized, per LID Manual is must be approved by LA County Department of Public Works. Drainage areas C, G and B that do not flow through this device will flow through vegetated swales and/or strips prior to discharging to the adjacent property or the Gale Avenue existing storm drain system. The stormwater quality design volume is based on the 85th percentile, 24-hour rainfall depth of 1.10 inches. **See Appendix H** for the Isohyetal Map and peak flow rates for the 85th percentile storm.

4.0 Conclusions

The Marici Project does not increase the stormwater runoff from its Site. Proposed flow rates are either at or below existing conditions. The impervious cover has decreased from 8.43 acres in its current existing conditions to 3.89 acres in the proposed condition. The increase in times of concentration as well as the cover type, allow the Site to have at or below existing peak flow rates.

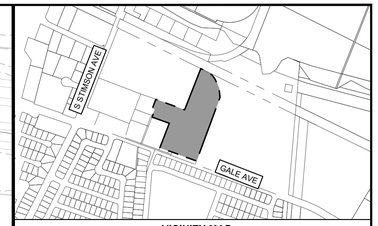
N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards



The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 5/30/2024 at 3:15 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

1.0 Introduction

TRC Solutions, Inc. (TRC) is pleased to provide this noise report to support Marici Project, LLC in obtaining needed discretionary permits for the Marici Project in the City of Industry, California. The project is a proposed battery energy storage system (BESS) to be developed on 5 parcels comprising approximately 9.2 acres (the Site). The Site is currently developed with commercial buildings, parking, and associated landscaping. The proposed facility also includes a 220 kV tie-line across the eastern boundary of the Site into the adjacent Walnut Substation.

2.0 Concepts of Environmental Sound

Sounds are generated by a variety of sources (e.g., a musical instrument, a voice speaking, or an airplane that passes overhead). Energy is required to produce sound and this sound energy is transmitted through the air in the form of sound waves – tiny, quick oscillations of pressure just above and just below atmospheric pressure. These oscillations, or sound pressures, impinge on the ear, creating the sound we hear. The range of sound pressures that can be detected by a person with normal hearing is very wide, ranging from about 20 micro-pascals (μPa) for very faint sounds at the threshold of hearing to nearly 10 million μPa for extremely loud sounds, such as a jet during take-off at a distance of 300 feet. Because the range of human hearing is so wide, sound levels are reported using "sound pressure levels", which are expressed in terms of decibels. The sound pressure level in decibels is the logarithm of the ratio of the sound pressure of the source to the reference sound pressure of 20 μPa, multiplied by 20.

Table 2.1 provides some examples of common sources of sound and their sound pressure levels. All sound levels in this assessment are provided in A-weighted decibels, abbreviated "dB(A)" or "dBA." The A-weighted sound level reflects how the human ear responds to sound, by deemphasizing sounds that occur in frequencies at which the human ear is least sensitive to sound (at frequencies below about 100 hertz and above 10,000 hertz) and emphasizing sounds that occur in frequencies at which the human ear is most sensitive to sound (in the mid-frequency range from about 200 to 8,000 hertz). In the context of environmental sound, noise is defined as "unwanted sound."

Table 2.1 Examples of Common Sound Pressure Levels

Sound Level dB(A)	Common Indoor Sounds	Common Outdoor Sounds
110	Rock Band	Jet Takeoff at 1000 feet
100	Inside NYC Subway Train	Chain Saw at 3 feet
90	Food Blender at 3 feet	Impact Hammer (Hoe Ram) at 50 feet
80	Garbage Disposal at 3 feet	Diesel Truck at 50 feet
70	Vacuum Cleaner at 10 feet	Lawn Mower at 100 feet
60	Normal Speech at 3 feet	Auto (40 mph) at 100 feet
50	Dishwasher in Next Room	Busy Suburban Area at night
40	Empty Conference Room	Quiet Suburban Area at night
25	Empty Concert Hall	Rural Area at night

Sound pressure levels are typically presented in community noise assessments utilizing the noise metrics described below and expressed in terms of A-weighted decibels.

- "L_{10}" is the sound level that is exceeded for 10 percent of the time. This metric is a measure of the intrusiveness of relatively short-duration noise events that occurred during the measurement period.
- "L_{50}" is the sound level that is exceeded for 50 percent of the measurement period.
- "L_{90}" is the sound level that is exceeded for 90 percent of the time and is a measure of the background or residual sound levels in the absence of recurring noise events.
- "L_{eq}" is the constant sound level which would contain the same acoustic energy as the varying sound levels during the time period and is representative of the average noise exposure level for that time period.
- "L_{MAX}" is the instantaneous maximum sound level for the time period.

It is often necessary to combine the sound pressure levels from one or more sources. Because decibels are logarithmic quantities, it is not possible to simply add the values of the sound pressure levels together. For example, if two sound sources each produce 70 dB and they are operated together, their combined impact is 73 dB – not 140 dB as might be expected. Four equal 70 dB sources operating simultaneously result in a total sound pressure level of 76 dB. In fact, for every doubling of the number of equal sources, the sound pressure level goes up another three decibels. A tenfold increase in the number of sources makes the sound pressure level increase by 10 dB, while a hundredfold increase makes the level increase by 20 dB. The logarithmic combination of *n* different sound levels is calculated by the following equation:

$$L_{total}=10*\log_{10}\left(10^{\frac{L_1}{10}} + 10^{\frac{L_2}{10}} +\ldots+10^{\frac{L_n}{10}}\right)$$

Perceived changes in sound level can be slightly more subjective; the average person will not notice a change of 1-2 dB, a 3 dB increase is just barely perceptible, while a 5 dB change is clearly noticeable.

3.0 Applicable Noise Standards and Regulations

There are no regulations for the City of Industry or the state of California that set quantitative standards for noise levels that would be applicable to the Project. The California Environmental Quality Act (CEQA), Appendix G, requires environmental impact assessments to determine whether projects would result in:

- Increase in ambient noise levels in excess of local applicable standards;
- Excessive ground-borne vibration or ground-borne noise levels; or
- Exposure of people residing or working in the project area to excessive noise levels (for a project within 2 miles of an airport).

The City of Industry falls within Los Angeles County, which has an ordinance regarding noise levels at new developments. Ordinance 12.08, Noise Control, includes designated noise zones based on sensitivity of the receiving property. The most sensitive applicable noise zone that could be affected by the Project is Noise Zone II, residential properties, which has an exterior noise level limit of 45 dB at night (10 p.m. to 7 a.m.) and 50 dB during the day (7 a.m. to 10 p.m.). If the

measured ambient L50 sound level exceeds this level, then the measured ambient L50 sound level becomes the noise level standard. More lenient (higher) noise level standards are provided in 12.08.390 Section B for shorter cumulative durations within a given hour. Since sound levels from the Project are assumed to be continuous, these would not apply to the Project.

Ordinance 12.08.440, Construction Noise, sets limitations for mobile construction equipment at single-family residential structures of 75 dBA between 7 a.m. and 8 p.m., and 60 dBA between 8 p.m. and 7 a.m. The daytime and nighttime limits at semi-residential/commercial receiving properties are 85 dBA and 70 dBA, respectively.

Based on desktop review of the proposed BESS site and surrounding area, the nearest areas that could be considered areas of sensitive land use are the residential areas immediately south of the Site along Gale Avenue and Folger Street (see Section 4.0, Noise Sensitive Areas). The land uses to the north, east, and west are predominantly industrial and commercial and are not considered areas of sensitive land use.

Ordinance 12.08.560, Vibration, prohibits operating or permitting the operation of any device that creates vibration above the vibration perception threshold (0.01 in/sec) beyond the property boundary of the source if on private property, or at 150 feet (46 meters) from the source if on a public space or public right-of-way.

4.0 Noise Sensitive Areas

The facility is being proposed on an industrial property with the only noise sensitive areas (NSAs) being the single-family residential properties on the south side of Gale Avenue to the south of the Site in Hacienda Heights. Table 4.1 lists the closest NSAs and their approximate distance and direction from the proposed facility.

Table 4.1 Closest Noise Sensitive Residences

5.0 Long-Term Ambient Sound Survey

A long-term pre-construction ambient sound survey was conducted at the Project site from August 20th to August 25th, 2025, to characterize the existing sound environment (i.e., background) in the Project area. The methodology and results of the survey are further described below.

Continuous sound level measurements were taken near the property line within the proposed site at location LT-1 (see Figure 1). The measurements were taken using a Larson Davis SoundExpert® LxT sound level meter that meets the requirements of the American National Standards Institute (ANSI) Standards for Type I instruments. The sound level meter was calibrated before and after each monitoring period using a CAL200 acoustic calibrator. The microphone was positioned according to the ANSI Standard on a tripod 1.5 meters above ground, 7.5 meters from large reflecting surfaces, and at least 1.5 meters from tall trees.

The results of the baseline measurements collected at the Project site are summarized in Table 5.1 below. The overall background level, typically represented by the L_{90} metric, was 48.6 dBA.

Table 5.1 Ambient Sound Survey Summary

Sound Metric	Sound Level (dBA)
LAeq	68.0
LCeq	74.1
LAS_{MAX}	103.8
LAS_{MIN}	39.0
LA_5	73.2
LA_{10}	72.0
LA_{50}	64.9
LA_{90}	**48.6**

6.0 Construction Noise Modeling

Short-term, localized increases in sound levels are likely to occur during construction. Standard construction equipment will be used in the construction of the facility. To be conservative in the construction noise calculations, all Project construction equipment was included in the noise model as operating at the same time. The highest sound levels during construction are expected during the early earthmoving phase. Based on the Project equipment usage predictions, a sound level calculation was performed using the Federal Highway Administration's Roadway Construction Noise Model version 1.1 (FHWA, 2006).

Table 6.1 lists the equipment that will be used during each phase of construction based on preliminary design and schedules.

Table 6.1 Construction Equipment and Phases

Table 6.2 summarizes the results of the construction noise modeling for all the nearby NSAs using the loudest construction phase. For construction noise modeling purposes, all equipment listed for each phase is assumed to be operating simultaneously at the nearest possible site location to each receptor group.

Table 6.2 Sound Level Increases During Construction

NSA Group	NSA	Measured Ambient Sound Level (L_{90})	Max. Predicted Sound Level, Single Daytime Shift (dBA)	Combined Sound Level (dBA)
Group 1	1	48.6	79.4	79.4
Group 2	2	48.6	84.1	84.1
Group 3	3, 4, 13	48.6	86.9	86.9
Group 4	5, 14, 15	48.6	89.2	89.2
Group 5	6, 7, 8, 9, 10, 11, 12	48.6	91.7	91.7

**NSAs are grouped based on the similarity of their distances to the Project Site.*

Table 6.3 lists the predicted construction sound levels for each phase at each NSA group. The highest modeled impacts occur during the equipment installation phase. The maximum impact is below the 75 dBA daytime residential threshold established by Los Angeles County Code during the majority of construction.

Table 6.3 Construction Sound Levels

Construction Phase	Schedule	Sound Level (L_{EQ}) at NSA Group				
		Group 1	Group 2	Group 3	Group 4	Group 5
Demolition Phase 1	Month 1	60.6	65.3	68.2	70.4	72.9
Demolition Phase 2	Month 2	61.7	66.5	69.3	71.6	74.1
Demolition Phase 3	Month 3	61.7	66.5	69.3	71.6	74.1

Pave/Surface/Landscape	Month 12	57.3	62.0	64.8	67.1	69.6

As shown above, the RCNM model predicts that there will be moderate temporary increases in sound levels at the closest nearby NSAs during Project construction activities, the most significant being at NSAs 6-12, which are directly south of the site. To ensure compliance with county ordinance thresholds, temporary mitigation measures such as noise fencing, enclosures, or barriers around specific equipment or along the property boundary may be used.

The vibration impacts during construction are assumed to be minor based on the preliminary list of construction equipment. No rock blasting is anticipated, and all equipment that will have the potential to generate groundborne vibration, such as trucks and tracked construction vehicles, will be mobile/transient and used over short durations. Equipment will likely be used within the interior of the site rather than along the property line on a frequent basis. Traffic along Gale Avenue and railroad activity in the vicinity may have more significant vibration impact than construction equipment. Therefore, vibration impacts during construction are expected to be minimal.

The FTA Transit Noise and Vibration Impact Assessment Manual provides methodology and vibration reference levels for certain equipment. At the 150-foot distance specified by the Los Angeles county ordinance, the highest estimated vibration levels during construction is 0.006 in/sec, based on a large bulldozer with a reference PPV of 0.089 in/sec at 25 feet (FTA 2018). This level is below the 0.01 in/sec threshold established by the ordinance.

7.0 Predictive Modeling of Sound Impacts During Operation

This section describes the methods, assumptions, and results of the Cadna-A® noise modeling used to predict future sound levels resulting from the operation of the proposed BESS containers and associated equipment at the property line.

7.1 Noise Model

The Cadna-A® computer noise model was used to predict future sound pressure levels from the operation of the proposed BESS at the property line and at the nearest noise-sensitive areas. An industry standard, Cadna-A® was developed by DataKustik GmbH to provide an estimate of sound levels at distances from specific noise sources. This model takes into account:

- Sound power levels from stationary and mobile sources;
- The effects of terrain features including relative elevations of noise sources;
- Intervening objects including buildings and sound barrier walls; and
- Ground effects due to areas of pavement and unpaved ground.

Cadna-A® accounts for shielding and reflections due to intervening buildings or other structures in the propagation path, as well as diffracted paths around and over structures, which tend to reduce computed noise levels. The shielding effects due to intervening terrain are included in the model. The shielding effects due to existing off-site buildings and ground vegetation were excluded from the model to provide a level of conservatism to the analysis.

For ground effects, the reflectivity of the surface is described by a “ground factor” variable (G), which ranges from 0 for ‘hard’ ground (paved surfaces, concrete, etc.) and 1 for “porous” ground (grassland and other vegetated areas). The model used a “hard” ground absorption factor (G) of 0 to represent the proposed paved conditions.

The International Standards Organization current standard for outdoor sound propagation (ISO 9613 Part 2 – “Attenuation of sound during propagation outdoors”) was used within Cadna-A®. This standard provides a method for calculating environmental noise in communities from a

variety of sources with known emission levels. The method contained within the standard calculates the attenuation over the entire sound path under weather conditions that are favorable for sound propagation, such as for downwind propagation or "under a well-developed moderate ground-based temperature inversion." Application of conditions that are favorable for sound propagation yields conservative estimates of operational noise levels in the surrounding area.

7.1.1 Modeling Inputs

The primary noise-producing sources on the site during Project operation will be the BESS containers and medium-voltage transformers, as well as two substation step-up transformers. A total of 480 BESS containers and 120 transformers are proposed throughout the site. Two additional 34.5/220 kV station service transformers will be located within the substation in the southeast portion of the site. The location of these sources is shown on Figure 1.

The source model inputs and locations were based on proposed electrical equipment specifications in design drawings by TRC dated February 5, 2025. The sound power level for the proposed battery containers, the Sungrow PowerTitan 2.0, is 75 dBA according to manufacturer specifications. The sound level for the transformer units, the Sungrow MVS5000-LV-US, is not listed in manufacturer specifications, so the modeled sound levels are based on a generic 5,140 kVA, 2-winding, KNAN transformer.

Sound impacts associated with the Project interconnection at the adjacent Walnut Substation were also considered. None of the Project interconnection infrastructure to be installed within the Walnut Substation will be a material source of noise. Sound levels associated with transmission electrostatic effects (also known as "corona" effects) occur during precipitation events or very high humidity and generally are only discernable during very high humidity because the corona effect noise can be masked by the rainfall itself. Since corona effect noise is substantially quieter than the onsite Project noise sources and is dependent on humid conditions that are not typical of the area, corona noise from the short electric tie-line is not expected to be routinely discernable.

Since the sound-producing equipment were assumed to be continuously operating, the L_{90} (background level) and L_{EQ} (equivalent constant level) of the proposed equipment are the same for the purposes of this assessment.

Table 7.1 Noise Source Inputs to the Cadna-A Model

Name	Source Height*	Octave Band Sound Power Levels (dB)									Total (dBA)
		31.5	63	125	250	500	1000	2000	4000	8000	
Transformers (120)	1.2m	69	71	72	72	75	68	71	70	66	77
Substation Transformer (2)	1.2m	64	56	66	68	59	52	39	30	25	62
Battery Containers (480)	1.4m	72	67	67	75	74	69	67	63	64	75

** Heights based on component dimensions and mounting orientation, assumed pad-mounted equipment. Source levels are extrapolated from manufacturer-provided or generic sound pressure level specifications.*

The conceptual site layout and existing topography was used to create a terrain model that represents the topography during operation of the proposed facility. Figure 1 shows the proposed topography within the site and adjacent Walnut Substation based on TRC's proposed drainage and grading plan. The inputs to the model are 1-meter contours, based on USGS 3DEP topographic data. A 10-foot-high concrete masonry unit perimeter wall was also included in the

model as shown in Figure 1. The model assumed continuous and simultaneous operation of all sound-producing equipment. This was a conservative assumption, since not all equipment will be operating continuously at full load. A search radius of 1 kilometer from each receptor was used in the model to ensure that all noise sources contributing to the predicted facility noise level were modeled at every noise-sensitive receptor.

7.1.2 Sound Model Results

Cadna-A® allows the user to place receptors at selected locations and predicts sound levels at those specific receptor locations. For this analysis, specific receptors were placed at the closest exterior walls of the nearest residential receptors, listed in Table 4.1 above. The model also calculated sound levels for the surrounding area, using a 10-foot receptor grid, with a receptor height of 5.1 feet (representative of average ear height). This data is displayed in the isopleths on Figure 2, which show lines of equal sound level at the site and the surrounding area.

Table 7.2 below lists the steady-state, A-weighted sound level results at each modeled receptor, along with the calculated increase over the ambient sound level (assumed to be the measured LA_{90} value).

Table 7.2 Modeled Sound Level Results

Site ID	Description	Sound Level (dBA)			
		Modeled	Ambient	Combined	Increase
NSA 01	Residence	36.6	48.6	48.9	0.3
NSA 02	Residence	39.1	48.6	49.1	0.5
NSA 03	Residence	41.1	48.6	49.3	0.7
NSA 04	Residence	40.9	48.6	49.3	0.7

NSA 14	Residence	38.3	48.6	49.0	0.4
NSA 15	Residence	37.9	48.6	49.0	0.4

8.0 Conclusion

Construction will generally occur during weekdays and daytime hours between 7 a.m. and 7 p.m., as stated in the Los Angeles County Code 12.08.440 Construction Noise, which will significantly

mitigate construction noise impacts to abutters. Contractors will be required to utilize sound control devices no less effective than those provided by the manufacturer and maintain equipment in accordance with manufacturer's recommendations. No equipment will have unmuffled exhausts and equipment idling will be kept to a minimum. Modeled sound and vibration levels during construction are below the thresholds established by Los Angeles County noise ordinance and are not expected to require additional mitigation.

During Project operation, the maximum predicted sound level from the proposed facility at nearby potential noise-sensitive locations is 44.1 dBA at location NSA 07. The model assumes all sound sources are in continuous operation, so the L_{EQ} over any duration would be the same. Based on the measured baseline (L_{90}) sound level of 48.6 dBA, this represents just a 1.3 dBA increase, which is not likely to be perceptible to the human ear. Increases in sound levels caused by the adjacent Walnut Substation would be limited to corona effects during high humidity or precipitation events and would be negligible in terms of overall sound impact.

Based on this assessment, the Project will not result in generation of a substantial temporary or permanent increase in ambient noise levels in excess of applicable noise ordinances. Nearest residences are approximately 100 feet from the closest grading and heavy construction and ground vibration will attenuate to a low level within that distance. The Project is not located within the vicinity of a private airstrip or an airport land use plan or within two miles of a public airport, so the Project will not expose people to excessive airport-related noise.

FEHR PEERS

Memorandum

Date: May 16, 2025

To: Joseph L. Stenger, P.G.

From: Jolene Hayes
Logan Aspeitia
Jerry Hsu

Subject: City of Industry Battery Storage Facility Transportation Study

LA24-3574

Fehr & Peers has completed a Transportation Study for the Battery Storage Facility (Project) in the City of Industry, California. The study consists of Level-of-Service (LOS) and Vehicle Miles Traveled (VMT) screening assessments, which conclude the Project does not exceed the City's thresholds and thereby, the Project does not require further transportation impact analysis and would result in a **less-than-significant impact** under the California Environmental Quality Act (CEQA) for transportation. Additionally, the study analyzed how construction traffic associated with the Project would affect the surrounding transportation network and found that the Project would generate less daily trips than the existing uses. The methodologies and procedures used in this study are consistent with the *City of Industry Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (2020).*

Project Description

The Project site is bounded by Ward Way to the west, the Southern California Edison (SCE) Walnut Substation to the east, Gale Avenue to the south, and Ardmore Home Design/a rail-line to the north. It is currently developed with 162,000 square feet of industrial land uses, which the Project plans to demolish and replace with a battery storage facility. The Project is anticipated to have up to two employees on-site daily. The Project includes an overhead electric tie-line that will cross the east property boundary directly into the adjacent Walnut Substation where it will interconnect with the grid.

Need for LOS Assessment

As previously stated, the Project is anticipated to have up to two employees on-site daily. Therefore, it is anticipated to generate negligible daily trips.

Per the City's guidelines, the Project is not required to complete a LOS analysis as it does not meet any of the following criteria:

- When either the AM or PM peak hour trip generation is expected to exceed 200 vehicle trips from the proposed development.
- Projects that will add 100 or more trips during either the AM or PM peak hours to any intersection.

VMT Screening

Due to the implementation of California Senate Bill (SB) 743, VMT is utilized as the metric to determine transportation-related impacts. The City's guidelines identify the following three types of screening that may be used to screen projects from project-level VMT assessment:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

The Project Type Screening criteria allows projects that generate less than 110 daily vehicle trips to be screened from further VMT assessment. The Project would have up to two employees on site and thus generate less than 110 daily trips, therefore, the Project screens out from further VMT analysis pursuant to the Project Type Screening criteria and is assumed to have a **less-than significant impact** under CEQA.

Construction Traffic Assessment

Although the Project would not generate a noticeable amount of trips to/from the site once in operation, the City requires an assessment of construction trips to ensure traffic operations and safety would not be degraded by construction activities. The Project requires demolition of the existing industrial buildings. The demolition phase of construction is expected to be the worst case with as many workers as any other construction phase, including needed SCE improvements, and the highest daily trip traffic due to off-hauling of demolition debris. To determine if the demolition trips will adversely affect the surrounding transportation network, the daily and peak hour trips generated by the existing industrial land uses were compared to the Project's demolition phase.

Existing Industrial Land Use Traffic Volumes

Figure 1 shows the three driveways that serve the existing industrial land use. Twenty-four-hour vehicle classification traffic counts were collected at the three driveways on Wednesday, September 25th, 2024. The traffic counts are provided in **Attachment A**, and **Table 1** summarizes the daily AM and PM peak hour vehicle classification trips.

Table 1: Existing Industrial Land Use Traffic Volumes

Location	Daily Total	AM In	AM Out	AM Total	PM In	PM Out	PM Total
Driveway One							
Total Trips	28	1	1	2	-	4	4
Autos and Light Truck Trips	24	1	1	2	-	4	4
Heavy and Medium Truck Trips	4	-	-	-	-	-	-
Driveway 2							
Total Trips	38	1	2	3	1	-	1
Autos and Light Truck Trips	35	1	2	3	1	-	1
Heavy and Medium Truck Trips	3	-	-	-	-	-	-
Driveway 3							
Total Trips	315	36	6	42	9	36	45
Autos and Light Truck Trips	304	35	6	41	9	36	45
Heavy and Medium Truck Trips	11	1	-	1	-	-	-
Total Driveway Trips							
Total Trips	381	38	9	47	10	40	50
Autos and Light Truck Trips	363	37	9	46	10	40	50
Heavy and Medium Truck Trips	18	1	-	1	-	-	-

Note: The trips shown represent the site's AM and PM peak hours of operation, 8:00 AM and 4:30 PM, respectively.
Source: Fehr & Peers, 2024.

Demolition Trip Generation

To estimate the traffic associated with the demolition of the existing industrial buildings, Fehr & Peers referenced prior traffic studies to develop an estimate of trips associated with demolishing existing structures. A very similar demolition project, *Draft Initial Study and Mitigated Negative Declaration (November, 2023)* for the Amar Industry Hills Development in the City of Industry, provides the basis for estimating demolition/construction trips associated with the Project. The Amar Industry Hills Development has the following key attributes:

- The Amar Hills Development analyzed the demolition of 164,259 square feet of industrial warehouse uses
- The Amar Hills Development study is located in the City of Industry
- The Amar Hills Development study was completed in 2023 and provides recent data

The Amar Industry Hills Development Initial Study and Mitigated Negative Declaration is provided as **Attachment B** and includes information about construction trips associated with the demolition of 164,259 square feet of industrial buildings.

Table 2 documents the daily trips and trip rates associated with the demolition of the Amar Industry Hills Development industrial land use. The daily trip rates documented in **Table 2** were applied to the existing industrial land use on the Project site to estimate the daily trips for the Project demolition phase, which are documented in **Table 3**.

The Amar Industry Hills Development study did not provide any information regarding the peak hour demolition trips. Construction activities typically begin and end earlier than the typical workday, in part, to avoid peak hour traffic. For the purposes of this analysis, a conservative estimate of 10 percent of the daily trips was used to estimate trips generated by the Project demolition phase. This assumption is based on our knowledge of the area and professional judgment. The Project demolition phase peak hour trip estimates are shown in **Table 4**.

Table 2: Amar Industry Hills Development Demolition Phase Daily Trips and Rates

Land Use Size (KSF)	Trip Type	One-Way Trips per Day	Round Trips per Day[1]	Vehicle Mix	Daily Trip Rate per KSF
164.259	Worker	15	30	Autos and Light Trucks	0.183
	Vendor	4	8	Heavy and Medium Trucks	0.049
	Hauling	63	126	Heavy Trucks	0.767

Note(s): Round trips per day were estimated by doubling the one-way trips per day.
Source: The Amar Industry Hills Development *Draft Initial Study and Mitigated Negative Declaration (2023)*.

Table 3: Project Demolition Phase Daily Trip Estimates

Land Use Size (KSF)	Trip Type	Daily Trip Rate per KSF	Vehicle Mix	Daily Trips
166.000	Worker	0.183	Autos and Light Trucks	30
	Vendor	0.049	Heavy and Medium Trucks	8
	Hauling	0.767	Heavy Trucks	125
			Total Trips	163
			Autos and Light Truck Trips	30
			Heavy and Medium Truck Trips	133

Source: Fehr & Peers, 2024.

Table 4: Project Demolition Phase Peak Hour Trips

Trip Type	Daily Trips	Peak Hour Factor	Peak Hour Trips
Total Trips	163	0.1	17
Autos and Light Truck Trips	30	0.1	3
Heavy and Medium Truck Trips	133	0.1	14

Note: Peak hour trips were rounded up to the nearest whole number.
Source: Fehr & Peers, 2024.

Comparison

Tables 5 and **6** show a comparison of the existing industrial land use and the Project demolition phase PM peak hour trips. The PM peak hour was chosen for the comparison as the existing industrial land use generates the most trips during this period. As shown in **Tables 5** and **6**, during the Project demolition Phase there will be 224 fewer daily trips and 34 fewer PM peak hour trips.

Since the Project demolition phase will generate fewer daily and peak hour trips than the trips generated by the existing industrial land use, it is anticipated that the demolition will not have an adverse effect on the surrounding transportation network.

Table 5: Existing Industrial Land Use and Demolition Phase Daily Trip Comparison

Trip Type	Existing Trips	Demolition Trips	Difference
Total Trips	381	163	(218)
Autos and Light Truck Trips	363	30	(333)
Heavy and Medium Truck Trips	18	133	115

Source: Fehr & Peers, 2024.

Table 6: Existing Industrial Land Use and Demolition Phase Peak Hour Trip Comparison

Trip Type	Existing Trips	Demolition Trips	Difference
Total Trips	50	17	(33)
Autos and Light Truck Trips	46	3	(43)
Heavy and Medium Truck Trips	4	14	10

Source: Fehr & Peers, 2024.

Conclusion

The Project plans to demolish 162,000 square feet of existing industrial land use and replace it with a Battery Storage Facility. The facility will have up to two employees and is expected to generate negligible daily trips. Therefore, the Project screens out from VMT assessment and is not required to complete a LOS assessment as it does not meet the daily and peak hour trip thresholds documented in the City's guidelines. Additionally, traffic associated with the Project construction phase is not expected to have an adverse effect on the surrounding transportation network, as the existing industrial land use generates 218 more daily trips and 33 more peak hour trips than the daily and peak hour estimated trips associated with the Project's construction phase.

ORDINANCE NO. 841

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF INDUSTRY, CALIFORNIA, AMENDING SECTION 17.16.010 (PERMITTED USES) OF CHAPTER 17.16 (INDUSTRIAL ZONE), AND ADDING CHAPTER 17.20 (BATTERY ENERGY STORAGE SYSTEM FACILITIES) TO TITLE 17 (ZONING), OF THE CITY OF INDUSTRY MUNICIPAL CODE, AND ADOPTING A MITIGATED NEGATIVE DECLARATION REGARDING SAME, AND MAKING FINDINGS IN SUPPORT THEREOF

RECITALS

WHEREAS, on September 29, 2010, the Governor of California signed into law Assembly Bill 2514 (AB 2514), which amended California Public Utilities Code Section 2835 and recognized the importance of energy storage technologies and required publicly owned utilities to invest in energy storage; and

WHEREAS, on September 10, 2018, the Governor of California signed into law Senate Bill 100 (SB 100), and mandates a target of 100 percent clean, zero-carbon electricity by 2045, and declared that increased use of battery energy storage is essential to achieving statewide greenhouse gas reduction and renewable energy goals; and

WHEREAS, allowing permitted and safely installed battery energy storage systems is consistent with California's broader climate, resilience, and clean-energy mandates and provides local benefits by enhancing grid stability, enabling greater use of local renewable energy, and supporting emergency backup power during extreme weather or wildfire-related outages; and

WHEREAS, pursuant to the police powers delegated to it by the California Constitution, the City has the authority to enact laws that promote the public health, safety, and welfare of its citizens, including location and regulations for battery energy storage system facilities; and

WHEREAS, an application for the development and operation of a battery energy storage system ("BESS") facility located at 16233, 16207, AND 16253 Gale Avenue (Assessor's Parcel Numbers 8242-016-033, -034, 036, -044, AND -061) was received; and

WHEREAS, this zoning amendment proposes a text amendment to add BESS facilities as a conditionally permitted use in the Industrial Zone and create regulations for the installation and use of such facilities; and

WHEREAS, based on Staff's review and assessment as lead agency pursuant to the California Environmental Quality Act ("CEQA", Public Resources Code § 21000 *et seq.*), Initial Studies/Mitigated Negative Declarations ("IS/MND") and Mitigation Monitoring Program ("MMRP") were prepared for the proposed battery storage project. The IS/MND includes a MMRP. The City, as lead agency, prepared and made available a Draft IS/MND (State Clearinghouse #2025120872) for public review and comment

pursuant to CEQA Guidelines Section 15070. The public review period was from December 16, 2025, through January 5, 2026. Subsequently, the City prepared a Final IS/MND incorporating text changes to the Draft MND pursuant to comments received on the Draft IS/MND during the public comment period. The City also provided written responses to all such comments, in memo form in the Final IS/MND.

WHEREAS, on January 7, 2026, notice of the Planning Commission's January 27, 2026, public hearing on the proposed Zoning Code amendment was published in the San Gabriel Valley Tribune, and was posted at City Hall, the City's Council Chambers, Fire Station 118, and on the City's website; and

WHEREAS, on January 27, 2026, the Planning Commission of the City of Industry conducted a duly noticed public hearing on Zoning Code Amendment No. 24-07, and considered all testimony written and oral, and adopted Resolution No. PC 2026-02, recommending that the City Council adopt the Ordinance; and

WHEREAS, on February 2, 2026, notice of the City Council's February 12, 2026 public hearing on Ordinance No. 841 was published in the San Gabriel Valley Tribune, in compliance with the City's Municipal Code and Government Code Section 65090; and

WHEREAS, on February 2, 2026, notice of the City Council's February 12, 2026 public hearing on Ordinance 841 was posted at City Hall, the City's Council Chambers, Fire Station 118, and on the City's website; and

WHEREAS, on February 12, 2026, the City Council of the City of Industry conducted a duly noticed public hearing on Ordinance No. 841, and considered all testimony written and oral; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF INDUSTRY, CALIFORNIA, DOES HEREBY ORDAIN AS FOLLOWS:

SECTION 1. Findings.
The City Council finds that based on substantial evidence presented to the City Council during the February 12, 2026 public hearing, including public testimony and oral staff reports, that all of the facts set forth in the Recitals are true and correct, and are incorporated herein by reference.

SECTION 2. CEQA Findings.
Based upon substantial evidence presented to the City Council during the February 12, 2026 public hearing, including public testimony and written and oral staff reports, and which includes without limitation, CEQA, the CEQA Guidelines, and any documents provided by the public to the City Council at the February 12, 2025 public hearing, the City Council finds as follows:

The proposed Municipal Code amendment has been reviewed with respect to the applicability of the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"). The City Council has determined that the text amendment required an Initial Study/Mitigated Negative Declaration ("IS/MND") and Mitigation

Monitoring Program ("MMRP") for the project. The IS/MND includes a MMRP. The City, as lead agency, prepared and made available a Draft IS/MND (State Clearinghouse #2025120872) for public review and comment pursuant to CEQA Guidelines Section 15070. The public review period was from December 16, 2025, through January 5, 2026. Subsequently, the City prepared a Final IS/MND incorporating text changes to the Draft IS/MND pursuant to comments received on the Draft IS/MND during the public comment period. The City also provided written responses to all such comments, in memo form, in the Final IS/MND. The IS/MND, with the MMRP adequately address environmental impacts of the project. Based on the foregoing, on February 2, 2026, the City Council adopted Resolution No. CC 2026- 01 adopting the IS/MND and MMRP for the Project.

SECTION 3. Zoning Code Text Amendment Findings

A. This Ordinance is consistent with the goals, and policies of the City's General Plan. Expanding allowable uses within the Industrial zones allows the City to maintain a vibrant employment environment, by accommodating business as a primary land use and supporting basic industrial activities (Goal LU1, Policies LU1-1 and LU1-2). The inclusion of BESS facilities as a conditionally permitted use updates the Code to better reflect contemporary uses that provide a competitive business climate to serve the long-term economic future of the City. As proposed, BESS facilities are required to have a minimum size of 2.5 acres which can result from the consolidation of lots for single tenant uses (Goal LU2, Policy LU2-3) and BESS facilities will help maximize the competitive advantage of locating a business in the City through constructing and maintaining adequate infrastructure and services, by serving state goals related to the development and sustainability of renewable energy sources (Goal LU2, Policy LU2-5).

B. This Ordinance is consistent with the City's Zoning Code in that the Ordinance implements the stated objective measures of the Land Use Element, which will ensure the cohesive and orderly development of land within the City, consistent with the City's long-term goals. Further, the criteria contained within the Ordinance help address impacts to surrounding properties, through the application and use of the Building and Safety and Fire Codes. Accordingly, this Ordinance will not adversely affect surrounding properties and is compatible with existing zoning and use regulations, development standards, and furthers the intent and purpose of the adopted zoning code.

C. The Ordinance is not detrimental to the public health, safety, or general welfare and serves the goals and purposes of the Industry Municipal Code. Expanding allowable uses as contemplated in the Land Use Element of the General Plan will foster a mix of uses and employment that algins with the City's founding purpose of being a business and industrial hub, and maintaining an ideal setting for manufacturing, distribution, and industrial facilities. The Proposed Ordinance provides regulations limiting BESS facilities to the Industrial Zone, and provides safeguards including, without limitation, proximity to high fire hazard severity zones, and distancing from existing residential uses. Further requirements of the Ordinance also maintain public health safety and general welfare by requiring BESS facilities to comply with applicable Fire Codes, without limitation, the approval of a Hazard Mitigation Analysis, Emergency Response Plan, and a

Decommissioning Plan, which collectively ensure the safe operation of the facility and the protection of surrounding areas throughout and beyond the life of the BESS facility.

SECTION 4. Municipal Code Amendment.
Section 17.16.010.A (Permitted Uses) of Chapter 17.16 (Industrial Zone) is hereby amended in alphabetical order to add: Battery Energy Storage System Facilities, pursuant to Chapter 17.50.

SECTION 5. Municipal Code Amendment.
Section 17.50 (Battery Energy Storage System Facilities) is hereby added to Title 17 (Zoning) to read in its entirety as follows:

Sec. 17.50.010 – Battery Energy Storage System Facilities

This section shall be referred to as the "City of Industry Battery Energy Storage System Facilities Ordinance."

Should there be a conflict between the provisions of this section and other sections of the City of Industry Zoning Code, this section shall control.

Sec. 17.50.020 - Intent and purpose.

Battery Energy Storage System Facility regulations are adopted with the intent of advancing and protecting the public health, safety, and welfare of the City of Industry by establishing regulations for the installation and use of energy storage systems. The regulations herein are intended to protect the health, welfare, safety, and quality of life for the general public.

Sec. 17.50.030 - Classification of Battery Energy Storage System Facilities.

(a) Definitions. For the purposes of this section, the following definitions shall apply:

Battery Energy Storage System (Utility Scale). A system consisting of electrochemical, kinetic, thermal, or other form of energy-storage technology storage batteries, battery chargers, controls, power conditioning systems and associated electrical equipment, assembled together, capable of storing energy in order to supply electrical energy at a future time and will connect to a public utility grid not to include a stand- alone 12-volt car battery or an electric motor vehicle. A Battery Energy Storage System is a type of Energy Storage System.

Decommissioning Plan. A plan to retire the physical facilities of the battery energy storage system, including decontamination, dismantlement, rehabilitation, landscaping, and monitoring. The plan contains detailed information on the proposed decommissioning and covers the schedule, type, and sequence of decommissioning activities; waste management, storage, and disposal of the waste from decommissioning; the time limit for decommissioning and site rehabilitation.

Energy Storage System. A system which stores energy and releases it in the same form as was input, to a public utility grid.

Sec. 17.50.040 - Applicability.

(a) The requirements of this ordinance shall apply to utility-scale battery energy storage system facilities permitted, installed, or modified after the effective date of this ordinance, excluding general maintenance and repair and facilities subject to subsection (c).

(b) Utility-scale battery energy storage system facilities constructed or installed prior to the effective date of this ordinance shall not be required to meet the requirements of this section. Modifications to, retrofits or replacements of an existing battery energy storage system facility that increases the total energy storage system designed discharge duration or power rating shall be subject to this section.

(c) To the extent permitted by state law, the provisions of this ordinance may not apply to Battery Energy Storage System facilities that are subject to Chapter 6.2 (commencing with Section 25545) of Division 15 of the Public Resources Code, as amended.

Sec. 17.50.050 - Approvals Required

(a) Battery energy storage system facilities are permitted subject to approval of a Conditional Use Permit pursuant to Chapter 17.48, Design Review pursuant to Chapter 17.36 of this chapter, and approval of a Development Agreement, and/or Community Benefit Agreement as determined by the City Manager.

Sec. 17.50.060 – Siting Limitation

(a) A battery energy storage system facility is only permitted in the Industrial Zone (M), but shall not be located on a parcel in a very high fire hazard severity zone, based on City adopted maps.

(b) Battery energy storage system facilities shall not be constructed further than 1/2 mile from the connecting utility, as measured from the nearest point of each parcel boundary.

Sec. 17.50.070 - Development Standards.

(a) Battery energy storage system facilities must meet all applicable standards of the adopted Building and Safety Codes and of the adopted Fire Codes in effect on the date an application is submitted to the respective reviewing authority, and any other applicable laws, rules, or regulations.

(b) Battery energy storage system facilities shall be a minimum of 2.5 acres in size.

(c) Battery energy storage system facilities shall comply with the site design requirements set forth below in addition to all other applicable sections of the City of

Industry Zoning Code:

(1) Site Layout of BESS Units. In accordance with the Fire Code, separation distances between BESS units, enclosures, and groups of BESS units/enclosures, and setback distances from sensitive exposures, shall be validated by large-scale fire testing or modeling, as specified and approved by the Los Angeles County Fire Department.

(2) Battery energy storage system facilities shall not be located within 100 feet of any residential uses as measured from the nearest point between the energy storage system enclosures to property line of the residential use.

(3) Where visible from a public right of way, the site shall be fully enclosed by a minimum six-foot, solid wall. Where not visible from a public right of way, the site shall be enclosed by a minimum ten-foot, solid wall fencing. Said wall or fencing shall be located on the perimeter of the site, notwithstanding placement of wall or fencing to address safety hazards. Where visible from the public right of way, walls shall consist of either decorative concrete masonry block or decorative concrete tilt-up walls.

(4) No landscaping is required on the interior side of the screen walls.

(5) The minimum required landscape area shall be limited to the perimeter landscaping surrounding the perimeter screening wall or fencing adjacent to public right of ways and private streets. Landscaping shall not conflict requirements set by the Los Angeles County Fire Department.

(6) Solid walls surrounding facilities which are below grade of an adjacent street or property shall incorporate a berm/slope along the entire length of the wall to ensure facilities are not visible from public view.

(7) No equipment or appurtenances shall exceed the screen wall height described in subparagraph (3), above, unless it can be demonstrated through a line-of-sight analysis to the satisfaction of the director that the wall height will sufficiently screen said equipment and/or appurtenances. Enclosures for batteries and other systems shall not exceed fifteen feet in height.

(8) Accessory structures such as utility poles or utility connection equipment, substation switchyard, and similar equipment, necessary for the operation of the facility may exceed the height standards of the applicable zoning district subject to approval of a Conditional Use Permit specifically addressing height standards.

(9) On-site parking shall be provided as specified below:

i. For sites that include building(s), the number of parking spaces shall comply with requirements for public facilities and services set forth in Section 17.36.060.K.1.a of the Industry Municipal Code.

ii. For sites that do not include buildings, two on-site parking spaces shall be provided.

i. All parking, fire access roadway, and drive aisles shall be paved with asphalt or concrete.

(10) All facilities shall have an approved signage plan including safety signage to be posted at the site.

(11) All improvements and site specifications shall be subject to approval of a Hazard Mitigation Analysis by the Los Angeles County Fire Department.

(12) Emergency Response Plan (ERP).

i. An Emergency Response Plan (ERP) shall be reviewed and approved by the Los Angeles County Fire Department. Site personnel must maintain and train on the ERP for the life of the installation, as directed by the Los Angeles County Fire Department.

ii. An after-incident mitigation company shall be on retainer at all times, maintained in the list of contacts in the ERP, and disclosed to the Los Angeles County Fire Department.

iii. The owner or operator of a battery energy storage system facility shall submit an ERP pursuant in accordance with all applicable laws, with the Conditional Use Permit application for a battery energy storage system facility. Said plan shall be reviewed and approved by the Los Angeles County Fire Department.

(13) Any permit application that includes a request for deviation from development standards set forth in this section shall be reviewed through a Conditional Use Permit process, and does not require a Variance application. The approving authority shall make the following finding prior to approval of a request to deviate from development standards set forth by this ordinance:

"The alternative development standard(s) will result in an equivalent or better project in terms of adverse impacts and public benefits to the immediate and surrounding community."

Sec. 17.50.080 - Decommissioning.

(a) Decommissioning Plan. The applicant shall submit a Decommissioning Plan which shall be reviewed and approved by the City and the Los Angeles County Fire Department, and other agencies as may be required. The Decommissioning Plan shall include all of the following:

i. A narrative description of the activities to be accomplished, including who will perform that activity and at what point in time following the closure of the facility, for complete physical removal of all battery energy storage system components, structures, equipment, security barriers, and transmission lines from the site;

ii. Disposing of all solid and hazardous waste in accordance with local, state, and federal waste disposal regulations;

iii. The anticipated life of the battery energy storage system;

iv. The manner in which the battery energy storage system will be decommissioned, and the site restored to a condition reasonably similar to its original state, including a description of how any changes to the surrounding areas and other systems adjacent to the battery energy storage system, such as, but not limited to, structural elements, building penetrations, means of egress, and required fire detection suppression systems, will be protected during decommissioning and confirmed as being acceptable after the system is removed; and

v. A listing of any contingencies for removing an intact operational battery energy storage system from service, and for removing a battery energy storage system from service that has been damaged by a fire or other event.

(b) Ownership/Operator Changes. A new owner or operator shall notify the Director of such change in ownership or operator and assumes in writing all the obligations of the project within 90 days of the ownership change. Failure to provide timely notice and assumption of obligations shall constitute a violation of the Conditional Use Permit and shall be grounds for revocation of the permit. Reinstatement of a project or approvals will be subject to the same review and approval processes for new applications under this chapter.

Sec. 17.50.090 - Performance Measures and Standard Conditions of Approval.

The following measures shall be included as performance measures and standard conditions of approval for all battery energy storage system facilities to which this chapter applies.

(a) Facilities shall not store any products, goods, materials, or containers outside of any on-site building or battery enclosures.

(b) Anti-graffiti coating to prevent graffiti shall be provided for all solid screen walls.

(c) Facilities shall comply with the noise regulations set forth in Health & Safety Code § 46000 et seq. and Gov't Code § 65302(f).

(d) Operators shall address any nuisance, safety issues, or violations of conditions of approval within forty-eight hours of being notified by the City of Industry that an issue exists.

(e) The owner and/or operator is responsible for submitting an updated Decommissioning Plan to the Los Angeles County Fire Department for approval whenever modifications are made to an approved Decommissioning Plan.

(f) A written security program for the premises shall be reviewed and approved by the Los Angeles County Sheriff's Department.

(g) The applicant is required to update the Hazard Mitigation Analysis (HMA) to account for changes to the proposed BESS facilities project during the building permit review process. Prior to issuance of a building permit, an updated HMA, if required, shall be approved by the Los Angeles County Fire Department.

SECTION 6. Clerical Errors.
The City Council directs the City Clerk to correct any clerical errors found in this Chapter, including, but not limited to, typographical errors, irregular numbering, and incorrect section references.

SECTION 7. Severability.
Should any section, subsection, clause, or provisions of this Ordinance for any reason be held to be invalid or unconstitutional, such invalidity of unconstitutionality shall not affect the validity or constitutionality of the remaining portions of this Ordinance; it being hereby expressly declared that this Ordinance, and each section, subsection, sentence, clause, and phrase hereof would have been prepared, proposed, approved, and ratified irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared invalid, unenforceable, or unconstitutional.

SECTION 8. Effective Date.
In accordance with California Government Code § 36937, this Ordinance shall take effect and be in force thirty (30) days from passage and adoption.

SECTION 9. Publication.
The City Clerk shall certify to the passage and adoption of this Ordinance and shall cause this ordinance to be published and posted as required by law.

PASSED, APPROVED AND ADOPTED by the City Council of the City of Industry, California, at a regular meeting held on February 12, 2026, by the following vote:

RESOLUTION NO. CC 2026-03

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF INDUSTRY, CALIFORNIA, APPROVING DEVELOPMENT PLAN NO. 24-09, FOR THE CONSTRUCTION OF A BATTERY ENERGY STORAGE SYSTEM FACILITY LOCATED AT 16233, 16207, AND 16253 GALE AVENUE, CALIFORNIA (ASSESSOR'S PARCEL NUMBERS 8242-016-033, -034, -044, AND -061), AND MAKING FINDINGS IN SUPPORT THEREOF

RECITALS

WHEREAS, Marici Project LLC ("Applicant"), filed a complete Application requesting approval of the following entitlements for the properties located at 16207, 16233, and 16253 Gale Avenue, City of Industry, California further described as Assessor's Parcel Numbers (8242-016-033, -034, -044, and -061) ("Property"):

- Zoning Code Amendment (ZCA No. 24-07) to allow a Battery Energy Storage System ("BESS") use with a Conditional Use Permit;
- Development Plan (DP No. 24-09) to approve the development plan for the BESS;
- Conditional Use Permit (CUP No. 24-03) to allow the proposed BESS use; and
- Community Benefit Agreement (CBA No. 25-01) to grant specified community benefits to the City.

WHEREAS, the Project is located on a 9.2-acre site, and is currently developed with warehouse, manufacturing, and industrial uses totaling 161,781 square feet of building space, and approximately 205,000 square feet of asphalt and concrete surfacing; and

WHEREAS, the Applicant proposes to demolish the existing development, and develop the Project; and

WHEREAS, the Property has a General Plan Land Use designation of Employment and zoning designation of Industrial (APN: 8242-016-033, -034, -044, and -061); and

WHEREAS, the proposed use and development is a 400-megawatt BESS Facility consisting of lithium-ion batteries installed in racks, inverters, medium-voltage transformers, switchgear, a collector substation, and other associated equipment to interconnect into the Southern California Edison (SCE) Walnut Substation. The enclosures will have battery storage racks, with relay and communications systems for

automated monitoring and management of the batteries to ensure design performance. A battery management system will be provided to control the charging/discharging of the batteries, along with temperature monitoring and control of the individual battery cell temperature with an integrated cooling system. Power inverters to convert between AC and DC, along with transformers to step up the voltage, will also be included; and

WHEREAS, in accordance with Section 17.36.020 of the City's Municipal Code ("Code"), a Development Plan Application is required for the construction of the Project; and

WHEREAS, in accordance with the provisions of the California Environmental Quality Act ("CEQA"), (Cal. Pub. Resources Code §§21000 *et seq.*), an initial study was performed, the result of which was the preparation and circulation of a mitigated negative declaration ("IS/MND") analyzing the proposed Project and concluding that the approval of the Project does not have a significant effect on the environment because the impacts of the Project could all be mitigated to levels below established CEQA thresholds of significance with the adoption of mitigation measures and enforcement of such measures through a Mitigation Monitoring and Reporting Program ("MMRP"); and

WHEREAS, the Notice of Availability and Notice of Intent to Adopt the IS/MND was published in the San Gabriel Valley Tribune newspaper on December 16, 2025, and the IS/MND was circulated for public and agency review and comment on December 16, 2025, through and including, January 5, 2025. Copies of the IS/MND were made available to the public at the City of Industry City Hall on December 16, 2025, and the IS/MND was distributed to interested parties and agencies; and

WHEREAS, on January 27, 2026, the Planning Commission conducted a duly noticed public hearing, and reviewed and carefully considered the information in the IS/MND and MMRP, and all testimony written and oral, and adopted Resolution No. PC 2026-01 recommending that the City Council approve the IS/MND and notice of determination regarding same, adopted Resolution No. PC 2026-02 recommending that the City Council approve Zoning Code Amendment No. 24-07, adopted Resolution No. PC 2026-03 recommending that the City Council approve Development Plan Application No. 24-09 for the development of the proposed BESS facility, adopted Resolution No. PC 2026-04 recommending that the City Council approve Conditional Use Permit No. 24-03 to allow the proposed BESS facility and recommended that the City Council approve Community Benefit Agreement No. 25-01; and

WHEREAS, notice of the City Council's public hearing on the Application was published in The San Gabriel Valley Tribune on February 2, 2026, was mailed to property owners within 300 feet of the Property, and was posted at the Property and at City Hall Council Chambers, Fire Station 118, and the City's website on February 2, 2026; and

WHEREAS, on February 12, 2026, the City Council of the City of Industry conducted a duly noticed public hearing to consider the Project, including the IS/MND and MMRP, and considered all testimony written and oral; and

WHEREAS, all legal prerequisites prior to adoption of this Resolution have occurred.

NOW THEREFORE, the City Council of the City of Industry hereby finds, determines, and resolves as follows:

SECTION 1: The City Council finds that all the facts set forth in the Recitals above are true and correct and are incorporated herein by reference.

SECTION 2: All necessary public hearings and opportunities for public testimony and comment have been conducted in compliance with State law and the City's Code.

SECTION 3: Based upon substantial evidence presented to the City Council during the February 12, 2026, public hearing, including public testimony and written and oral staff reports, and which includes without limitation, CEQA, the CEQA Guidelines, the IS/MND, MMRP and the City's Code, and any documents provided by the public to the City Council at the February 12, 2026, public hearing, the City Council finds as follows:

(a) The site is suitable for development in accordance with the development plan.

The site is suitable for development in accordance with the development plan in that the Project is in conformance with the City's General Plan, Zoning Code and all applicable development standards outlined in Section 17.36.060 of the Zoning Code and any future adopted Code requirement as outlined in Zoning Code Amendment No. 24-07. Further, pursuant to the provisions of the General Plan, industrial uses are permitted in the Employment land use designation, and the Project does not conflict with the established goals and objectives of the Land Use Element of the General Plan. In accordance with the provisions of ZCA No. 24-07, a BESS Facility is permitted in the Industrial Zone, subject to the approval of a CUP.

(b) The total development is arranged so as to avoid traffic congestion, ensure the public health, safety, and general welfare, or prevent adverse effects upon neighboring properties.

The total development is arranged to avoid traffic congestion, ensure the public health, safety, and general welfare, or prevent adverse effects upon neighboring properties, because it has been designed to minimize any potential impacts by complying with the City's Code. Furthermore, the City's Engineering Department has

found the Project's circulation pattern to be in conformance with local, state, and federal regulations regarding circulation and traffic pattern design. Additionally, there is adequate circulation around the Project site and the parking lot, thereby avoiding any potential traffic impacts such as congestion and/or stacking.

In addition, the San Gabriel Valley Council of Governments (SGVCOG) has developed an online VMT evaluation tool to assess whether a project is screened out from further VMT analysis. The analysis concluded that the Project would screen out using both the TPA screening criteria and Low VMT Area screening criteria as the project will generate less than the City of Industry average VMT using the Total VMT per Home-based Work metric. Therefore, the Project would not have significant conflict with a program, plan, or ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

Furthermore, the City's building permit process and LA County Fire permit process ensures that the proposed Project is built in accordance with all City, County, and State standards, thus protecting the public health, safety, and welfare. The potential for catastrophic events (such as a fire, structural failure, or natural hazards) is specifically addressed through the City's building permit process and the LA County Fire permit process. These reviews require compliance with applicable Building Code and Fire Code provisions, which are expressly designed to mitigate risks associated with worst-case and emergency scenarios, including impacts to surrounding uses including the residential uses.

Building and fire safety standards incorporate requirements related to structural integrity, fire resistance, emergency access, and life safety systems. Compliance with these standards reduces the likelihood and severity of catastrophic events and limits the potential for off-site impacts, including effects on adjacent residential properties. Therefore, it has been determined that the Project is not detrimental to the public health, safety, or welfare, and will not have adverse effects upon neighboring properties.

(c) The development is in general accord with all elements of this title.

The Project site is designated Industrial (M), and the proposed ZCA No. 24-07 allows BESS Facilities in the Industrial Zone, subject to the approval of a CUP. Additionally, the conditions of approval for the Project set operational and management standards to ensure that the BESS facility will operate in a manner consistent with the General Plan's policies related to noise, safety, property maintenance, and maintaining a professional appearance. Therefore, it has been determined that the proposed Project is consistent with the City's Zoning Code.

(d) The development is consistent with the provisions of the general plan or any applicable redevelopment plan.

The proposed development plan is consistent with the General Plan, including the Employment Land Use Designation applicable to the Property. As stated in the General Plan, the Employment land use designation is intended to provide for a full range of industrial uses that are acceptable within the community, but whose operations are more intensive and may have nuisance or hazardous characteristics, which for reasons of health, safety, environmental effects, or general welfare, are best segregated from other uses, and uses handling hazardous materials would be permitted only with proper safeguards and a conditional use permit.

The proposed use and development are consistent with the General Plan Land Use Goal LU2, and Resource Management Goal RM2.

The Project addresses Land Use Goal LU2, which encourages a competitive business climate and blend of businesses that best serve the long-term economic future of the City. Additionally, the Project is consistent with General Plan Policy LU2-6, which states the City should "[s]upport the use of energy-saving designs and equipment in all new development and rehabilitation or reconstruction projects." The BESS Facility is expected to facilitate the integration of clean, renewable energy sources into the grid. Excess energy generated during off-peak hours can be stored and dispatched during peak demand, reducing the need to generate additional power from fossil fuels.

The Project addresses Resource Management Goal RM2 which recognizes the City's responsibility to participate in a regional effort to improve the air quality and reduce greenhouse gas emissions. The Project is consistent with General Plan Policy RM2-2, which states the City should "[s]upport efforts to reduce pollutants to meet State and Federal Clean Air Standards." The Project is consistent with this policy via its role in transitioning to renewable energy to reduce emissions of pollutants and greenhouse gasses. This transition will help support the SCE grid and the San Gabriel Valley region as a whole which includes the City of Industry and several of its businesses.

SECTION 4: Based on the foregoing, the City Council approves DP No. 24-09 subject to the Conditions of Approval, attached hereto as Attachment 1, and incorporated herein by reference, subject to the approval and effective date of Ordinance No. 841 .

SECTION 5: The provisions of this Resolution are severable and if any provision, clause, sentence, word, or part thereof is held illegal, invalid, unconstitutional, or inapplicable to any person or circumstances, such illegality, invalidity, unconstitutionality, or inapplicability shall not affect or impair any of the remaining provisions, clauses, sentences, sections, words, or parts thereof of the Resolution or their applicability to other persons or circumstances.

SECTION 6: The City Clerk shall certify the adoption of this Resolution and the same shall be in full force and effect upon the effective date of Ordinance No. 841.

PASSED, APPROVED AND ADOPTED by the City Council of the City of Industry at a special meeting held on February 12, 2026, by the following vote:

Conditions of Approval – DP 24-09

[Attached]

CITY OF INDUSTRY

Standard Requirements and Conditions of Approval

Application: **Development Plan No. 24-09**

Applicant: **Marici Project LLC**

Location: **16233,16207, and 16253 Gale Avenue, (APN 8242-016-033, -034, -044, and -061) City of Industry**

Conditions of Approval

Conditions of approval are unique provisions, beyond the requirements of law, the municipal code, or standard practices that are applied to a Project by the City Council per Section 17.36.080 of the Zoning Code. Please note that if the design of your Project or site conditions changes, the conditions of approval may also change. If you have any questions regarding these requirements, please contact the City of Industry.

For purposes of these conditions, the term "Property Owner" shall include any party or parties other than the Successor Agency to the Industry Urban-Development Agency, and/or the City of Industry.

PLANNING DIVISION

Development Plan Conditions

1. Approval of this Development Plan (DP) request shall apply only to the subject project and shall not waive compliance with all sections of the Zoning Ordinance, and all other applicable City Ordinances in effect at the same time as Building Permit Issuance. The approved use is a new for a Battery Energy Storage System Facility, and for no other use.

2. The Applicant and Property Owner shall file an executed and acknowledged Acceptance of Terms and Conditions of Development Plan No. 24-09 within 10 calendar days after the approval of said entitlements. The Applicant and Property Owner understand and agree that approval of the Resolution for Development Plan No. 24-09 will be of no force or effect unless such written consent is submitted to the City within the stated 10-day period.

3. Failure to comply with any of the conditions set forth herein, or as subsequently amended in writing by the City, may result in failure to obtain a building final and/or a Certificate of Occupancy until full compliance is reached. The City's requirement for full

compliance may require minor corrections and/or complete demolition of a noncompliant improvement, regardless of costs incurred, where the Project does not comply with design requirements and approvals that the Applicant agreed to when permits were pulled to construct the Project.

4. Construction plans submitted for Building Permits shall be in substantial compliance with plans approved by this action of the City Council. Any major modifications to the use, building, site, or Project description shall be subject to review and approval by the Planning Department and may require a separate planning entitlement review process.

5. A copy of the conditions of approval provided herein shall be included in the construction documentation package for the Project, which shall be continuously maintained on site during construction.

6. It shall be the responsibility of the Property Owner and Applicant to ensure that any required permits, inspections, and approvals from any regulatory agency shall be obtained from the agency concerned prior to the establishment of the use.

7. The Project uses shall always operate in a manner that is not detrimental to surrounding properties or residents by reason of lights, noise, activities, parking, or other actions.

8. All building corners shall be established by a licensed surveyor prior to construction of the foundation.

9. Prior to issuance of a building permit, the Applicant shall submit a Lighting Plan showing locations and height of all exterior lighting fixtures with arrows showing the direction of light being cast by each fixture for review and approval of the City of Industry Planning Department, the Los Angeles County Building and Safety Department and the Los Angeles County Sheriff's Department.

10. The Lighting Plan shall ensure any exterior night lighting installed on the Project site is of low intensity, low glare design, minimum height, and shall be hooded to direct light downward onto the subject lot and prevent spill-over onto adjacent lots. The fixtures will be reviewed for quality, aesthetics, illumination values, sustainability values such as LED and shall be decoratively and architecturally consistent with the building design. The location, height, style, and design shall be reviewed and approved by the City of Industry Planning Department and the Los Angeles County Building and Safety Department.

11. A complete landscape/irrigation package prepared by a landscape architect licensed by the State of California shall be reviewed and approved by the City of Industry Planning Department prior to issuance of building permit. The plans shall include the following elements: a. Water conservation concept statement. b. Calculation of maximum applied water allowance. c. Calculation of estimated total water use. d. Landscape design plan. e. Irrigation design plan. f. Certificate of substantial completion. g. The landscape plan shall demonstrate compliance with Zoning Ordinance requirements related to minimum dimensions and percentages of landscaping in parking areas, including required front yard setback landscaping.

12. Prior to the issuance of certificate of occupancy, the Applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify in writing that it was installed in accordance with the approved plan. Said written certification shall be submitted to the Planning Department.

13. The landscape irrigation system shall be designed to accept recycled water from future recycled water lines, which are currently being planned to be in the area. The irrigation plan, which is submitted to the City for approval per Chapter 13.18 of the Municipal Code, shall be designed and clearly noted to allow the transition from potable water to recycled water when and if recycled water lines are eventually installed in the immediate vicinity.

14. All irrigation systems shall function properly, and landscaping shall be maintained in a healthy and thriving condition. The maintenance of landscaping and the irrigation system shall be permanently provided for all areas of the Project site, as well as walkways and the portion of public rights-of-way abutting the Project site. Furthermore, the plans shall identify responsibility for the continued maintenance.

15. Trash enclosures shall be provided with three decorative walls, enhanced wall caps, a pedestrian entrance, a gate, and a structural steel cover, in a style compatible with the structure's architecture. The gate shall be maintained in working order and shall remain closed except when it is in use.

16. Storage use and removal of toxic substances, solid waste, and flammable liquids shall conform to all applicable federal, state, and local regulations. All required licensing shall always be maintained.

17. All proposed mechanical units, air conditioning equipment, blowers, make-up air units, ducts, etc. shall be shown on the building permit plans. The Applicant shall effectively screen from view all ducts, blowers, air conditioning equipment, and any other mechanical equipment, whether on the structure, on the ground, or on the roof, with materials architecturally compatible with the building. Screening details shall be shown on the plans submitted for issuance of building permits, the adequacy of which shall be determined by the Planning Department. All required screening shall be provided prior to occupancy. The construction plans shall include appropriate elevations and cross-section drawings demonstrating how such equipment is to be screened from view (include dimensions, materials, colors, etc.).

18. All ground mounted utility structures such as transformers and back flow prevention valves shall be located out of view from a public street or screened using landscaping and/or masonry walls.

19. A bumper guard or wheel stops shall be provided, where necessary, to protect the structure or parked vehicle.

20. The Applicant, and/or Property Owner shall arrange for a final inspection by representatives of the City of Industry Planning Department, the Los Angeles County

Building and Safety Department, the City of Industry Public Works Department, and the Los Angeles County Fire Department (LACoFD) prior to the release of occupancy. Any discrepancy between the approved plans and the field conditions shall be remedied prior to occupancy such that the field condition is consistent with the approved plans.

21. Pedestrian paths shall be maintained in such manner to allow the safe and convenient passage of people across drive aisles. Pedestrian pathways shall be clearly marked with paint and/or enhanced paving materials and designated with adequate and appropriate signage. Pedestrian pathways adjacent to the drive aisles shall be separated by a raised curb or other device to ensure a safe and adequate separation between pedestrians and motor vehicles.

22. Prior to any permit issuance, the Applicant shall provide a letter to the Planning Department that certifies that the following will be adhered to during all stages of development:

    - All equipment used on site meets the EPA Tier 4 Interim emissions standards for off-road diesel-powered construction equipment with more than 50 horsepower, unless it can be demonstrated to the City that such equipment is not available. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 4 diesel emissions control strategy for a similarly sized engine, as defined by CARB's regulations.

    - All equipment used on site has emission noise control parts in place and has not been altered in any way from their initial condition as delivered from the factory.

    - A list of all operating equipment in use on the construction site including the make, model, and numbers of each piece of equipment.

    - All equipment shall be properly serviced and maintained in accordance with the manufacturer's recommendations.

    - All nonessential idling of construction equipment is limited to no more than five minutes or less in compliance with Section 2449 of the California Code of Regulations, Title 13, Article 4.8, Chapter 9.

23. Prior to issuance of grading permits, Applicant shall identify to the Planning Department a construction relations officer to function as a community liaison concerning on-site activity, including resolution of issues related to dust generation from grading/paving activities.

24. Electronic gates shall be equipped with a Knox electric switch and an alternative energy back-up system, such as a generator or battery, which would allow operation of the security gate(s) during an electrical power outage. Access through the gates shall be provided for both the Los Angeles County Fire and Sheriff Departments. The location of Knox boxes shall be shown on the building plans and approved by both the LACoFD

and the Los Angeles County Sheriff Department.

25. A note shall be added to the building plans stating that the construction contractor shall only use interior and exterior paints with a VOC content of 90 grams per liter (g/L) or less for the building structures to reduce VOC emissions. Prior to issuance of building permits, the construction contractor shall provide documentation to the satisfaction of the Planning Department that verifies use of coatings with a VOC content of 90 g/L or less.

26. The Applicant/Property Owner shall comply with all surface drainage and driveway requirements set forth in the City's Code.

27. The applicant shall submit a complete set of electronic plans that conform to all the Conditions of Approval to be reviewed and approved by the Planning Division prior to Building and Safety plan check submittal.

28. There shall be no deviation of architectural design or details from the approved set of plans. The Planning Division shall first approve any alteration.

29. Prior to Issuance of Building Permit, a wall design specification and plan details including colors and materials must be submitted and approved by the Planning Division to assure a decorative wall design is provided.

30. Prior to Building Permit Final, the Project shall demonstrate that LACoFD and any other agencies have reviewed and approved the Project.

31. The Project would be properly segregated from other surrounding industrial uses and include all proper safeguards, including a reinforced 10-foot-high CMU block wall to be built around the site.

32. For the Project, none of the battery enclosures will be permitted to be within 25 feet of any property line.

33. The battery enclosures will be required to be equipped with internal, failsafe heat and gas detection and alarm systems, which shall provide audio and visual early warnings of increases in heat or gas in any battery enclosure to a third-party reporting station that actively monitors for such warnings on a 24/7/365 basis. Furthermore, whenever any of the batteries fail, reach the end of their useful life, or need to be disposed of due to a legal requirement or due to their continued presence posing an added risk to public health or safety, the Project applicant will be required to promptly discontinue use and dispose of such batteries in accordance with all applicable laws and regulations, including but not limited to those related to hazardous materials and hazardous waste.

34. A Hazardous Material Business Plan (“HMBP”) as defined by Section 25505 of the Health & Safety Code will be required to be prepared for the Project in accordance with established requirements and submitted to the City and LACoFD for review and approval. The requirements for HMBP shall include the following:

    - An inventory of hazardous materials onsite.

- An Emergency Action Plan including procedures and contacts for communicating an immediate response to a reportable release or threatened release of a hazardous material, and procedures to mitigate a release or threatened release.
- Employee training in project safety procedures and emergency response plans and procedures in the event of a reportable release or threatened release.
- A site map that depicts north orientation, loading areas, internal roads, adjacent streets, storm, and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, and emergency response equipment

35. Prior to issuance of a Certificate of Occupancy, the Project shall demonstrate compliance with all then-applicable mitigation measures in the MND/MMRP. A final mitigation monitoring matrix/spreadsheet demonstrating such compliance shall be submitted to the Planning Division for review and approval.

36. The Applicant shall comply with all the requirements set forth in the mitigation measures of the MND for the Project. In the event of any conflict between the Conditions of Approval set forth herein and those set forth in the MND, the mitigation measures set forth in the MND shall prevail.

Mitigation Measures

37. CUL-1 Retention of a Qualified Archaeologist

    Prior to the issuance of grading permits, a qualified archaeologist shall be retained by the project applicant to monitor during ground-disturbing activities in native soils and address any inadvertent discoveries identified for the duration of construction activities. In consideration of the potential to encounter intact cultural deposits beneath imported (non-native) fill soils and/or existing development, the qualified archaeologist shall survey the development area once fill soils have been removed to ensure that no cultural deposits underly the fill layer. If it is determined, based on the surveys during ground-disturbing activities into native soils, that cultural resources are present or may be present that may be impacted during project construction, further study including subsurface testing as well as archaeological monitoring may be warranted. If it is determined that monitoring is warranted, a qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, shall oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor shall be responsible for maintaining daily monitoring logs.

38. CUL-2: Inadvertent Discovery Treatment and Protocol

    In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities, all construction work occurring within 50 feet of the find shall immediately stop and a qualified archaeologist shall be notified immediately to assess the significance of the find and determine whether or not additional study is warranted. If human remains or suspected human

remains are discovered, all construction work occurring within 50 feet of the find shall immediately stop. Encroachment into the 50-foot buffer may occur at the discretion of a qualified archaeologist. Depending on the significance of the find, the archaeologist may simply record the find and allow work to continue. If the discovery proves to be significant under CEQA as determined by the qualified archaeologist, additional work such as preparation of an archaeological treatment plan, testing, data recovery, or monitoring may be warranted. Within 60 days following completion of ground disturbance, an archaeological monitoring report shall be prepared and submitted to the City of Industry for review. The report shall document compliance with approved mitigation, document the monitoring efforts, and include an appendix with daily monitoring logs. The final report shall be submitted to the South-Central Coastal Information Center. Geology and Soils.

39. GEO-1: Paleontological Discovery

In the event that fossils or fossil locality deposits are discovered during ground disturbing activities (e.g., trenching, soil removal), excavation within 100 feet of the fossil locality shall be temporarily halted until removal occurs. Encroachment into the 100-foot buffer may occur at the discretion of a qualified paleontologist. The contractor shall notify a qualified paleontologist to investigate its significance. If the fossil locality is determined to be significant by the qualified paleontologist, the paleontologist shall work with the project applicant and construction contractor to follow accepted professional standards, such as further testing for evaluation or data recovery, as necessary. The paleontologist shall notify the appropriate agencies to determine procedures that shall be followed before construction is allowed to resume at the location of the find. If the project applicant determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of the project based on the qualities that make the resource important.

40. NOI-1

The construction contractor shall limit construction activities to between the hours of 7:00 a.m. and 7:00 p.m. daily, as required by the Los Angeles County Code 12.08.440, Construction Noise. Construction is prohibited outside these hours. Construction is also prohibited on Sundays and County of Los Angeles holidays. The construction contractor shall also implement the following best practices:

- Utilize sound control devices no less effective than those provided by the manufacturer.
- Maintain equipment in accordance with the manufacturer's recommendations.
- No equipment will have unmuffled exhausts.
- Equipment idling will be kept to a minimum.

41. TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

The Project applicant shall retain a Native American Monitor prior to the commencement of any “ground-disturbing activity” for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project

description/definition and/or required in connection with the project, such as public improvement work). “Ground-disturbing activity” shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching. A copy of the executed monitoring agreement shall be submitted to the City prior to the commencement of any ground-disturbing activity. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered tribal cultural resources (TCR), as defined by Section 21074(a) of the Public Resources Code. Copies of monitor logs will be provided to the City upon written request to the Tribe. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the monitor and/or archeologist. The tribal monitor will recover and retain discovered TCRs in the form and/or manner they deem appropriate, and for any purpose the Tribe deems appropriate, including for educational, cultural, and/or historic purposes.

42. TCR-2: Unanticipated Discovery of Human Remains and Associated Funerary Objects

Native American human remains are defined in PRC 5097.98(d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute. If Native American human remains and/or grave goods are discovered or recognized on the Project Site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human remains shall be immediately reported to the County Coroner, and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2). Construction activities may resume in other parts of the Project Site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the tribal monitor determines that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (CEQA Guidelines Section 15064.5(f)). Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any discovery of Native American human remains/burial goods shall be kept confidential to prevent further disturbance.

43. TCR-3: Procedures for Burials and Funerary Remains

To the Tribe, the term “human remains” encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. If the discovery of human remains includes

four or more burials, the discovery location shall be treated as a cemetery, and a separate treatment plan shall be created. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the Project cannot be diverted, it may be determined that burials will be removed. In the event preservation in place is not possible despite good faith efforts by the Project applicant, before ground-disturbing activities may resume on the Project Site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains; funerary objects, sacred objects, and objects of cultural patrimony will be removed to a secure container on-site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the Project Site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered. The Tribe will work closely with the Project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data, recovery data, and recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the Native American Heritage Commission. The Tribe does not authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

44. APM-1: Best Management Practices

    The project applicant will implement the Revised Soil and Groundwater Management Plan (SGMP) prepared for the proposed Project, which outlines best management practices (BMPs) for use in the event impacted soil or groundwater is encountered during construction of the proposed Project. The detailed list of BMPs to be implemented are outlined in the SMGP.

45. APM-2: Vapor Intrusion Mitigation System

    A vapor intrusion mitigation system (VIMS) will be implemented for the proposed office building to address the documented soil gas concentrations detected on-site.

46. APM-3: Emergency Action Plan

The project applicant will prepare an Emergency Action Plan (EAP) for submittal to and approval by the Occupational Safety and Health Administration (OSHA) in accordance with the provisions of Standard 1910.38 (Emergency action plans) of Part 1910 (Occupational Safety and Health Standards). A copy of the OSHA-approved EPA will be submitted to the City of Industry for its records.

47. APM-4: Emergency Response Plan

    To mitigate exposure to carbon monoxide and smoke as a result of a potential (although unlikely) runaway thermal event, an emergency response plan will be prepared by a qualified fire safety engineer for the specific design of the proposed BESS facility pursuant to the LACoFD requirements. The plan will be reviewed and approved by the LACoFD during the building permit process.

48. APM-5: Pre-construction Nesting Bird Survey

    If construction is scheduled to commence during the nonnesting season (i.e., September 1 to January 31), no preconstruction surveys or additional measures are required. To avoid impacts to nesting birds on the project site, a qualified wildlife biologist shall conduct preconstruction surveys of all potential nesting habitat within the project site for construction activities that are initiated during the breeding season (i.e., February 1 to August 31). The surveying biologist must be qualified to determine the status and stage of nesting by migratory birds and all locally breeding raptor species without causing intrusive disturbance. The raptor survey shall focus on potential nest sites (e.g., cliffs, large trees, windrows) around the project site. Surveys shall be conducted no more than 14 days prior to construction activities. If active nests are found, a suitable buffer (e.g., 200-300 feet for common raptors; 30-50 feet for passerine species) shall be established around active nests and no construction within the buffer allowed until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). Encroachment into the buffer may occur at the discretion of a qualified biologist.

In the event that any of the aforementioned mitigation measures conflict with the measures in the adopted IS/MND and MMRP, the measures in the IS/MND and MMRP shall prevail.

BUILDING DIVISION

49. The Project will be required to adhere to the provisions of the LACBC and CBC (The Los Angeles County Building Code (LACBC; Title 26 of the Los Angeles County Code) and the California Building Code (CBC; California Code of Regulations, Title 24, Part 2), adopted by reference in Title 15 (Buildings and Construction), Chapter 15.04 of the Industry Municipal Code).

50. The Project shall comply with the applicable provisions of the California Green Building Standards Code and provide at least 15 percent of the rooftop area for solar photovoltaic power.

51. Prior to the issuance of any permit a soils report is required to be submitted to the

Building Division for review and approval.

52. The Project shall provide Americans with Disabilities Act (ADA) compliance accessibility to public right-of-way.

53. The Project shall provide Americans with Disabilities Act (ADA) compliance throughout the site.

PUBLIC WORKS AND ENGINEERING

54. The Applicant shall provide drainage and grading plans to be approved by the City Engineer prior to the issuance of a building permit. Such plans shall be in substantial conformity with the development plans.

55. The Applicant shall supply sanitary sewer facilities to serve all buildings to the satisfaction of the City Engineer prior to the final approval of the development and hook-up utilities.

56. The Applicant must use the City of Industry Standard Plans.

57. Depending upon the nature of the proposed use, the Applicant shall obtain an Industrial Waste Permit or receive Domestic Wastewater Clearance from the City Engineer depending on the building use.

58. The Applicant shall use the City of Industry Benchmark's (NAVD-29) for all construction plans. Contact the City's survey department for benchmark information.

59. The Applicant shall construct storm drains and water quality devices to the satisfaction of the City Engineer prior to the final approval of the development and the hook-up of utilities.

60. In conformance with Chapter 13.16 of the Municipal Code, and prior to the start of grading and construction, the Applicant shall provide a Stormwater Pollution Prevention Plan (SWPPP), developed by a Qualified SWPPP Developer (QSD) and consistent with the current National Pollutant Discharge Elimination System (NPDES) construction general permit, along with proof that a Waste Discharger Identification (WDID) Number has been obtained, to the City Engineer for review and approval.

61. In conformance with Chapter 13.16 of the Municipal Code, the Applicant shall provide:

    1) a Low Impact Development (LID) plan; and

    2) an operations, maintenance, and monitoring plan to the City Engineer for review and approval. Upon approval, the Applicant shall construct storm drains and water quality devices according to the approved plans and the satisfaction of the City Engineer. Prior to building final and/or issuance of the certificate of occupancy, the Applicant shall provide the City Engineer with a signed and recorded covenant and agreement stating that the Property and all structural or treatment control Best Management Practices (BMPs) will be maintained in compliance with the

municipal NPDES permit (also sometimes called the MS4 permit) and other applicable regulatory requirements.

62. Prior to obtaining a Certificate of Occupancy Applicant shall submit digital copies of as-built plans to the City Engineer.

63. Prior to the close out of the grading permit the Applicant shall video via CCTV or any other applicable method all sewer and storm drain on-site and submit to the City Engineer for approval.

64. All existing easements within the project shall be Quitclaimed. No proposed structural shall be built over existing easements.

65. Applicant shall provide a Street and Highway Easement Grant Deed for the 30' wide frontage along Gale Avenue to the City of Industry.

66. Applicant shall provide sidewalk easement and at all driveway crossings for pedestrian path of travel along Gale Avenue, as needed and submit to the City Engineer for approval.

67. Applicant shall record a "Covenant and Agreement to Hold Property as One Parcel" for Parcel Nos. 8242-016-033, 8242-016-034, 8242-016-036, 8242-016-044, and 8242-016-061 prior to issuance of building occupancy.

FIRE DEPARTMENT

68. Before any permit is issued, besides those allowed by the building department to be at risk, the applicant shall submit and obtain approval from LACoFD of all facility and equipment plans subject to LACoFD authority. These plans shall include but not be limited to any necessary requests for variance(s) from the default prescriptive requirements of the Los Angeles County Fire Code [i.e., requests to "use an alternate material, assembly of materials, equipment, method of construction, method of installation of equipment or means of protection" from that which is prescribed by the codes and standards to be the default requirement. Said approvals from the LACoFD shall be obtained from the LACoFD, specifically the Engineering Section of the fire Prevention Division, and bear the signature of the LACoFD Fire Marshal

69. An Explosion-Hazard Early Warning Detection and Notification shall be required. Where the chemistry or design of the ESS, or battery ESS (BESS, or electrochemical ESS), is capable, during normal or failure modes, of creating an explosive atmosphere of consequence within the airspace of its battery compartment, room, or other enclosure (whether a full-volume or partial-volume explosive atmosphere)

    a. Early warning detection and notification via a fire-alarm system compliant with the Los Angeles County Fire Code and the NFPA-72 standard shall be designed with detection inside each battery compartment to effectively provide advanced warning of any accumulation towards an explosive limit of flammable/explosive gases, in accordance with the Los Angeles County Fire Code.

b. These detection devices shall be addressable.

c. Automatic notification serving potential impact areas via on-site sets of horns, beacons (red or orange), and signs, shall be provided as determined by LACoFD.

d. Automatic notification by the fire-alarm system shall be made to 9-1-1 as determined by LACoFD.

e. On-site identification of the particular enclosure(s) in alarm shall be achieved via horn-strobe notification device(s).

f. Gas detection systems, including any that are used to initiate an explosion-control system, shall comply with the requirements of NFPA 72 and be supervised by the fire-alarm system

70. An Explosion-Hazard Shielding shall be included requiring that the maximum-potential explosion-hazard consequences, including pressure-wave generation and projectile/shrapnel impact, for a battery-failure gas-accumulation scenario not less-severe than the scenario defined by the LACoFD, shall be established by a qualified third party and subject to approval by the LACoFD.

a. Based on the maximum-potential explosion-hazard results, an explosion-shielding wall that is engineered to provide protection from one such maximum-potential explosion occurrence, for the closest BESS enclosure thereto, for each BESS enclosure to be installed, shall be provided:

i. Around the entire BESS-installation perimeter of the BESS installation(s) or BESS field as a whole, to protect persons outside the facility; and

ii. As a shield for four persons operating at each required first-responder/fire-command station for these installations.

b. The height of these perimeter walls shall be a minimum height of 10 feet or exceed the height of the BESS enclosures by at least 18 inches, and shall in no case be less than any minimum height requirement set therefor by the jurisdictional planning agency.

c. Install a vehicular gate for fire apparatus access within the Project site providing an emergency vehicle access route. The vehicular gate shall provide a minimum unobstructed width of 26 feet or greater to accommodate for the fire apparatus turning radii and maneuvering ability to adjoining fire lanes. This gate shall be identified as Emergency Vehicle Access, meeting the design criteria as any other gates, and remain locked with an approved Fire Department locking device.

d. Fire apparatus access road gates through the wall shall be compliant with the Los Angeles County Fire Code, including Section 503 thereof and provide sufficient protection.

71. The site layout of the BESS units, in accordance with the Fire Code, will be required to have separation distances between BESS units, enclosures, and groups of BESS

units/enclosures, and setback distances from sensitive exposures called out by the Fire Code (e.g., combustibles, hazardous materials), shall be validated by large-scale fire testing or modeling, as specified and approved by LACoFD

CODE REQUIREMENTS AND STANDARDS

The following is a list of general planning conditions, code requirements and standards deemed applicable to the proposed Project. The list is intended to assist the Applicant by identifying requirements that must be satisfied during the various stages of Project permitting, implementation, and operation. It should be noted that this list is in addition to any "conditions of approval" adopted by the City Council and noted above. Please note that if the design of your Project or site conditions changes, the list may also change. If you have any questions regarding these requirements, please contact the City of Industry.

72. The Applicant and/or successor in interest shall comply with all Federal, State, County, and local laws, rules, and ordinances.

73. The Applicant shall pay off all existing deficit deposit accounts associated with processing this permit. The Applicant shall provide a receipt to the Planning Department, which shows that all discretionary deposit accounts have been paid. No Certificate of Occupancy or Final Planning Division Inspection will be issued/completed if there are deficit deposit accounts.

74. Current and future property owners, business managers, operators, successors, assigns, etc. shall be responsible for ensuring and complying with all conditions of approval contained herein.

75. The Applicant shall abide and continue to comply with all previous City approvals, permits, or requirements relating to the subject property, unless explicitly superseded or revised by this Approval.

76. The Applicant/Property Owner shall construct adequate fire protection facilities to the satisfaction of the LACoFD.

77. The Applicant/Property Owner shall supply sanitary sewer facilities to serve all buildings to the satisfaction of the City Engineer. One sewer connection per parcel is permitted and, in the case of multiple units or buildings, all sewer lines must join at the connection point.

78. The Applicant/Property Owner shall provide drainage and grading plans to be approved by the City Engineer prior to the issuance of any building permit. Such plans shall be in substantial conformity with the approved development plans.

79. In conformance with Chapter 13.16 of the Municipal Code and prior to the start of grading and construction, the Applicant/Property Owner shall provide a Storm Water Pollution Prevention Plan (SWPPP), developed by a Qualified SWPPP Developer (QSD) and consistent with the current National Pollutant Discharge Elimination System (NPDES) construction general permit, along with proof that a Waste Discharger Identification (WDID) Number has been obtained, to the City Engineer for

review and approval.

INTERPRETATION AND ENFORCEMENT

80. The City of Industry Planning Department, the Los Angeles County Building and Safety Department, the City of Industry Public Works Department, and the LACoFD shall be responsible for ensuring compliance with all applicable code requirements and conditions of approval.

81. The Planning Department may interpret the implementation of each condition of approval and, with advanced notice, grant minor amendments to approved plans and/or conditions of approval based on changed circumstances, latest information, and/or relevant factors if the spirit and intent of the approved condition of approval is satisfied. Permits shall not be issued until the proposed minor amendment has been reviewed and approved for conformance with the intent of the approved condition of approval. If the proposed changes are substantial in nature, an amendment to the original entitlement may be required pursuant to the provisions of Industry Municipal Code.

INDEMNIFICATION

82. The Applicant and any of its heirs, successors and assigns, shall defend, indemnify, and hold harmless the City and its elected officials, officers, employees, agents, and volunteers ("City Indemnitees") from any claim, action or proceedings, liability cost, including attorneys' fees and costs against the City Indemnitees, caused or alleged to have been caused by reason of the Applicant's activities in connection with Development Plan No. 24-09. This indemnity provision applies to all damages and claims for damages, as described above, regardless of whether the City prepared, supplied, or approved the plans, specifications, or other documents for Development Plan No. 24-09.

    In the event of any legal action challenging the validity, applicability, or interpretation of any provision of this approval, including the environmental review, or any other supporting document relating to Development Plan 24-09, the Applicant and its successors and assigns, shall indemnify, defend and hold harmless the City Indemnitees, and each of them, with respect to all liability, costs and expenses incurred by, and/or awarded against, the City Indemnitees in relation to such action. The City shall have the right to select counsel of its choice.

    The City shall promptly notify Applicant of any claim, action or proceeding, and shall cooperate fully in the defense thereof.

END OF CONDITIONS

RESOLUTION NO. CC 2026-04

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF INDUSTRY, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT NO. 24-03, TO ALLOW FOR A BATTERY ENERGY SYSTEM STORAGE FACILITY LOCATED AT 16233, 16207, AND 16253 GALE AVENUE, CALIFORNIA (ASSESSOR'S PARCEL NUMBERS 8242-016-033, -034, -044, AND -061), AND MAKING FINDINGS IN SUPPORT THEREOF

RECITALS

WHEREAS, Marici Project LLC ("Applicant"), filed a complete Application requesting approval of the following entitlements for the properties located at 16207, 16233, and 16253 Gale Avenue, City of Industry, California further described as Assessor's Parcel Numbers (8242-016-033, -034, -044, and -061) ("Property"):

- Zoning Code Amendment (ZCA No. 24-07) to allow a Battery Energy Storage System ("BESS") use with a Conditional Use Permit;
- Development Plan (DP No. 24-09) to approve the development plan for the BESS;
- Conditional Use Permit (CUP No. 24-03) to allow the proposed BESS use; and
- Community Benefit Agreement (CBA No. 25-01) to grant specified community benefits to the City.

WHEREAS, the Project is located on a 9.2-acre site, and is currently developed with warehouse, manufacturing, and industrial uses totaling 161,781 square feet of building space, and approximately 205,000 square feet of asphalt and concrete surfacing; and

WHEREAS, the Applicant proposes to demolish the existing development, and develop the Project; and

WHEREAS, the Property has a General Plan Land Use designation of Employment and zoning designation of Industrial (APN: 8242-016-033, -034, -044, and -061); and

WHEREAS, the proposed use and development is a 400-megawatt BESS Facility consisting of lithium-ion batteries installed in racks, inverters, medium-voltage transformers, switchgear, a collector substation, and other associated equipment to interconnect into the Southern California Edison (SCE) Walnut Substation. The

enclosures will have battery storage racks, with relay and communications systems for automated monitoring and management of the batteries to ensure design performance. A battery management system will be provided to control the charging/discharging of the batteries, along with temperature monitoring and control of the individual battery cell temperature with an integrated cooling system. Power inverters to convert between AC and DC, along with transformers to step up the voltage, will also be included; and

WHEREAS, in accordance with Section 17.36.020 of the City's Municipal Code ("Code"), a Development Plan Application is required for the construction of the Project; and

WHEREAS, in accordance with the provisions of the California Environmental Quality Act ("CEQA"), (Cal. Pub. Resources Code §§21000 *et seq.*), an initial study was performed, the result of which was the preparation and circulation of a mitigated negative declaration ("IS/MND") analyzing the proposed Project and concluding that the approval of the Project does not have a significant effect on the environment because the impacts of the Project could all be mitigated to levels below established CEQA thresholds of significance with the adoption of mitigation measures and enforcement of such measures through a Mitigation Monitoring and Reporting Program ("MMRP"); and

WHEREAS, the Notice of Availability and Notice of Intent to Adopt the IS/MND was published in the San Gabriel Valley Tribune newspaper on December 16, 2025, and the IS/MND was circulated for public and agency review and comment on December 16, 2025, through and including, January 5, 2025. Copies of the IS/MND were made available to the public at the City of Industry City Hall on December 16, 2025, and the IS/MND was distributed to interested parties and agencies; and

WHEREAS, on January 27, 2026, the Planning Commission conducted a duly noticed public hearing, and reviewed and carefully considered the information in the IS/MND and MMRP, and all testimony written and oral, and adopted Resolution No. PC 2026-01 recommending that the City Council approve the IS/MND and notice of determination regarding same, adopted Resolution No. PC 2026-02 recommending that the City Council approve Zoning Code Amendment No. 24-07, adopted Resolution No. PC 2026-03 recommending that the City Council approve Development Plan Application No. 24-09 for the development of the proposed BESS facility, adopted Resolution No. PC 2026-04 recommending that the City Council approve Conditional Use Permit No. 24-03 to allow the proposed BESS facility and recommended that the City Council approve Community Benefit Agreement No. 25-01; and

WHEREAS, notice of the City Council's public hearing on the Application was published in The San Gabriel Valley Tribune February 2, 2026, was mailed out to property

owners within 300 feet of the Project Site, and was posted at the Project Site and at City Hall Council Chambers, Fire Station 118, and the City's website on February 2, 2026; and

WHEREAS, on February 12, 2026, the City Council of the City of Industry conducted a duly noticed public hearing on the Application and considered all testimony written and oral; and

WHEREAS, all legal prerequisites prior to adoption of this Resolution have occurred.

NOW THEREFORE, the City Council of the City of Industry hereby finds, determines, and resolves as follows:

SECTION 1: The City Council finds that all the facts set forth in the Recitals above are true and correct and are incorporated herein by reference.

SECTION 2: All necessary public hearings and opportunities for public testimony and comment have been conducted in compliance with State law and the City's Code.

SECTION 3: Based upon substantial evidence presented to the City Council during the February 12, 2026, public hearing, including public testimony and written and oral staff reports, and which includes without limitation, CEQA, the CEQA Guidelines, the IS/MND, MMRP and the City's Code, and any documents provided by the public to the City Council at the February 12, 2026, public hearing, the City Council finds as follows:

(a) The proposed use is compatible with the goals and objectives of the General Plan, and any applicable redevelopment plan.

Per the City of Industry General Plan Land Use Element Table 1, the Employment land use designation is intended to provide for a full range of industrial uses that are acceptable within the community, but whose operations are more intensive and may have nuisance or hazardous characteristics, which for reasons of health, safety, environmental effects, or general welfare, are best segregated from other uses, and uses handling hazardous materials are permitted only with proper safeguards and a conditional use permit.

The proposed use and development are consistent with the General Plan Land Use Goal LU2 and Resource Management Goal RM2.

The Project is consistent with General Plan Policy LU2-6, which states the City should "[s]upport the use of energy-saving designs and equipment in all new development and rehabilitation or reconstruction projects." The BESS is expected to facilitate the integration of clean, renewable energy sources into the grid. Excess energy generated during off-peak hours can be stored and dispatched during peak demand, reducing the need to generate additional power from fossil fuels.

The Project addresses Resource Management Goal RM2 which recognizes the City's responsibility to participate in a regional effort to improve the air quality and reduce greenhouse gas emissions. The Project is consistent with General Plan Policy RM2-2, which states the City should "[s]upport efforts to reduce pollutants to meet State and Federal Clean Air Standards." The Project is consistent with this policy via its role in transitioning to renewable energy to reduce emissions of pollutants and greenhouse gasses. This transition will help support the SCE grid and the San Gabriel Valley region as a whole which includes the City of Industry and several of its businesses.

(b) The site is adequate in size, shape, topography and location for the proposed use and there will be adequate utilities to accommodate the proposed use.

The site is adequate in size, shape, topography and location for the proposed use and there will be adequate utilities to accommodate the proposed use. The redevelopment and proposed site improvements of the 9.2-acre site are adequate for the proposed equipment plus any additional features needed including onsite fire lanes meeting fire department requirements, setbacks, and landscaping to meet City requirements. The new development complies with the City's proposed applicable development standards relating to lot size, building height, setbacks, lot coverage, landscaping, and circulation. The site is served by all necessary utilities, including water, sewer, gas, and electric services, which will adequately supply the BESS site. The Project site is appropriate for the Project given that it is adjacent to the Walnut Substation where the need for battery support has been identified. The interconnection will be directly across the property line into the Walnut Substation so no new infrastructure will be needed on public property. Except for the Project's obtaining and returning electric power to the grid, the proposed use will have lower utility demand than existing conditions.

(c) There will be adequate street access, traffic circulation, and parking capacity for the proposed use.

There will be adequate street access, traffic circulation, and parking capacity for the proposed use. Gale Avenue is an existing improved street with pedestrian access from the sidewalk. Gale Avenue is adequate in width and pavement type to carry the traffic generated by the proposed use. Pursuant to Section 17.36.060.K.1.a. of the City's Code, the required number of parking spaces is based upon the square footage of the building which they are intended to serve and the use to which that building is to be put. The Project proposes a 1,200 square foot office/maintenance building. Per the Code, from 0-25,000 square feet of building area provided, one parking space per 500 square feet of floor area is required. This means the site requires a minimum of three parking stalls. The Applicant is proposing a total of five parking spaces, thereby exceeding, and complying with the City's parking requirement.

Also, pursuant to Chapter 17.25.050.N. of the City's Code, all driveways must be a minimum of twenty-six feet in width. Access to the Project Site is provided from three different 26-foot-wide driveways, two on Gale Avenue and one on Ward Way. The driveways provide access to the 26-foot-wide internal drive aisle. Aisles serving parking areas must be a minimum twenty-six feet in width. The Project is providing onsite, 26-foot-wide roads meeting fire department requirements and Code requirements while also designed for two-way circulation. The Property will be secured from public entry so only Project vehicles will be onsite.

(d) The proposed use is compatible with the surrounding properties and uses; in making this finding, consideration shall be given to the potential for changes in the uses of surrounding properties.

The use is compatible with the other existing land uses within the Industrial zone, an area that is already an active environment with industrial uses. The proposed Project has been designed to minimize impacts on surrounding development. Therefore, the proposed development respects the public concerns for the aesthetics of development and encourages the orderly and harmonious appearance of structures and property within the City.

The proposed project operations will generate little traffic so will not result in traffic interference with surrounding properties. The rail lines and Walnut Substation to the north and east of the Property are unoccupied infrastructure that would not be adversely affected. The proposed use will be part of the electric grid infrastructure consistent with the current use of the adjacent Walnut Substation. To the south, Gale Avenue and frontage setback requirements provide a 100-foot separation distance from the nearest residential structures, which complies with Building and Fire Codes.

Although industrial and residential uses serve different functions and are not inherently compatible, the City's land use framework and permitting requirements are specifically designed to manage this separation and ensure safe operation and compatibility. The Project will be designed and constructed to comply with all applicable codes in effect in the City including NFPA Standards, National Electrical Code, and California Fire Code. The Project will be constructed to meet all Los Angeles County Fire Department requirements including gate access, onsite road design, fire hydrants, and other fire safety requirements. A reinforced concrete safety and security wall will be provided around the BESS perimeter. The wall will be designed to withstand a potential fire, pressure wave, and debris projectiles from a potential explosion. A health risk assessment was prepared that shows that even in the unexpected event of a battery container fire, emission would not be expected to pose a significant health risk. NFPA 855 standards are designed specifically to reduce risks for electric energy storage facilities including BESSs. Enclosures will be equipped with fire prevention, detection, and isolation methods and materials. At a minimum, this would include smoke/fire detection sensors; ground fault detection, alarms, and systems for automatic shutdown of cooling fans

and opening of electrical contacts in the battery system. Containers will be spaced in accordance with NFPA 855 requirements designed to minimize risk of a fire spreading to adjacent containers. NFPA 855 also will require comprehensive safety planning submittals to LA County Fire including results of bench-scale fire and explosion testing by the manufacturer and hazard mitigation analysis for the specific type of battery used, and an Emergency Response Plan designed to ensure well-planned, prompt, safe, and appropriate response in the event of an emergency. These submittals will be made to the Fire Department prior to issuance of building permits. NFPA 855 additionally mandates initial and annual refresher training for facility staff, and Marici Project, LLC will coordinate with the Fire Department to facilitate site-specific Fire Department staff training. Given the design, safety, and emergency response requirements for BESS systems, worker and emergency responder training requirements, and the absence of public access to the facility, the Project is not expected to have any adverse impact on worker or public health and safety.

(e) The proposed use will not be detrimental to the public health, safety, or general welfare.

The proposed use will not be detrimental to the public health, safety, or general welfare, and will provide a substantial benefit due to its role in contributing toward reducing pollutant and greenhouse gas emissions and climate change. The proposed use will contribute to these benefits by providing additional capacity to store energy generated by intermittent renewable energy sources. The Project will not generate wastewater other than negligible quantities of sanitary wastewater water to be discharged to the sanitary sewer. Emissions into the air from routine operations will be negligible and considering the Project's role in reducing reliance on fossil fuel generated power, can be expected to result in an overall reduction in emissions of pollutants and greenhouse gases. The Property is in an existing urban area in the Industrial zone and will not impact any important habitat or other natural resource important to public health or welfare due to the existing disturbance. Construction and operations will be required to occur within the limits of existing laws and regulations for pollution prevention and safety. Furthermore, the City’s building permit process and LA County Fire Department (LACoFD) permit process ensures that the proposed Project is built in accordance with all City, County, and State standards, thus protecting the public health, safety, and welfare. The potential for catastrophic events (such as a fire, structural failure, or natural hazards) is specifically addressed through the City’s building permit process and the LACoFD permit process. These reviews require compliance with applicable Building Code and Fire Code provisions, which are expressly designed to mitigate risks associated with worst-case and emergency scenarios, including impacts to surrounding uses including the residential uses.

Conditions are included in the conditions of approval, attached hereto as Attachment 1 and incorporated herein by reference, and serve to safeguard and help protect the surrounding area including the residential to the south of the

Property, which include, without limitation an explosion-hazard early warning detection and notification system and explosion-hazard shielding methods which are set forth in the full in the conditions of approval.

The site layout of the BESS units, in accordance with the Fire Code, will be required to have separation distances between BESS units, enclosures, and groups of BESS units/enclosures, and setback distances from sensitive exposures called out by the Fire Code (e.g., combustibles, hazardous materials), shall be validated by large-scale fire testing or modeling, as specified and approved by LACoFD.

Building and fire safety standards incorporate requirements related to structural integrity, fire resistance, emergency access, and life safety systems. Compliance with these standards reduces the likelihood and severity of catastrophic events and limits the potential for off-site impacts, including effects on adjacent residential properties. Therefore, it has been determined that the Project is not detrimental to the public health, safety, or welfare, and will not have adverse effects upon neighboring properties.

SECTION 4: Based on the foregoing, the City Council approves Conditional Use Permit No. 24-03 subject to the Conditions of Approval, attached hereto as Attachment 1, and incorporated herein by reference, subject to the approval and effective date of Ordinance No. 841.

SECTION 5: The provisions of this Resolution are severable and if any provision, clause, sentence, word, or part thereof is held illegal, invalid, unconstitutional, or inapplicable to any person or circumstances, such illegality, invalidity, unconstitutionality, or inapplicability shall not affect or impair any of the remaining provisions, clauses, sentences, sections, words, or parts thereof of the Resolution or their applicability to other persons or circumstances.

SECTION 6: The City Clerk shall certify the adoption of this Resolution and the same shall be in full force and effect, upon the effective date of Ordinance No. 841.

PASSED, APPROVED AND ADOPTED by the City Council of the City of Industry at a regular meeting held on February 12, 2026, by the following vote:

AYES: COUNCIL MEMBERS:

NOES: COUNCIL MEMBERS:

ABSTAIN: COUNCIL MEMBERS:

ABSENT: COUNCIL MEMBERS:

Cory C. Moss, Mayor

ATTEST:

Julie Gutierrez-Robles, City Clerk

Attachment 1

Conditions of Approval – CUP 24-03

CITY OF INDUSTRY

ATTACHMENT 1

Standard Requirements and Conditions of Approval

Application: **Conditional Use Permit 24-03**

Applicant: **Marici Project LLC**

Location: **16233,16207, and 16253 Gale Avenue, (APN 8242-016-033, -034, -044, and -061) City of Industry**

Proposed Use: **A Battery Energy Storage System (BESS) facility and associated site and infrastructure improvements.**

PLANNING DIVISION

Conditional Use Permit Conditions

1. Approval of this Conditional Use Permit (CUP) request shall apply only to the subject project and shall not waive compliance with all sections of the Zoning Ordinance, and all other applicable City Ordinances in effect at the same time as Building Permit Issuance. The approved use is a new for a Battery Energy Storage System Facility, and for no other use.

2. The conditions for the Project shall remain in effect for the life of the subject property and shall run with the land and be binding upon future owners, successors, heirs, and transferees of the current property owner who is represented on the stamped approved plans on file in the Development Services Department. Any substantial changes to the approved plans must be approved by the Director of Development Services and may require approval of the Planning Commission and/or City Council if the Director of Development Services finds that the proposed changes do not substantially conform to approved plans.

3. The Applicant and Property Owner shall file an executed and acknowledged Acceptance of Terms and Conditions of the Conditional Use Permit within 10 days after the approval of said entitlement. The Applicant and Property Owner understand and agree that approval of the Resolution and Conditional Use Permit will be of no force or effect unless such written consent is submitted to the City within the stated 10-day period.

4. Pursuant to Section 17.04.100 of the City's Code, if the use for which this CUP was granted is discontinued for a period of 180 days or more, such use shall not be re-established, and the matter may be referred to the Planning Commission to initiate the proceedings for the revocation of this CUP.

5. Noncompliance with any Condition of Approval shall constitute a violation of the City's Code. Violations may be enforced in accordance with the provisions of Title 17 of the City's Code,

and any other applicable ordinance, rule, or law.

6. Current and future property owners, business managers, operators, successors, assigns, etc. shall be responsible for ensuring and complying with all conditions of approval contained herein.

7. The Applicant and/or successor in interest shall comply with all Federal, State, County, and local laws, rules, and ordinances.

8. The Applicant shall operate in accordance with approved plans and specifications on file with the City of Industry Planning Department and shall be in compliance with all conditions of approval of Conditional Use Permit No. CUP-24-03, as approved by the City Council.

9. Development shall adhere to all Mitigation Measures identified in the adopted Mitigation Monitoring and Reporting Program (MMRP), made a part of the Mitigated Negative Declaration (SCH# 2025120872) associated with the project in compliance with the California Environmental Quality Act (CEQA).

10. Prior to the issuance of any permits related to the Project, the Applicant shall enter into a Community Benefit Agreement with the City, and shall comply with all terms and conditions therein.

11. Prior to operation of the use/business approved by the CUP, the Applicant shall contact the Planning Department and schedule a final inspection. The Planning Department will inspect the premises to ensure compliance with all approved conditions of approval and requirements.

12. These conditions of approval shall be posted on-site and acknowledged by all management of the business and the property owner. It shall be the applicant/business owner's responsibility to provide these records to the City of Industry Planning Department upon request.

13. Upon the one (1) year anniversary of approval of the CUP, staff shall bring back the CUP for review and evaluation by the Planning Commission of the Applicant/Owner's operation of the facility, which may include the modification of any existing condition of approval and/or the incorporation of any new conditions.

Business Operations

14. All current and future business owners shall have a valid business license to operate the BESS.

15. Expansion of use beyond the scope and nature described in this Conditional Use Permit No. 24-03, which would increase the projected scale of operations, is not permitted except upon application for and approval of modification to this Conditional Use Permit.

16. Adequate litter receptacles shall be provided both in and outside the building. All litter shall be removed from the exterior areas around the building as required and no less frequently than once each day this business is open.

17. The hours of operation shall be seven days a week 24 hours a day.

18. The applicant shall not block out or tint any of the tenant building windows at any time. All windows should be clear and always remain translucent to the satisfaction of the Planning Department.

19. An alarm system must be installed and always maintained. The business shall provide the LA County Fire Department's, Sheriff's Department, and the City with contact information and post an alarm company contact number outside of the business in a conspicuous location.

20. The operator of the business shall be responsible for insuring that a video surveillance system on the premises complies with the following minimum standards: a. Visually records and monitors the parking lot area, all entrance(s), and exit(s). b. The surveillance system and recording device shall be in continuous operation during business hours. c. The videotape, DVD, CD, or hard drive data shall be saved for a period of thirty (30) days and shall be available for review by law enforcement personnel, and/or the City.

21. The parking lot on the premises shall be equipped with lighting of sufficient power to illuminate and make easily discernible the appearance and conduct of all persons on or about the parking lot.

22. Electronic gates should be equipped with a Knox electric switch and an alternative energy back-up system, such as a generator or battery, which would allow operation of the security gate(s) during an electrical power outage. Access through the gates shall be provided for both the Los Angeles County Fire and Sheriff Departments. The location of Knox boxes shall be shown on the building plans and approved by both the Los Angeles County Fire Department and the Los Angeles County Sheriff Department

23. Decommissioning Plan. Prior to Certificate of Occupancy, the applicant shall submit a Decommissioning Plan which shall be reviewed and approved by the City and the Los Angeles County Fire Department, and other agencies as may be required. The Decommissioning Plan shall include all of the following:

    i. A narrative description of the activities to be accomplished, including who will perform that activity and at what point in time following the closure of the facility, for complete physical removal of all battery energy storage system components, structures, equipment, security barriers, and transmission lines from the site;

    ii. Disposing of all solid and hazardous waste in accordance with local, state, and federal waste disposal regulations;

    iii. The anticipated life of the battery energy storage system;

    iv. The manner in which the battery energy storage system will be decommissioned, and

the site restored to a condition reasonably similar to its original state, including a description of how any changes to the surrounding areas and other systems adjacent to the battery energy storage system, such as, but not limited to, structural elements, building penetrations, means of egress, and required fire detection suppression systems, will be protected during decommissioning and confirmed as being acceptable after the system is removed; and

v. A listing of any contingencies for removing an intact operational battery energy storage system from service, and for removing a battery energy storage system from service that has been damaged by a fire or other event.

Fire Department Requirements

24. Before any permit is issued, besides those allowed by the building department to be at risk, the applicant shall submit and obtain approval from the Los Angeles County Fire Department (LACoFD) of all facility and equipment plans subject to LACoFD authority. These plans shall include but not be limited to any necessary requests for variance(s) from the default prescriptive requirements of the Los Angeles County Fire Code [i.e., requests to "use an alternate material, assembly of materials, equipment, method of construction, method of installation of equipment or means of protection" from that which is prescribed by the codes and standards to be the default requirement. Said approvals from the LACoFD shall be obtained from the LACoFD, specifically the Engineering Section of the fire Prevention Division, and bear the signature of the LACoFD Fire Marshal

25. An Explosion-Hazard Early Warning Detection and Notification shall be required. Where the chemistry or design of the ESS, or battery ESS (BESS, or electrochemical ESS), is capable, during normal or failure modes, of creating an explosive atmosphere of consequence within the airspace of its battery compartment, room, or other enclosure (whether a full-volume or partial-volume explosive atmosphere)

    a. Early warning detection and notification via a fire-alarm system compliant with the Los Angeles County Fire Code and the NFPA-72 standard shall be designed with detection inside each battery compartment to effectively provide advanced warning of any accumulation towards an explosive limit of flammable/explosive gases, in accordance with the Los Angeles County Fire Code.

    b. These detection devices shall be addressable.

    c. Automatic notification serving potential impact areas via on-site sets of horns, beacons (red or orange), and signs, shall be provided as determined by LACoFD.

    d. Automatic notification by the fire-alarm system shall be made to 9-1-1 as determined by LACoFD.

    e. On-site identification of the particular enclosure(s) in alarm shall be achieved via horn-strobe notification device(s).

    f. Gas detection systems, including any that are used to initiate an explosion-control system, shall comply with the requirements of NFPA 72 and be supervised by the fire-alarm system

26. An Explosion-Hazard Shielding shall be included requiring that the maximum-potential explosion-hazard consequences, including pressure-wave generation and projectile/shrapnel impact, for a battery-failure gas-accumulation scenario not less-severe than the scenario defined by the LACoFD, shall be established by a qualified third party and subject to approval by the LACoFD.

    a. Based on the maximum-potential explosion-hazard results, an explosion-shielding wall that is engineered to provide protection from one such maximum-potential explosion occurrence, for the closest BESS enclosure thereto, for each BESS enclosure to be installed, shall be provided:

        i. Around the entire BESS-installation perimeter of the BESS installation(s) or BESS field as a whole, to protect persons outside the facility; and

        ii. As a shield for four persons operating at each required first-responder/fire-command station for these installations.

    b. The height of these perimeter walls shall be a minimum height of 10 feet or exceed the height of the BESS enclosures by at least 18 inches, and shall in no case be less than any minimum height requirement set therefor by the jurisdictional planning agency.

    c. Install a vehicular gate for fire apparatus access within the Project site providing an emergency vehicle access route. The vehicular gate shall provide a minimum unobstructed width of 26 feet or greater to accommodate for the fire apparatus turning radii and maneuvering ability to adjoining fire lanes. This gate shall be identified as Emergency Vehicle Access, meeting the design criteria as any other gates, and remain locked with an approved Fire Department locking device.

    d. Fire apparatus access road gates through the wall shall be compliant with the Los Angeles County Fire Code, including Section 503 thereof and provide sufficient protection.

27. The site layout of the BESS units, in accordance with the Fire Code, will be required to have separation distances between BESS units, enclosures, and groups of BESS units/enclosures, and setback distances from sensitive exposures called out by the Fire Code (e.g., combustibles, hazardous materials), shall be validated by large-scale fire testing or modeling, as specified and approved by LACoFD.

Code Requirements and Standards

The following is a list of Municipal Code requirements and standards deemed applicable to the proposed project. The list is intended to assist the applicant by identifying requirements that must be satisfied during the various stages of project permitting, implementation, and operation. It should be noted that this list is in addition to any "conditions of approval" adopted by the Planning Commission and noted above. Please note that if the design of your project or site conditions changes, the list may also change. If you have any questions regarding these requirements, please contact the City of Industry.

28. The entire property is subject to inspection by the Los Angeles County Sheriff's Department and/or City representative at any reasonable time without prior notification.

29. Off-street parking shall always be provided in accordance with the originally approved site plan and shall be maintained in a clean and attractive manner (trash, litter, or other materials shall be removed regularly).

30. All landscaped areas shall be maintained in accordance with the originally approved landscaping plan, in a healthy and well-kept condition, and kept weed free.

31. All trash containers shall be kept inside a building or in a designated trash enclosure.

32. Emergency fire facilities (hydrants) shall always be kept free and unobstructed.

33. No outside storage of any private property, building materials, or other property not permanently affixed to the real property shall be allowed, unless approved by the Planning Department.

34. No outside display of goods, wares, or merchandise shall be permitted, unless approved by the Planning Department.

35. Any graffiti painted or marked upon the premises or any adjacent area under the control of the permittee shall be removed or painted over within 72 hours of being applied.

36. Adequate lighting will always be provided in the parking areas in accordance with the originally approved site plan.

37. The City must approve all signs, banners, pennants, flags or other outside advertising materials or structures.

38. The applicant is responsible for acquainting all employees with these rules and all local, county, state, or federal laws.

39. Any violation of these conditions or any local, county, state or federal laws may constitute grounds for revocation or suspension of the CUP.

40. All perimeter walls, fencing, and common areas shall be maintained by the Property Owner.

Interpretation and Enforcement

41. The Applicant shall comply with all applicable Code requirements, conditions of approval, laws, rules, and regulations applicable to the development of the project.

42. The Planning Department may interpret the implementation of each condition of approval and, with advanced notice, grant minor amendments to approved plans and/or conditions of approval based on changed circumstances, added information, and/or relevant factors if the spirit and intent of the approved condition of approval is satisfied. Permits shall not be issued until the proposed minor amendment has been reviewed and approved for conformance with the intent of the approved condition of approval. If the proposed changes are substantial in nature, an amendment to the original entitlement may be required pursuant to the provisions of the Industry Municipal Code.

43. The Planning Department, Engineering Department, and contract agencies (Los Angeles County Fire Department, Los Angeles Department of Building and Safety) shall be responsible for ensuring compliance with all applicable code requirements and conditions of approval.

44. If the Planning Department finds evidence that conditions of approval have not been fulfilled or the use has resulted in a substantial adverse effect on the health and/or general welfare of uses of adjacent or proximate property or have a substantial adverse impact on public facilities or services, the Planning Department may refer CUP No. 24-03 back to the Planning Commission for review. If, upon review of the matter, the Planning Commission finds that any of the results above have occurred, the Planning Commission may modify or revoke CUP No. 24-03.

Indemnification

45. The Applicant and any of its heirs, successors and assigns, shall defend, indemnify, and hold harmless the City and its elected officials, officers, employees, agents, and volunteers ("City Indemnitees") from any claim, action or proceedings, liability cost, including attorneys' fees and costs against the City Indemnitees, caused or alleged to have been caused by reason of the Applicant's activities in connection with CUP No. 24-03. This indemnity provision applies to all damages and claims for damages, as described above, regardless of whether the City prepared, supplied, or approved the plans, specifications, or other documents for CUP No. 24-03.

In the event of any legal action challenging the validity, applicability, or interpretation of any provision of this approval, including the environmental review, or any other supporting document relating to CUP No. 24-03, the Applicant and its successors and assigns, shall indemnify, defend and hold harmless the City Indemnitees, and each of them, with respect to all liability, costs and expenses incurred by, and/or awarded against, the City Indemnitees in relation to such action. The City shall have the right to select counsel of its choice.

The City shall promptly notify Applicant of any claim, action or proceeding, and shall cooperate fully in the defense thereof.

END OF CONDITIONS

COMMUNITY BENEFIT AGREEMENT

This Community Benefit Agreement ("Agreement") is made and entered into as of _____, 2026 ("Effective Date") by and between the City of Industry, a California municipal corporation ("City") and Marici Project LLC, a Delaware limited liability company ("Developer"). City and Developer are sometimes referred to as "Party" or collectively as the "Parties" herein.

RECITALS

WHEREAS, Developer holds real property rights to certain property located at 16207, 16233, and 16253 Gale Avenue, City of Industry, California ("Property"), and proposes to construct an approximately 400 Megawatt ("MW") battery energy storage system ("BESS") facility on the Property, with an interconnection the Southern California Edison ("SCE") grid, via property located at 16333 Gale Avenue, City of Industry, California. The construction of the BESS facility along with the interconnection facilities to the point of change of ownership, as further described in the City's Mitigated Negative Declaration are collectively the "Project"; and

WHEREAS, Developer submitted an application for the Project, which includes a zoning code text amendment to permit BESS facilities in the City's Industrial Zone, a Development Plan application, and a conditional use permit (collectively the "Application"); and

WHEREAS, pursuant to Sections 17.16.010.A. and 17.50.050 of the City's Code, BESS facilities are permitted in the City's Industrial Zone upon approval of conditional use permit, design review, and a community benefit agreement; and

WHEREAS, in connection with its review and approval of the Project, the City prepared a Mitigated Negative Declaration ("MND") pursuant to applicable provisions of the California Environmental Quality Act and its implementing regulations ("CEQA") for approval of this Agreement, and the Application (collectively the "City Approvals"); and

WHEREAS, the City Council reviewed and carefully considered the information in the MND, including all comment letters submitted, and made the findings set forth therein, and on INSERT DATE, adopted Resolution No. XX-XX, adopting the MND with comments incorporated, as an objective document that reflects the independent judgment and analysis of the City in the discussion of the Project's environmental impacts; and

WHEREAS, Developer and City have negotiated this Agreement pursuant to which Developer will provide certain benefits to the City and community in connection with the development and construction of the Project.

NOW, THEREFORE, for and in consideration of the mutual covenants and conditions herein contained, the City and Developer agree as follows:

1. PROJECT. Developer may construct and install, or have constructed and installed at its own cost, expense and liability, the Project. Construction of the Project shall be in accordance with the provisions of the City Approvals.

2. TERM. The term of this Agreement shall commence on the Effective Date, and shall continue in full force and effect until the Project is deemed decommissioned by the City.

3. COMMUNITY BENEFIT.

a. Community Benefit Fee. Within thirty (30) days after the City's issuance of the first building permit for the Project, Developer shall make a one-time cash payment to the City in the amount of Two Million Dollars ($2,000,000.00). Upon completion of final inspections by the City, City shall provide notice to Developer within five business days. Developer shall then remit a one-time cash payment to the City in the amount of Four Million Dollars ($4,000,000.00) prior to the City's issuance of the final certificate of occupancy for the Project, which the City shall issue within two (2) business days after receipt of payment from Developer. Developer is informed that the City has the discretion to use Developer's payment for future benefits of the City overall.

b. Fire Safety. Developer shall comply with all conditions and/or training requirements imposed by the Los Angeles County Fire Department, as set forth in the conditions approved for the Project, and all applicable laws in effect at the time the first building permit for the Project is issued.

c. **Sales and Use Tax.** Consistent with the provisions of applicable California law, Developer shall use commercially reasonable efforts to maximize the total amount of all Sales and Use Tax Revenue received by the City from development, construction, and maintenance of the Project, for the purchase, sale or use of any and all materials, equipment, fixtures or other items upon which sales or use tax is due, including any and all sales or use tax due from any third party vendors or other contractors involved in the development and construction of the Project pursuant to the terms and conditions of a contractual agreement with Developer or its contractors ("Project Sales and Use Tax Revenue"). It is anticipated the City will receive a total of at least Three Million Dollars $3,000,000.00 in Project Sales and Use Tax Revenue. At the end of the first full City fiscal year following completion of the Project to its operational stage connected to the electrical grid and following City issuance of a final certificate of occupancy, once the data is available the City shall provide Developer with an accounting, identifying the amount of all Project Sales and Use Tax Revenue received in relation to the Project, including funds received in preceding City fiscal years prior to completion of the Project as applicable. If the City determines that amount of Project Sales and Use Tax Revenue received by the City is less than Three Million Dollars $3,000,000.00, the City shall invoice Developer for the difference (i.e., Three Million Dollars $3,000,000.00 *less* the amount of Project Sales and Use Tax Revenue actually received) and provide Developer with the information relied upon by the City in making such determination (to the extent such disclosure is not prohibited by law). Developer shall have thirty (30) days to remit payment to the City.

Developer shall timely report and pay all sales and use taxes relating to the Project in accordance with the laws, rules and regulations applicable to such payment.

Upon City request, once the data is available, Developer shall supply a list of tax-paying contractors and vendors for the Project to assist the City with tracking Project Sales and Use Tax Revenue.

For purposes of this Agreement, the term "Sales and Use Tax Revenue" shall have the same meaning as set forth in Chapter 3.20 of the City's Municipal Code.

4. ANNUAL REVIEW. At least once during every twelve (12) month period of the Term, City shall review the good faith compliance of Developer with the terms of this Agreement.

5. INDEMNIFICATION. Developer shall indemnify, defend, and hold harmless the City, and any and all of its employees, officials and agents from and against any liability (including liability for claims, suits, actions, arbitration proceedings, administrative proceedings, regulatory proceedings, losses, expenses or costs of any kind, whether actual, alleged or threatened, including judgments, legal counsel fees and costs, court costs, interest, defense costs, and expert witness fees), where the same arise out of, are a consequence of, or are in any way attributable to, in whole or in part, the City's approval of the Project including any environmental review, Developer's work on the Project, or Developer's performance under this Agreement. Said indemnity by Developer shall extend to any individual or agency for which Developer is legally liable, including but not limited to, officers, agents, employees, or contractors of Developer. The terms of this Section shall survive the termination of this Agreement.

6. NOTICES. Any notices which either Party may desire to give to the other Party under this Agreement must be in writing and may be given either by (i) personal service, (ii) delivery by a reputable document delivery service, such as but not limited to, Federal Express, which provides a receipt showing date and time of delivery, or (iii) mailing in the United States Mail, certified mail, postage prepaid, return receipt requested, addressed to the address of the party as set forth below or at any other address as that party may later designate by notice:

7. ASSIGNMENT. Developer shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without prior written consent of City, except to an affiliate of Developer. Provided however, that Developer may make such assignments as the Developer deems necessary for collateral security purposes to aid in providing financing for the Project, without written consent of City. Any other attempts to assign this Agreement or any interest herein without prior written consent of City shall be null and void, and any assignee, hypothecatee, or transferee shall acquire no right or interest by reason of such attempted assignment, hypothecation or transfer. The City shall not withhold such approval if Developer's successor entity provides reasonably satisfactory evidence to City that it possesses the financial resources equivalent or superior to those of Developer to meet the obligations in this Agreement. Upon an assignment as allowed in this Section, Developer shall be released from its obligations under this Agreement, provided that assignee shall commit in writing to assume Developer's obligations under this Agreement.

8. GOVERNING LAW AND VENUE. City and Developer understand and agree that the laws of the State of California shall govern the rights, obligations, duties, and liabilities of the Parties to this Agreement and also govern the interpretation of this Agreement. Any litigation concerning this Agreement shall take place in the municipal, superior, or federal district court in Los Angeles County, California. If any action at law or suit in equity is brought to enforce or interpret the provisions of this Agreement, or arising out of or relating to City's or Developer's obligations under, or performance of this Agreement, the prevailing party shall be entitled to reasonable attorneys' fees and all related costs, including costs of expert witnesses and consultants, as well as costs on appeal, in addition to any other relief to which it may be entitled.

9. RELATIONSHIP OF THE PARTIES. The Parties hereby mutually agree that neither this Agreement, nor any other related entitlement, permit, or approval issued by the City shall operate to create the relationship of partnership, joint venture, or agency between the City and Developer. Developer's contractors and subcontractors are exclusively and solely under the control and dominion of Developer. Nothing herein shall be deemed to make Developer or its contractors an agent or contractor of the City.

10. BINDING EFFECT. Each and all of the covenants and conditions herein shall be binding on and shall inure to the benefit of the Parties, and their successors, heirs, personal representatives, or assigns.

11. NO THIRD PARTY BENEFICIARIES. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

12. ENTIRE AGREEMENT. This Agreement contains the entire understanding between the Parties relating to the obligations of the Parties described in this Agreement. All prior or contemporaneous agreements, understandings, representations, and statements, oral or written and pertaining to the subject of this Agreement or with respect to the terms and conditions of this

Agreement, are merged into this Agreement and shall be of no further force or effect. Each Party is entering into this Agreement based solely upon the representations set forth herein and upon each Party's own independent investigation of any and all facts such party deems material.

13. AMENDMENT/MODIFICATION. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

14. SEVERABILITY. If any term or provision of this Agreement or the application thereof to any person or circumstance shall, to any extent, be invalid or unenforceable, then such term or provision shall be amended to, and solely to, the extent necessary to cure such invalidity or unenforceability, and in its amended form shall be enforceable. In such event, the remainder of this Agreement, or the application of such term or provision to persons or circumstances other than those as to which it is held invalid or unenforceable, shall not be affected thereby, and each term and provision of this Agreement shall be valid and be enforced to the fullest extent permitted by law.

15. COUNTERPARTS. This Agreement may be executed in multiple counterparts, each of which shall be deemed an original, but all of which taken together shall constitute one and the same instrument.

16. CAPTIONS. The captions appearing at the commencement of the sections hereof, and in any paragraph thereof, are descriptive only and shall have no significance in the interpretation of this Agreement.

17. WAIVER. The waiver by City of Developer of any breach of any term, covenant or condition herein contained shall not be deemed to be a waiver of such term, covenant or condition or of any subsequent breach of the same or any other term, covenant or condition herein contained. No term, covenant or condition of this Agreement shall be deemed to have been waived by City or Developer unless in writing.

18. REMEDIES. Each right, power and remedy provided for herein or now or hereafter existing at law, in equity, by statute, or otherwise shall be cumulative and shall be in addition to every other right, power, or remedy provided for herein or now or hereafter existing at law, in equity, by statute, or otherwise. The exercise, the commencement of the exercise, or the forbearance of the exercise by any Party of any one or more of such rights, powers or remedies shall not preclude the simultaneous or later exercise by such party of any of all of such other rights, powers or remedies.

19. AUTHORITY TO EXECUTE THIS AGREEMENT. The person or persons executing this Agreement on behalf of Developer and City represent and warrant that he/she has the authority to execute this Agreement on behalf of the Party and has the authority to bind the Party to the performance of its obligations hereunder.

20. EFFECTIVE DATE. This Agreement is not a commitment by the City to approve the Project. This Agreement shall have no force or effect unless and until the Project is approved, following compliance with CEQA, and all appeal periods for the City Approvals have expired.

(*Signature Page to Follow*)

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed as of the Effective Date.
